Natural Language Processing Using Very Large Corpora:

Natural Language Processing Using Very Large Corpora S. Armstrong,Kenneth W. Church,Pierre Isabelle,Sandra Manzi,Evelyne Tzoukermann,David Yarowsky,2013-04-17 ABOUT THIS BOOK This book is intended for researchers who want to keep abreast of cur rent developments in corpus based natural language processing It is not meant as an introduction to this field for readers who need one several entry level texts are available including those of Church and Mercer 1993 Charniak 1993 Jelinek 1997 This book captures the essence of a series of highly successful work shops held in the last few years The response in 1993 to the initial Workshop on Very Large Corpora Columbus Ohio was so enthusias tic that we were encouraged to make it an annual event The following year we staged the Second Workshop on Very Large Corpora in Ky oto As a way of managing these annual workshops we then decided to register a special interest group called SIGDAT with the Association for Computational Linguistics The demand for international forums on corpus based NLP has been expanding so rapidly that in 1995 SIGDAT was led to organize not only the Third Workshop on Very Large Corpora Cambridge Mass but also a complementary workshop entitled From Texts to Tags Dublin Obviously the success of these workshops was in some measure a re flection of the growing popularity of corpus based methods in the NLP community But first and foremost it was due to the fact that the work shops attracted so many high quality papers   *Handbook of Natural Language Processing* Robert Dale,Hermann Moisl,Harold Somers,2000-07-25 This study explores the design and application of natural language text based processing systems based on generative linguistics empirical copus analysis and artificial neural networks It emphasizes the practical tools to accommodate the selected system   <u>Computational Processing of the Portuguese Language</u> Jorge Baptista,Nuno Mamede,Sara Candeias,Ivandré Paraboni,Thiago A.S. Recent Advances in Example-Based Machine Translation M. Carl,Andy Way,2012-12-06 Recent Advances in Example Based Machine Translation is of relevance to researchers and program developers in the field of Machine Translation and especially Example Based Machine Translation bilingual text processing and cross linguistic information retrieval It is also of interest to translation technologists and localisation professionals Recent Advances in Example Based Machine Translation fills a void because it is the first book to tackle the issue of EBMT in depth It gives a state of the art overview of EBMT techniques and provides a coherent structure in which all aspects of EBMT are embedded Its contributions are written by long standing researchers in the field of MT in general and EBMT in particular This book can be used in graduate level courses in machine translation and statistical NLP Intonation A. Botinis,2012-12-06 ANTONIS BOTINIS 1 1 Background This introduction provides essential information about the structure and the objects of study of this

volume Following the introduction fourteen papers which represent current research on intonation are organised into five thematic sections I Overview of Intonation II Prominence and Focus III Boundaries and Discourse IV Intonation Modelling and V Intonation Technology Within the sections the papers are arranged thematically although several papers which deal with various aspects of intonation and prosody are basically intersectional As the title indicates Intonation Analysis Modelling and Technology is a contribution to the study of prosody with major emphasis on intonation Intonation and tonal themes are thus the central object of the volume although temporal and dynamic aspects are also taken into consideration by a good number of papers Although tonal and prosodic distinctions have been dealt with throughout man s literate history with reference to the study of language for example by classical philosophers such as Plato and Aristotle it is in recent decades that we have witnessed the most fertile growth in intonation studies as with experimental phonetics and speech technology in general As Rossi this volume points out intonation research really began to blossom in the sixties with a multi fold increase in prosodic studies reflected in contributions to the International Congress of Phonetic Sciences ICPhS and in the international literature *Prosody: Theory and Experiment* M. Horne,2013-03-14 The study of prosody is perhaps the area of speech research which has undergone the most noticeable development during the past ten to fifteen years As an indication of this one can note for example that at the latest International Conference on Spoken Language Processing in Philadelphia October 1996 there were more sessions devoted to prosody than to any other area Not only that but within other sessions in particular those dealing with dialogue several of the presentations dealt specifically with prosodic aspects of dialogue research Even at the latest Eurospeech meeting in Rhodes September 1997 prosody together with speech recognition where several contributions dealt with how prosodic cues can be exploited to improve recognition processes were the most frequent session topics despite the fact that th ere was a separate ESCA satellite workshop on intonation in conjunction with the main Eurospeech meeting which included over 80 contributions This focus on prosodic research is partly due to the fact that developments in speech technology have made it possible to examine the acoustic parameters associated with prosodic phenomena in particular fundamental frequency and duration to an extent which has not been possible in other domains of speech research It is also due to the fact that significant theoretical advances in linguistics and phonetics have been made during this time which have made it possible to obtain a better understanding of how prosodic parameters function in expressing different kinds of meaning in the languages of the world *Advances in Probabilistic and Other Parsing Technologies* H. Bunt,Anton Nijholt,2013-03-09 Parsing technology is concerned with finding syntactic structure in language In parsing we have to deal with incomplete and not necessarily accurate formal descriptions of natural languages Robustness and efficiency are among the main issuesin parsing Corpora can be used to obtain frequency information about language use This allows probabilistic parsing an approach that aims at both robustness and efficiency increase Approximation techniques to be applied at the level of language description parsing strategy and syntactic representation have the same objective

Approximation at the level of syntactic representation is also known as underspecification a traditional technique to deal with syntactic ambiguity In this book new parsing technologies are collected that aim at attacking the problems of robustness and efficiency by exactly these techniques the design of probabilistic grammars and efficient probabilistic parsing algorithms approximation techniques applied to grammars and parsers to increase parsing efficiency and techniques for underspecification and the integration of semantic information in the syntactic analysis to deal with massive ambiguity The book gives a state of the art overview of current research and development in parsing technologies In its chapters we see how probabilistic methods have entered the toolbox of computational linguistics in order to be applied in both parsing theory and parsing practice The book is both a unique reference for researchers and an introduction to the field for interested graduate students *Word Frequency Distributions* R. Harald Baayen,2002-09-30 This book is a comprehensive introduction to the statistical analysis of word frequency distributions intended for computational linguists corpus linguists psycholinguists and researchers in the field of quantitative stylistics It aims to make these techniques more accessible for non specialists both theoretically by means of a careful introduction to the underlying probabilistic and statistical concepts and practically by providing a program library implementing the main models for word frequency distributions **Digital Libraries for Open Knowledge** Mark Hall,Tanja Merčun,Thomas Risse,Fabien Duchateau,2020-08-17 This book constitutes the proceedings of the 24th International Conference on Theory and Practice of Digital Libraries TPDL 2020 held in Lyon France in August 2020 The 14 full papers and 4 short papers presented were carefully reviewed and selected from 53 submissions TPDL 2020 attempts to facilitate establishing connections and convergences between diverse research communities such as Digital Humanities Information Sciences and others that could benefit from ecosystems offered by digital libraries and repositories The papers present a wide range of the following topics knowledge graphs and linked data quality assurance in digital libraries ontology design user requirements and behavior research data management and discovery and digital cultural heritage The conference was held virtually due to the COVID 19 pandemic **Handbook of Research on Natural Language Processing and Smart Service Systems** Pazos-Rangel, Rodolfo Abraham,Florencia-Juarez, Rogelio,Paredes-Valverde, Mario Andrés,Rivera, Gilberto,2020-10-02 Natural language processing NLP is a branch of artificial intelligence that has emerged as a prevalent method of practice for a sizeable amount of companies NLP enables software to understand human language and process complex data that is generated within businesses In a competitive market leading organizations are showing an increased interest in implementing this technology to improve user experience and establish smarter decision making methods Research on the application of intelligent analytics is crucial for professionals and companies who wish to gain an edge on the opposition The Handbook of Research on Natural Language Processing and Smart Service Systems is a collection of innovative research on the integration and development of intelligent software tools and their various applications within professional environments While highlighting

topics including discourse analysis information retrieval and advanced dialog systems this book is ideally designed for developers practitioners researchers managers engineers academicians business professionals scholars policymakers and students seeking current research on the improvement of competitive practices through the use of NLP and smart service systems *Deep Learning-Based Approaches for Sentiment Analysis* Basant Agarwal,Richi Nayak,Namita Mittal,Srikanta Patnaik,2020-01-24 This book covers deep learning based approaches for sentiment analysis a relatively new but fast growing research area which has significantly changed in the past few years The book presents a collection of state of the art approaches focusing on the best performing cutting edge solutions for the most common and difficult challenges faced in sentiment analysis research Providing detailed explanations of the methodologies the book is a valuable resource for researchers as well as newcomers to the field **Machine Learning: ECML 2002** Tapio Elomaa,Heikki Mannila,Hannu Toivonen,2002-01-01 This book constitutes the refereed preceedings of the 13th European Conference on Machine Learning ECML 2002 held in Helsinki Finland in August 2002 The 41 revised full papers presented together with 4 invited contributions were carefully reviewed and selected from numerous submissions Among the topics covered are computational discovery search strategies Classification support vector machines kernel methods rule induction linear learning decision tree learning boosting collaborative learning statistical learning clustering instance based learning reinforcement learning multiagent learning multirelational learning Markov decision processes active learning etc **Stairs 2002** Thierry Vidal,Paolo Liberatore,2002 Starting Artificial Intelligence Researchers Symposium STAIRS 2002 is an affiliated event to the European conference in Artificial Intelligence It offers PhD holders a first experience on submitting and presenting a paper in an international forum *Word Sense Disambiguation* Eneko Agirre,Philip Edmonds,2007-11-16 Graeme Hirst University of Toronto Of the many kinds of ambiguity in language the two that have received the most attention in computational linguistics are those of word senses and those of syntactic structure and the reasons for this are clear these ambiguities are overt their resolution is seemingly essential for any prac cal application and they seem to require a wide variety of methods and knowledge sources with no pattern apparent in what any particular stance requires Right at the birth of artificial intelligence in his 1950 paper Computing machinery and intelligence Alan Turing saw the ability to understand language as an essential test of intelligence and an essential test of l guage understanding was an ability to disambiguate his example involved deciding between the generic and specific readings of the phrase a winter s day The first generations of AI researchers found it easy to construct amples of ambiguities whose resolution seemed to require vast knowledge and deep understanding of the world and complex inference on this kno edge for example Pharmacists dispense with accuracy The disambig tion problem was in a way nothing less than the artificial intelligence problem itself No use was seen for a disambiguation method that was less than 100% perfect either it worked or it didn t Lexical resources such as they were were considered secondary to non linguistic common sense knowledge of the world **Handbook of Natural Language**
