

NATURAL RESOURCES AND ECONOMIC DEVELOPMENT

Mineral, power and forest resources are the foundation of economic development. They help in giving an initial push to the raising of production in all sectors of the economy. If the quality of manpower is high a country, it will make the best use of the natural resources and attain development in the shortest possible period of time. Human and natural resources are thus both determining factors in economic development.

We, in this article, briefly examine the importance, quantity and the quality of the mineral power and forest resources available in Pakistan. The resources are discussed under separate heads.

Natural Resources & Economic Growth, 2001

Natural Resources, Neither Curse nor Destiny Daniel Lederman, William F Maloney, 2006-10-23 Natural Resources Neither Course nor Destiny brings together a variety of analytical perspectives ranging from econometric analyses of economic growth to historical studies of successful development experiences in countries with abundant natural resources The evidence suggests that natural resources are neither a curse nor destiny Natural resources can actually spur economic development when combined with the accumulation of knowledge for economic innovation Furthermore natural resource abundance need not be the only determinant of the structure of trade in developing countries In fact the accumulation of knowledge infrastructure and the quality of governance all seem to determine not only what countries produce and export but also how firms and workers produce any good

Natural Resources Jeanette B. Pauling, 2009 Natural resources are naturally occurring substances that are considered valuable in their relatively unmodified natural form A natural resource s value rests in the amount of the material available and the demand for it There are 2 types of natural resources renewable and non renewable Natural Resources include soil timber oil minerals and other goods taken more or less from the Earth Both extraction of the basic resource and refining it into a purer directly usable form e g metals refined oils are generally considered natural resource

activities even though the latter may not necessarily occur near the former. A nation's natural resources often determine its wealth in the world economic system. In recent years the depletion of natural capital and attempts to move to sustainable development have been a major focus of development agencies. This is of particular concern in rainforest regions which hold most of the Earth's natural biodiversity, irreplaceable genetic natural capital. Conservation of natural resources is the major focus of natural capitalism, environmentalism, the ecology movement, and Green Parties. Some view this depletion as a major source of social unrest and conflicts in developing nations. This book gathers and presents important research in the field.

Scarcity and Frontiers Edward B. Barbier, 2010-12-23 Throughout much of history a critical driving force behind global economic development has been the response of society to the scarcity of key natural resources. Increasing scarcity raises the cost of exploiting existing natural resources and creates incentives in all economies to innovate and conserve more of these resources. However, economies have also responded to increasing scarcity by obtaining and developing more of these resources. Since the agricultural transition over 12 000 years ago this exploitation of new frontiers has often proved to be a pivotal human response to natural resource scarcity. This book provides a fascinating account of the contribution that natural resource exploitation has made to economic development in key eras of world history. This not only fills an important gap in the literature on economic history but also shows how we can draw lessons from these past epochs for attaining sustainable economic development in the world today.

Guided by a framework developed to offset some of the limitations inherent in the neo-classical economic definition of the nature causes and solutions of Philippine environmental problems it discusses the factors which facilitated the degradation of ecological zones in the Philippines. The monograph ends with recommendations on policy directions in the immediate and medium term period.
