The Natural Problem of Consciousness Pietro Snider,2017-06-12 The Natural Problem of Consciousness is the problem of understanding why there are presently conscious beings at all Given a non reductive naturalist framework taking consciousness as an ontologically subjective biological phenomenon how can we rationally explain the fact that the actual world has turned out to be one where there are presently living beings that can feel rather than having developed as a zombie world in which there would be no conscious experiences of any kind This book introduces the Natural Problem by relating it to central problems in the philosophy of mind metaphysical mind body problem Hard Problem of consciousness and emphasizing the distinctive interest of its diachronic dimension Ranging from philosophy to biology and neuroscience it offers a thorough analysis aimed at better understanding what could explain why phenomenal consciousness has been preserved throughout evolution by natural selection This is an original engaging and thought provoking philosophical study of a neglected but fundamental question regarding the nature and origin of consciousness
