**Natural Resource Economics** Siegfried V. Ciriacy-Wantrup, 1985      *Natural Resource Economics* S. V. Ciriacy-Wantrup, 2019-05-23 This volume was assembled by two of Dr Wantrup's students as a complement to his textbook *Resource Conservation Economics and Policies*. Wantrup's ideas on conservation economics continued to evolve in ways that were never fully reflected in that text and although for the student of natural resource economics it is still essential reading to stop there is to have missed some of his most valuable insights      *Natural Resource Economics* S. V. Ciriacy-Wantrup, 2019-04-09 This volume was assembled by two of Dr Wantrup's students as a complement to his textbook *Resource Conservation Economics and Policies*. Wantrup's ideas on conservation economics continued to evolve in ways that were never fully reflected in that text and although for the student of natural resource economics it is still essential reading to stop there is to have missed some of his most valuable insights

**Environmental and Natural Resource Economics** Timothy C. Haab Ph.D., John C. Whitehead, 2014-03-28 Accessible to students and practitioners without an advanced degree in environmental economics this essential reference work pinpoints the role of the economy in both creating and solving many of the world's most pressing environmental challenges. Given the number and scope of environmental problems we face today everyone from high school students to policy makers to concerned citizens should understand how the economy works and grasp how meltdowns both economic and environmental in nature can be avoided. *Environmental and Natural Resource Economics: An Encyclopedia* offers the critical information needed to comprehend these complex issues. The entries cover topics in a manner parallel to how environmental economics is commonly taught: addressing basic concepts, environmental policy, natural resource economics, market failure, exhaustible and renewable resources, benefit cost analysis, and applied welfare economics. Additionally, the book includes entries on key concepts of economics, movements, events, organizations, important individuals, and research areas relevant to the study of environmental and natural resource economics. This work stands alone as the only title currently offering such a breadth of coverage and level of detail written specifically for readers without specialized knowledge of environmental economics

**Natural Resource Economics** Allen V. Kneese, 1995 Beginning with a broad overview of the field of natural resource economics, the first part includes papers dealing with ethics and environmental economics, efforts to develop a sustainable economy, and optimal organization arrangements for environmental management. The second part explores the history of benefit cost analysis and Dr Kneese's work on water allocation in arid areas, including the trading of water rights and water pricing      *Development of the Dynamic Agro-Economic Soil Salinity (DASS) Model*, 1990      *Rethinking Sustainability* Jonathan Mark Harris, 2009-11-12 Bringing together the thoughts of economists, political scientists, anthropologists, philosophers, and agricultural policy professionals, this volume focuses on the issues of sustainability in development. Examining such topics as international trade, political power, gender roles, legal institutions, and agricultural research, the contributors focus on the missing links in theory and practice that have been barriers to the

achievement of truly sustainable development Any theory of sustainable development must take into account economic social and environmental dimensions Until recently the question What is development was often answered predominantly from the economist s perspective with high priority being assigned to expansion of economic output Social political institutional and ethical aspects have often been neglected But now that sustainable development has become a broadly accepted concept it is impossible to maintain a narrowly economic view of development For this reason the varied perspectives offered by the contributors to this volume are crucial to understanding the process of development as it relates to environmental sustainability and human well being The selection of articles is meant to be stimulating and provocative rather than comprehensive They are roughly divided between those dealing with broad theoretical issues concerning the economic political and social aspects of development Part I and those presenting more applied analysis Part II The common thread is a concern for examining which factors contribute to making development socially just and environmentally sound Rethinking Sustainability will be of interest to economists and social scientists development professionals and instructors seeking to offer their students a broad perspective on development issues Jonathan Harris is Senior Research Associate Global Development and Environment Institute at Tufts University as well as Adjunct Associate Professor of International Economics at Tufts University Fletcher School of Law

*Linking the Natural Environment and the Economy: Essays from the Eco-Eco Group* Carl Folke,Tomas Kåberger,2013-11-09

Estimating Economic Values for Nature Vincent Kerry Smith,1996-06 Estimating Economic Values for Nature presents in one volume a collection of V Kerry Smith s papers prepared over 25 years dealing with the theory and practice of non market valuation for environmental resources Taken together the papers explore the conceptual basis the implementation process and empirical performance of all available methods of measuring economic values for the services of nature and how these values are constructed from people s choices The issues discussed in this

volume include travel cost recreation demand averting behaviour household production hedonic property value hedonic wage and contingent valuation methods These essays describe what has been learned from past benefit analysis using meta analysis as well as the issues at the frontier of current research in the area This important volume will be welcomed by environmental and public economists as well as practitioners of cost benefit analysis as an authoritative and comprehensive discussion of non market valuation

**Biodiversity Conservation** C. A. Perrings, 2012-12-06 This volume is one of a number of publications to carry the results of the first research programme of the Royal Swedish Academy of Science s Beijer Institute The Institute was formed in 1991 in order to promote interdisciplinary research between natural and social scientists on the interdependency between economic and ecological systems In its first research programme the Biodiversity Programme the Institute brought together a number of leading economists and ecologists to address the theoretical and policy issues associated with the current high rates of biodiversity loss in such systems whether the result of direct depletion the destruction of habitat or specialisation in agriculture forestry and fisheries l This volume reports some of the more policy oriented work carried out under the programme The broad aim of the programme is to further our understanding of the causes and consequences of biodiversity loss and to identify the options for addressing the problem The results have turned out to be surprising to those who see biodiversity loss primarily in terms of the erosion of the genetic library In various ways the work carried out under the programme has already begun to alter our perception of where the problem in biodiversity loss lies and what policy options are available to deal with it Indeed the programme has provided a powerful set of arguments for reappraising not just the economic and ecological implications of biodiversity loss but the whole case for development based on specialisation of resource use

Selected Articles on the Conservation of Natural Resources , 1913 *Policy Instruments for Environmental and Natural Resource Management* Thomas Sterner, 2010-09-30 As Thomas Sterner points out the economic toolkit for dealing with environmental problems has become formidable It includes taxes charges permits deposit refund systems labeling and other information disclosure mechanisms Though not all these devices are widely used empirical application has started within some sectors and we are beginning to see the first systematic efforts at an advanced policy design that takes due account of market based incentives Sterner s book encourages more widespread and careful use of economic policy instruments Intended primarily for application in developing and transitional countries the book compares the accumulated experiences of the use of economic policy instruments in the U S and Europe as well as in select rich and poor countries in Asia Africa and Latin America Ambitious in scope the book discusses the design of instruments that can be employed in a wide range of contexts including transportation industrial pollution water pricing waste fisheries forests and agriculture Policy Instruments for Environmental and Natural Resource Management is deeply rooted in economics but also informed by perspectives drawn from political legal ecological and psychological research Sterner notes that in addition to meeting requirements for efficiency the selection and design of policy instruments must satisfy criteria involving equity and

political acceptability He is careful to distinguish between the well designed plans of policymakers and the resulting behavior of society A copublication of Resources for the Future the World Bank and the Swedish International Development Cooperation Agency Sida     Selected Water Resources Abstracts ,1979-03     **Toward the Measurement of Total Economic Value** George L. Uusivuori,G. Mery,2001-12-31 This book offers information and insights into the potential of market and policy instruments in improving the state of the world s forests It advocates the use of the concept of optimal mix of markets and policies as an approach to view the appropriate and operational roles of market and government in dealing with forestry issues It does not offer a list of policy recommendations to be used as a general tool to combat the threats facing the world s forests Obviously the optimal mix of markets and policies must depend on the varying national and local conditions and more specifically on the level of development The contents of this volume are organized in five Parts Part I Editorial Perspectives briefly reviews the outline of the book and analyses the balanced use of markets and policies to support world forests towards sustainable forest management Part II reviews changes and trends in society and environment outside the forest sector After all the evolution of forestry and forest industries is more dependent on these external changes than on changes internal to the sector Two important aspects that may strongly affect the future of the forest sector are covered the potential of wood biomass in replacing oil and the global freshwater outlook Part III focuses on the importance of forests and is primarily aimed at those outside the forest sector Current innovations in information technology and the fast removal of government regulations have enabled forest industry corporations to invest on a larger scale in optimal locations worldwide The rapid expansion of forest plantations in the South is a response not only to globalization but also to the expanding conservation pressures in the North Part IV is the global forum that introduces a few topical forest sector issues affecting the world as a whole However these tend to be very complex and can rarely be adequately covered from a single perspective Therefore discussants were invited to bring up additional points of view Forests have great potential in the control of climate

change This is analyzed through both the increased use of wood for energy and the possible forestry investments by Northern nations in the South to cope with the requirements of the Kyoto Protocol The interlinkages of forests and water are also highlighted Part V is entitled Regional Forum Its purpose is to analyze globally relevant continental issues Interregional studies are followed by articles focusing on Latin America Africa Asia and the Pacific North America Europe and the Russian Federation The role of the G8 economic powers in the development of the world s forests is studied from the days of imperialism to the current Action Programme on Forests and the implementation of the programme is followed up A number of comparative analyses of countries are presented The impacts of globalization on the forest sector in the Russian Far East and reforms in support of sustainable forest management in Russia are the two final themes of the book
