Magnetospheric Research with Advanced Techniques R.L. Xu, A.T.Y. Lui, 1998-09-23 Launches of several major magnetospheric research satellites i.e. Polar Wind and Interball set the scene for extensive multi platform investigations of the Earth's plasma environment in the era of the International Solar Terrestrial Physics Program Exciting new results from this Program and the ongoing innovative advances to scientific instrumentation and spacecraft technology are vitally important for the international space community in preparing for future plans in the upcoming new millennium This volume is a product of the COSPAR Colloquium held in Beijing on April 15-19 1996 aimed to consolidate these achievements It contains state of the art articles in the four areas of modern magnetospheric techniques namely 1 active experiment in space 2 innovative measurement technique 3 multi point observation and 4 numerical simulation and theoretical analysis

Researchers in the space community both novices and experts are expected to benefit from this collection of articles *The British National Bibliography* Arthur James Wells, 2003 Subject Guide to Books in Print, 1993 **Books in Print**, 1981

William Liu, Masaki Fujimoto, 2016-08-23 Despite the plethora of monographs published in recent years few cover recent progress in magnetospheric physics in broad areas of research While a topical focus is important to in depth views at a problem a broad overview of our field is also needed The volume answers to the latter need With the collection of articles written by leading scientists the contributions contained in the book describe latest research results in solar wind magnetosphere interaction magnetospheric substorms magnetosphere ionosphere coupling transport phenomena in the plasma sheet wave and particle dynamics in the ring current and radiation belts and extra terrestrial magnetospheric systems In addition to its breadth and timeliness the book highlights innovative methods and techniques to study the geospace

Magnetospheric Plasma Physics: The Impact

of Jim Dungey's Research David Southwood, Stanley W. H. Cowley FRS, Simon Mitton, 2015-08-29 This book makes good background reading for much of modern magnetospheric physics Its origin was a Festspiel for Professor Jim Dungey former professor in the Physics Department at Imperial College on the occasion of his 90th birthday 30 January 2013 Remarkably although he retired 30 years ago his pioneering and often maverick work in the 50 s through to the 70 s on solar terrestrial physics is probably more widely appreciated today than when he retired Dungey was a theoretical plasma physicist The book covers how his reconnection model of the magnetosphere evolved to become the standard model of solar terrestrial coupling Dungey s open magnetosphere model now underpins a holistic picture explaining not only the magnetic and plasma structure of the magnetosphere but also its dynamics which can be monitored in real time The book also shows how modern day simulation of solar terrestrial coupling can reproduce the real time evolution of the solar terrestrial system in ways undreamt of in 1961 when Dungey s epoch making paper was published Further contributions on current Earth magnetosphere research and space plasma physics included in this book show how Dungey s basic ideas have remained explanative 50 years on But the Festspiel also introduced some advances that possibly Dungey had not foreseen One of the contributions presented in this book is on the variety of magnetospheres of the solar system which have been seen directly during the space age discussing the variations in spatial scale and reconnection time scale and comparing them in respect of Earth Mercury the giant planets as well as Ganymede Planetary magnetospheric physics. 1. Proceedings of symposium 6 and the topical meeting of the COSPAR Interdisciplinary Scientific Commission D (meetings D2, D4) of the COSPAR twenty-eighth plenary meeting held in The Hague, The Netherlands, 25 June - 6 July 1990 R.
