*Development of Perception in Infancy* Martha E. Arterberry, Phillip J. Kellman, 2016-04-15 The developing infant can accomplish all important perceptual tasks that an adult can albeit with less skill or precision Through infant perception research infant responses to experiences enable researchers to reveal perceptual competence test hypotheses about processes and infer neural mechanisms and researchers are able to address age old questions about perception and the origins of knowledge In *Development of Perception in Infancy The Cradle of Knowledge Revisited* Martha E Arterberry and Philip J Kellman study the methods and data of scientific research on infant perception introducing and analyzing topics such as space pattern object and motion perception through philosophical theoretical and historical contexts Infant perception research is placed in a philosophical context by addressing the abilities with which humans appear to be born those that appear to emerge due to experience and the interaction of the two The theoretical perspective is informed by the ecological tradition and from such a perspective the authors focus on the information available for perception when it is used by the developing infant the fit between infant capabilities and environmental demands and the role of perceptual learning Since the original publication of this book in 1998 MIT Arterberry and Kellman address in addition the mechanisms of change placing the basic capacities of infants at different ages and exploring what it is that infants do with this information Significantly the authors feature the perceptual underpinnings of social and cognitive development and consider two examples of atypical development congenital cataracts and Autism Spectrum Disorder Professionals and students alike will find this book a critical resource to understanding perception cognitive development social development infancy and developmental cognitive neuroscience as research on the origins of perception has changed forever our conceptions of how human mental life begins

Perceptual Development in infancy A. Yonas, 2013-08-21 Each year the Institute of Child Development brings together a group of distinguished investigators who share a common desire to understand the nature of development The chapters in this volume are based on papers presented at the 20th of this continuing series the Minnesota Symposia on Child Psychology The meetings were held October 31 through November 2 1985 at the University of Minnesota

**Perceptual Development in Early Infancy** B. McKenzie, R. H. Day, 2013-08-21 First published in 1987 This book is not intended to be either a comprehensive reference work or a systematic handbook on perception in infancy Nor is it another published report of a recently held conference It is a collection of state of the art essays on perception during the first year or so of infant development Rather than first choosing the topics and then finding experts to write about them the editors first chose the experts and invited them to write about those topics in which we know them to be interested and closely involved The outcome of this approach is a collection of chapters in which the authors at the same time critically review earlier contributions to the topic report their own work identify numerous unresolved problems and key issues and point out directions for future inquiry Naturally the emphasis placed on these facets varies markedly with both topic and author The

result is a collection of commentaries that we believe to be comprehensive informative interesting and provocative

*Perceptual Development* Alan Slater,1998 The aim of this book is both to reflect current knowledge of perceptual development and to point to some of the many questions that remain unanswered The study of perceptual development is now a sophisticated science The majority of the chapters tell a fascinating detective story the way in which infants perceive and understand the world as they develop Each of the major sections is prefaced by introductory comments and the book will be useful for advanced undergraduates postgraduates researchers and other professionals who have an interest in early perceptual development and in infancy in general *Perceptual Development in infancy* A. **Perceptual Development** Alan Slater,1998 The aim of this book is both to reflect current knowledge of perceptual development and to point to some of the many questions that remain unanswered The study of perceptual development is now a sophisticated science The majority of the chapters tell a fascinating detective story the way in which infants perceive and understand the world as they develop Each of the major sections is prefaced by introductory comments and the book will be useful for advanced undergraduates postgraduates researchers and other professionals who have an interest in early perceptual development and in infancy in general *Perceptual Development in Children* Aline H. Kidd,1971 *An Ecological Approach to Perceptual Learning and Development* Eleanor J. Gibson,Anne D. Pick,2003-05-15 The essential nature of learning is primarily thought of as a verbal process or function but this notion conveys that pre linguistic infants do

not learn Far from being blank slates that passively absorb environmental stimuli infants are active learners who perceptually engage their environments and extract information from them before language is available The ecological approach to perceiving defined as a theory about perceiving by active creatures who look and listen and move around was spearheaded by Eleanor and James Gibson in the 1950s and culminated in James Gibson's last book in 1979 Until now no comprehensive theoretical statement of ecological development has been published since Eleanor Gibson's *Principles of Perceptual Learning and Development* 1969 In *An Ecological Approach to Perceptual Learning and Development* distinguished experimental psychologists Eleanor J Gibson and Anne D Pick provide a unique theoretical framework for the ecological approach to understanding perceptual learning and development Perception in accordance with James Gibson's views entails a reciprocal relationship between a person and his or her environment The environment provides resources and opportunities for the person and the person gets information from and acts on the environment The concept of affordance is central to this idea the person acts on what the environment affords as it is appropriate This extraordinary volume covers the development of perception in detail from birth through toddlerhood beginning with the development of communication going on to perceiving and acting on objects and then to locomotion It is more than a presentation of facts about perception as it develops It outlines the ecological approach and shows how it underlies higher cognitive processes such as concept formation as well as discovery of the basic affordances of the environment This impressive work should serve as the capstone for Eleanor J Gibson's distinguished career as a developmental and experimental psychologist
