

Nature of Science

Introduction

Science plays a vital role in everyone's life. Science is the process of understanding reality and nature of environment. It involves the observation about the natural world which helps to know about the unknown things to achieve a better understanding about the natural world. The nature of science leads to the development of new technology and inventions about the natural world. The understanding about the science can be useful for the advancement and progress of individual's everyday lives. Every invention and study that is done in science based on the evidence and reasons which proves its reality in the natural world.

Unless an idea is testable it is little or no use because everything in the natural world needs evidence. The testable ideas come within the scope of science in form of a set of observation that could test if the ideas were true and a set of observations that leads ideas were not true. Everything in the natural world should be tested to make sure that it is safe to use for living beings. These medicine samples are tested on specific plants and animals or if needed then also on human to ensure the verification of the result of medicines. The evidence is from the research that is done on so many diseases to reduce the chronic pain in humans but some of them produce the side effects. The invention of corticosteroids that were acclaimed at high level but later they produce severe and fatal effects like diabetes and ulcers. So, it shows that idea must be testable and check the validity of it to prevent patient from another consequences (O'Brien, W. M., 1969). The atoms had positive and negative charge. It produces the energy when they strike with each other. The opposite charge attracts each other, and the negative charges repel each other. This is clear from the evidence of Rutherford's gold foil experiment that atom had positive and negative charged electrons distributed throughout the atom. Rutherford thought the idea about doing experiment and then he designed the experiment in which atoms were arranged in that way by placing gold foil and if it was allow alpha particles passes through it, then the idea was true. He noticed that some of the alpha particles passes through the beam and some changed their direction. This clearly gives the evidence about the reason that atoms produced charge because they have positive and negative electrons. (Bandos, 2017)
