Geochemistry and Conversion of Oil Shales C.E. Snape, 2012-12-06 Oil shales are broadly dermed as petroleum source rocks containing sufficiently high contents of organic matter above ca 10 15 wt % to make utilisation a possibility Like coal the world s reserves of oil shales are vast being many times larger than those proven for crude oil Indeed some of the largest deposits occur in the USA and Europe where Estonia and Turkey have large reserves The first recorded interest in oil shale retorting was an English patent in 1694 EeLe Hancock and Porter No 330 which refers to distilling noyle from some kind of stone The oil shale retorting industry dates back to the middle of the last century notably Scotland Estonia France and Sweden in Europe Indeed my own Department at the University of Strathclyde has a historical link with James Paraffin Young the founder of the Scottish oil shale industry who endowed a chair in Applied Chemistry The growth of the oil industry saw the demise of the oil shale industry in most countries with the notable exception of Estonia where kukersite has continued to be used for power generation and retorting However oil shale utilisation has attracted renewed attention since the early 1970s as a source of transport fuels and chemical feedstocks due to the the long term uncertainties over crude oil supplies

Abbey in the Eifel Mountains FRO provided the appropriate setting for a conclave of some 80 specialists from the various walks of the field who during the week of Sept 19 23 1988 strived hard to define the state of the art in the principal segments of this Earth Science frontier The following pages contain the essence of the conference transactions giving a vivid cross section of the activities pursued by IOCP Project 157 during its final years The coverage of topics is not necessarily complete but rather eclectic in part With regard to single papers dealing with modern analogues of ancient processes the book title might even be considered a grave misnomer Nevertheless all contributions relate to the subject in the widest sense and the reader should be reminded that much of the heterogeneity reflected by the volume derives from the fact that it is primarily a research report from a highly interdisciplinary field rather than a textbook

Methods in Lignin Chemistry Stephen Y. Lin, Carlton W. Dence, 2012-12-06 The structural complexity of lignin has continually challenged the ingenuity of researchers to develop suitable methods for its characterization prior to and following a wide variety of chemical biological and physical treatments Initially activity along these lines was fueled by a desire to interpret technical delignification Le pulping processes in terms of accompanying structural changes in the lignin Subsequently increasingly wide ranging in depth investigations on the structure and reactivity of lignin exposed the inadequacy of many of the methods currently in use and underscored the ever continuing need to develop new methods capable of solving the unique analytical problems associated with lignin Characteristically such methods should be selective sensitive suitable for quantitative measurements and capable of being applied directly to and without destruction of the lignin or lignocellulose sample One notable example of the headway being made in reaching this objective is the relatively recent development and refinement of methods based on the use of sophisticated instrumentation e.g. ^1H and ^{13}C NMR spectroscopy Although the utility of many of these and other recently developed methods described in this book has yet to be fully and satisfactorily exploited we believe that progress already made in this direction will continue and most likely accelerate The decision to produce this book was prompted mainly by the acknowledged need for an up to date single source compilation of lignin methodology Hitherto this need was in part satisfied by B L **Energy Research Abstracts**, 1977 Semiannual with semiannual and annual indexes References to all scientific and technical literature coming from DOE its laboratories energy centers and contractors Includes all works deriving from DOE other related government sponsored information and foreign nonnuclear information Arranged under 39 categories e.g. Biomedical sciences basic studies Biomedical sciences applied studies Health and safety and Fusion energy Entry gives bibliographical information and
