**Next-Generation GNSS Signal Design** Zheng Yao, Mingquan Lu, 2020-07-01 This book systematically discusses the signal design theory and technologies for next generation satellite navigation systems. It provides comprehensive information on the basic concept theory and key technologies employed in satellite navigation system signal design. Starting from the basic elements of the navigation signal, it combines traditional and advanced technologies into an organic whole, offering readers a complete system for signal design. Thanks to its rich content and clear structure, it is well suited as a reference guide for researchers and engineers in the fields of satellite navigation, positioning, etc. The book can also be used as teaching material or supplemental reading material by professors and graduate students alike. *Image and Graphics* Yu-Jin Zhang, 2015-08-03 This book constitutes the refereed conference proceedings of the 8th International Conference on Image and Graphics ICIG 2015 held in Tianjin, China, in August 2015. The 164 revised full papers and 6 special issue papers were carefully reviewed and selected from 339 submissions. The papers focus on various advances of theory, techniques, and algorithms in the fields of images and graphics. Virtual Reality Designs Adriana Peña Pérez Negrón, Graciela Lara López, Héctor Rafael Orozco Aguirre, 2020-03-12 Virtual Reality is not real life. Instead, it is life-like creations using computer-generated scenarios. Human behavior is replicated in virtual scenarios where every detail is controlled by computers and in situations that can be repeated under the same conditions. Based on technology and design, the user can experience presence. In the virtual world, users are embodied in avatars that represent them and are the means to interact with the virtual environment. Avatars are graphical models that behave on behalf of the human behind them. The user avatar is a proxy that also backs interaction with others, allowing computer-mediated interactions. Analyses directed to understand people's perceptions, personal and social behavior in computer-mediated interactions comprise a multidisciplinary area of study that involves, among others, computer science, psychology, and sociology. In the last two decades, a number of studies supported by Virtual Reality have been conducted to understand human behavior in some cases, the implications of the technology, or to reproduce artificial human behavior. This book presents a collection of studies from recognized researchers in the area.
