

# Sunspots history

- Early observations have been recorded by Asian astronomers (-28 BC) and in Europe in the 'modern Age' then in 1611 in details par Christoph Scheiner and Galileo in 1612 with his astronomical telescope.
- The astronomical Observatory of Zurich continue to observe and records these sunspots.
- The sunspot itself can be divided into two parts:
  - The central umbra, which is the darkest part, where the magnetic field is approximately vertical (normal to the sun's surface).
  - The surrounding penumbra, which is lighter, where the magnetic field lines are more inclined.
