Maintaining Biodiversity In Forest Ecosystems:

Maintaining Biodiversity in Forest Ecosystems Malcolm L. Hunter, 1999-06-10 Discusses the ways in which we can continue to benefit from forests while conserving their biodiversity *Maintaining Biodiversity in Forest Ecosystems* Malcolm L. Hunter, 1999-06-10 The maintenance of the earth's biological diversity is widely seen as both necessary for ecosystem health and aesthetically desirable This book focuses on how biodiversity can be maintained in forested ecosystems particularly in those forests that are subject to timber harvesting At the core of the book lies the concept that diversity should be conserved in all its forms from the smallest microbes to the largest trees and at all levels of organization from genes to whole ecosystems Introductory chapters on biodiversity and ecological forestry lead on to sections dealing with management at the macro landscape and micro stand levels A concluding section addresses socioeconomic considerations that round out an overall synthesis and framework for the implementation of successful management practices Thirty three experts from ten countries contribute to this thorough and comprehensive account providing a broad based perspective that will be of interest internationally to researchers and professionals in conservation forestry and ecology Maintaining Biodiversity in Forest Ecosystems Malcom Hunter, 1999

Conserving Forest Biodiversity David B. Lindenmayer, Jerry F. Franklin, 2013-04-10 While most efforts at biodiversity conservation have focused primarily on protected areas and reserves the unprotected lands surrounding those areas the matrix are equally important to preserving global biodiversity and maintaining forest health In *Conserving Forest Biodiversity* leading forest scientists David B Lindenmayer and Jerry F Franklin argue that the conservation of forest biodiversity requires a comprehensive and multiscaled approach that includes both reserve and nonreserve areas They lay the foundations for such a strategy bringing together the latest scientific information on landscape ecology forestry conservation biology and related disciplines as they examine the importance of the matrix in key areas of ecology such as metapopulation dynamics habitat fragmentation and landscape connectivity general principles for matrix management using natural disturbance regimes to guide human disturbance landscape level and stand level elements of matrix management the role of adaptive management and monitoring social dimensions and tensions in implementing matrix based forest management In addition they present five case studies that illustrate aspects and elements of applied matrix management in forests The case studies cover a wide variety of conservation planning and management issues from North America South America and Australia ranging from relatively intact forest ecosystems to an intensively managed plantation *Conserving Forest Biodiversity* presents strategies for enhancing matrix management that can play a vital role in the development of more effective approaches to maintaining forest biodiversity It examines the key issues and gives practical guidelines for sustained forest management highlighting the critical role of the matrix for scientists managers decisionmakers and other stakeholders involved in efforts to sustain biodiversity and ecosystem processes in forest landscapes Forest Ecosystems David A. Perry, Ram Oren, Stephen C. Hart, 2008-07-24 Situating forests in the context of

Eastside Forest Ecosystem Health Assessment, 1994 Ecosystem Services from Forest Landscapes Ajith H. Perera,Urmas Peterson,Guillermo Martínez Pastur,Louis R. Iverson,2018-03-22 Over the last two decades the topic of forest ecosystem services has attracted the attention of researchers land managers and policy makers around the globe The services rendered by forest ecosystems range from intrinsic to anthropocentric benefits that are typically grouped as provisioning regulating supporting and cultural The research efforts assessments and attempts to manage forest ecosystems for their sustained services are now widely published in scientific literature This volume focuses on broad scale aspects of forest ecosystem services beyond individual stands to large landscapes In doing so it illustrates the conceptual and practical opportunities as well as challenges involved with planning for forest ecosystem services across landscapes regions and nations The goal here is to broaden the scope of land use planning through the adoption of a landscape scale approach Even though this approach is complex and involves multiple ecological social cultural economic and political dimensions the landscape perspective appears to offer the best opportunity for a sustained provision of forest ecosystem services

The Bioengineered Forest Steven H. Strauss,2010-09-30 Bioengineering offers many opportunities for forestry Bioengineered trees can produce more valuable wood help reclaim contaminated land improve the health of urban trees and facilitate pest management But the ecological risks are complex and public views about the ethical acceptability of genetic engineering vary widely Unique in its breadth and diversity The Bioengineered Forest begins with a survey of the range of forestry practices for which the use of biotechnologies might be appropriate Scholars representing diverse academic perspectives and viewpoints examine in depth the economic and environmental rationale for forest biotechnologies and the current state of technology with respect to gene performance and safety They consider the contemporary political and economic environment in which bioengineering is being introduced and where the genomic revolution might take forestry and genetic engineering in the future The Bioengineered Forest presents compelling arguments in favor of genetic engineering Just as powerfully it examines the significant technical and legal hurdles involved in genetic engineering the undesirable environmental and social consequences that might result from its misapplication and the risks for businesses that are looking too exclusively for near term benefits

Compatible Forest Management Robert A. Monserud,Richard W. Haynes,Adelaide C. Johnson,2013-04-17 Public debate has stimulated interest in finding greater compatibility among forest management regimes The debate has often portrayed management choices as tradeoffs between biophysical and socioeconomic components of ecosystems Here we focus on specific management strategies and emphasize broad goals such as biodiversity wood production and habitat conservation while maintaining other values from forestlands desired by the

public We examine the following proposition Commodity production timber nontimber forest products and the other forest values biodiversity fish and wildlife habitat can be simultaneously produced from the same area in a socially acceptable manner Based on recent research in the Pacific Northwest we show there are alternatives for managing forest ecosystems that avoid the divisive arena of either or choices Much of the work discussed in this book addresses two aspects of the compatibility issue First how are various forest management practices related to an array of associated goods and services Second how do different approaches to forest management affect relatively large and complex ecosystems

Assessing Forest Ecosystem Health in the Inland West David L. Adams, 2018-12-19 Inland West their historical origins assessments of available management tools and analyses of the various choices available to policymakers Its goal is to help people understand the Inland West forests so that public policies can reflect a constructive and realistic framework in which forests can be managed for sustained health This resource is the product of a scientific workshop where 35 participants including scientists resource managers administrators and environmentalists addressed the forest health problem in the Inland West Synthesis chapters integrate the diverse knowledge and experience which participants brought to the workshop They identify and link together many of the ecological social and administrative conditions which have created the forest health problem in the West The book is unique in that it reflects a process that fostered the use of academic research field realities and industrial knowledge to define an interdisciplinary problem establish rational policy objectives and set up do able management approaches The following topics are analyzed Assessing forest ecosystem health in the Inland West Historical and anticipated changes in forest ecosystems in the Inland West Defining and measuring forest health Historical range of variability as a tool for evaluating ecosystem change Administrative barriers to implementing forest health problems Economic and social dimensions of the forest health problem Fire management Ecosystem and landscape management

Ecosystem Management in the Boreal Forest Sylvie Gauthier, 2009 Forest Ecosystem Management A management approach that aims to maintain healthy and resilient forest ecosystems by focusing on a reduction of differences between natural and managed landscapes to ensure long term maintenance of ecosystem functions and thereby retain the social and economic benefits they provide to society That is the definition of forest ecosystem management proposed in this book which provides a summary of key ecological concepts supporting this approach The book includes a review of major disturbance regimes that shape the natural dynamics of the boreal forest and gives examples from different Canadian boreal regions Several projects implementing the forest ecosystem management approach are presented to illustrate the challenges created by current forestry practices and the solutions that this new approach can provide In short knowledge and understanding of forest dynamics can serve as a guide for forest management Planning interventions based on natural dynamics can facilitate reconciliation between forest harvesting needs and the interests of other forest users

Shifting Cultivation and Environmental Change Malcolm F. Cairns, 2015-01-09 Shifting cultivation is one of the oldest forms of subsistence agriculture and is still practised by millions of poor people in the tropics Typically it involves clearing land often forest for the growing of crops for a few years and then moving on to new sites leaving the earlier ground fallow to regain its soil fertility This book brings together the best of science and farmer experimentation vividly illustrating the enormous diversity of shifting cultivation systems as well as the power of human ingenuity Some critics have tended to disparage shifting cultivation sometimes called swidden cultivation or slash and burn agriculture as unsustainable due to its supposed role in deforestation and land degradation However the book shows that such indigenous practices as they have evolved over time can be highly adaptive to land and ecology In contrast scientific agricultural solutions imposed from outside can be far more damaging to the environment and local communities The book focuses on successful agricultural strategies of upland farmers particularly in south and south east Asia and presents over 50 contributions by scholars from around the world and from various disciplines including agricultural economics ecology and anthropology It is a sequel to the much praised *Voices from the Forest Integrating Indigenous Knowledge into Sustainable*

Upland Farming RFF Press 2007 but all chapters are completely new and there is a greater emphasis on the contemporary challenges of climate change and biodiversity conservation Eastside Forest Ecosystem Health Assessment Richard L. Everett,1994 *Forestry and Environmental Change* John L. Innes,Gordon M. Hickey,H. F. Hoen,2005 Considerable emphasis has been placed on the interactions between environmental change and forests in recent years Reports have been produced detailing scenarios of forest development associated with particular changes in climate Similarly scenarios have been produced looking at likely trends in air quality However many studies have failed to recognize that some of the biggest changes for forests are related to the socioeconomic environment rather than the physical environment This book considers the interactions between forestry and environmental climatic change from social and economic perspectives

Catastrophe and Regeneration in Indonesia's Peatlands Kosuke Mizuno,Motoko S. Fujita,Shuichi Kawai,2016-02-26 The serious degradation of the vast peatlands of Indonesia since the 1990s is the proximate cause of the haze that endangers public health in Indonesian Sumatra and Borneo and also in neighbouring Singapore Malaysia and Thailand Moreover peatlands that have been drained and cleared for plantations are a major contributor to greenhouse gas emissions This new book explains the degradation of peat soils and outlines a potential course of action to deal with the catastrophe looming over the region Concerted action will be required to reduce peatland fires and a successful policy needs to enhance social welfare and economic survival support natural conservation and provide a return on investment if there is to be a sustainable society in the peatlands This book argues that regeneration is possible through a new policy of people s forestry that includes reforestation and rewetting peat soils The data come from a major long term research effort the humanosphere project that coordinates work done by researchers from the physical natural and human or social sciences **Towards Sustainable Management of the Boreal Forest** Philip Joseph Burton,2003 Presenting a summary of the development in boreal forest management this book provides a progressive vision for some of the world s northern forests It includes a selection of chapters based on the research conducted by the Sustainable Forest Management Network across Canada It includes a number of case histories **Southern Forest Science** ,2004 Southern forests provide innumerable benefits Forest scientists managers owners and users have in common the desire to improve the condition of these forests and the ecosystems they support A first step is to understand the contributions science has made and continues to make to the care and management of forests This book represents a celebration of past accomplishments summarizes the current state of knowledge and creates a vision for the future of southern forestry research and management Chapters are organized into seven sections Looking Back Productivity Forest Health Water and Soils Socioeconomic Biodiversity and Climate Change Each section is preceded by a brief introductory chapter Authors were encouraged to focus on the most important aspects of their topics citations are included to guide readers to further information
