American Energy, Imperiled Coast Jason P. Theriot, 2014-04-14 In the post World War II era Louisiana s coastal wetlands underwent an industrial transformation that placed the region at the center of America s energy producing corridor By the twenty first century the Louisiana Gulf Coast supplied nearly one third of America s oil and gas accounted for half of the country s refining capacity and contributed billions of dollars to the U S economy Today thousands of miles of pipelines and related infrastructure link the state s coast to oil and gas consumers nationwide During the course of this historic development however the dredging of pipeline canals accelerated coastal erosion Currently 80 percent of the United States wetland loss occurs on Louisiana s coast despite the fact that the state is home to only 40 percent of the nation s wetland acreage making evident the enormous unintended environmental cost associated with producing energy from the Gulf Coast In *American Energy Imperiled Coast* Jason P Theriot explores the tension between oil and gas development and the land loss crisis in Louisiana His book offers an engaging analysis of both the impressive albeit ecologically destructive engineering feats that characterized industrial growth in the region and the mounting environmental problems that threaten south Louisiana s communities culture and working coast As a historian and

coastal Louisiana native Theriot explains how pipeline technology enabled the expansion of oil and gas delivery examining previously unseen photographs and company records and traces the industry's far reaching environmental footprint in the wetlands Through detailed research presented in a lively and accessible narrative Theriot pieces together decades of political economic social and cultural undertakings that clashed in the 1980s and 1990s when local citizens scientists politicians environmental groups and oil and gas interests began fighting over the causes and consequences of coastal land loss The mission to restore coastal Louisiana ultimately collided with the perceived economic necessity of expanding offshore oil and gas development at the turn of the twenty first century Theriot's book bridges the gap between these competing objectives From the discovery of oil and gas below the marshes around coastal salt domes in the 1920s and 1930s to the emergence of environmental sciences and policy reforms in the 1970s to the vast repercussions of the BP Deepwater Horizon oil spill in 2010 American Energy Imperiled Coast ultimately reveals that the natural and man made forces responsible for rapid environmental change in Louisiana's wetlands over the past century can only be harnessed through collaboration between public and private entities

The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a brilliant and suspenseful novel that will keep you wondering until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
