Library of Congress Catalog: Motion Pictures and Filmstrips Library of Congress, 1968 *El-Hi Textbooks in Print*, 1972 *Chemical Carcinogenesis and Mutagenesis II* Colin S. Cooper, Philip L. Grover, 2012-12-06 I have been privileged to witness and participate in the great growth of knowledge on chemical carcinogenesis and mutagenesis since 1939 when I entered graduate school in biochemistry at the University of Wisconsin Madison I immediately started to work with the carcinogenic aminoazo dyes under the direction of Professor CARL BAUMANN In 1942 I joined a fellow graduate student ELIZABETH CAVERT in marriage and we soon commenced a joyous partnership in research on chemical carcinogenesis at the McArdle Laboratory for Cancer Research in the University of Wisconsin Medical School in Madison This collaboration lasted 45 years I am very grateful that this volume is dedicated to the memory of Elizabeth The important and varied topics that are reviewed here attest to the continued growth of the fields of chemical carcinogenesis and mutagenesis including their recent and fruitful union with viral oncology I feel very optimistic about the application of knowledge in these fields to the eventual solution of numerous problems including the detection and estimation of the risks to humans of environmental chemical carcinogens and related factors *Bacterial Transcription Factors and the Cell Cycle, 2nd edition* Morigen Morigen, Monika Glinkowska, Jianping Xie, 2022-10-10 Analogous to the eukaryotic G1 S and M phase of the cell cycle the bacterial cell cycle can be classified into independent stages Slowly growing bacterial cells undergo three different stages B C and D phase respectively while the cell cycle of fast growing bacteria involves at least two independent cycles the chromosome replication and the cell division The oscillation in gene expression regulated by transcription factors and proteolysis mediated by ClpXP are closely correlated with progression of the cell cycle Indeed it has been shown that DnaA couples DNA replication initiation with the expression of the two oscillating regulators GcrA and CtrA and the DnaA GcrA CtrA regulatory cascade drives the forward progression of the *Caulobacter* cell cycle Furthermore it has been found that the

DnaA oscillation in *Escherichia coli* and *Caulobacter crescentus* plays an important role in the cell cycle coordination. RpoS in *Coxiella* regulates the gene expression involved in the developmental cycle. The SigB and SinR transcription factors control whether cells remain in or leave a biofilm responding to metabolic conditions in *Bacillus subtilis*. Similarly, BolA in most Gram negative bacteria turns off motility and turns on biofilm development as a transcription factor. CtrA regulates cell division and outer membrane composition of the pathogen *Brucella abortus*. An essential transcription factor, SciP, enhances robustness of *Caulobacter* cell cycle regulation. Interestingly, transcription factors mediated metabolism fluctuations are also related to progression of the cell cycle. It has been shown that CggR and Cra factors are involved in the flux signaling metabolite fructose 1,6-bisphosphate. IclR mediates para-hydroxybenzoate catabolism in *Streptomyces coelicolor*. CceR and AkgR regulate central carbon and energy metabolism in α -proteobacteria, and these metabolism changes affect cell growth. In line with the argument, AspC mediated aspartate metabolism coordinates the *E. coli* cell cycle. However, the molecular mechanisms of maintaining the proper cell cycle progression through coordination of transcription factors mediated gene transcription oscillation, cellular metabolism with the cell cycle, are not yet well established. This Research Topic is intended to cover the spectrum of cell cycle regulatory mechanisms, in particular the coordination of transcription factor mediated gene transcription oscillations and the cellular metabolisms associated with the cell cycle. We welcome all types of articles including Original Research, Review, and Mini Review. The subject areas of interest include but are not limited to: 1. Cell cycle coordination through gene expression and expression oscillation mediated by transcription factors. 2. Regulation of the cell cycle by proteolysis oscillation. 3. Coordination of the cell cycle with metabolism fluctuation. 4. DNA methylation fluctuation and the cell cycle. 5. Novel transcription factors and gene expression patterns associated with the cell cycle.
