Perceptual Neuroscience:

Perceptual Neuroscience Vernon B. Mountcastle, 1998 This monumental work creates a new subdiscipline perceptual neuroscience Mountcastle gathers information from a vast number of sources reaching back through two centuries from phylogenetic comparative and neuroanatomical studies of the neocortex to rhythmicity and synchronization in neocortical networks and inquiries into the binding problem

Fine Art and Perceptual Neuroscience Paul Hackett, 2014-01-10 Over the past decade the integration of psychology and fine art has sparked growing academic interest among researchers of these disciplines The author both a psychologist and artist offers up a unique merger and perspective of these fields Through the production of fine art which is directly informed by neuroscientific and optical processes this volume aims to fill a gap in the literature and understanding of the creation and perception of the grid image created as a work of art The grid image is employed for reasons discussed in the text to illustrate more general processes associated with the integration of vision visual distortion and painting Existing at the intersection of perceptual neuroscience psychology fine art and art history this volume concerns the act of painting and the process of looking More specifically the book examines vision and the effects of visual impairment and how these can be interpreted through painting within a theoretical framework of visual neuroscience

The Perceptual Structure of Three-Dimensional Art Paul M.W. Hackett, 2016-12-26 This book deals with philosophical aspects regarding the perception of spatial relationships in two and three dimensional art It provides a structural understanding of how art is perceived within the space created by the artwork and employs a mapping sentence and partial order mereology to model perceptual structure It reviews the writing of philosophers such as Paul Crowther and art theorists such as Krauss to establish the need for this research The ontological model established Paul Crowther is used to guide an interactive account of his ontology in the interpretations of the perceptual process of three dimensional abstract art to allow the formulation of a more comprehensive philosophical account The book uniquely combines structuralist and post structuralist approaches to artistic perception and understanding with a conceptual structure from facet theory which is clarified with the help of a mapping sentence and partial order mereology

Perceptual Content William G. Lycan, 2024 *Perceptual Content* is the first book to discuss and compare the representational characters of all the traditional five senses It has three main topics or concerns the diversity of the senses the way the contents of sensory representations are layered and aspect perception perceiving as

Neuroeconomics Nathaniel D. Daw, 2013-08-13 This chapter reviews issues of current research in reinforcement learning theories and their neural substrates We consider how the formal constructs of states actions and rewards that these theories describe can be understood to map onto counterparts experienced by biological organisms learning in the real world In each case this correspondence involves significant difficulties However elaborated theoretical accounts from computer science clarify in each case how to extend these theories to more realistic circumstances while still preserving the core prediction error driven learning mechanism that has been prominent in

Glimcher, 2013-08-13 In the years since it first published Neuroeconomics Decision Making and the Brain has become the standard reference and textbook in the burgeoning field of neuroeconomics The second edition a nearly complete revision of this landmark book will set a new standard This new edition features five sections designed to serve as both classroom friendly introductions to each of the major subareas in neuroeconomics and as advanced synopses of all that has been accomplished in the last two decades in this rapidly expanding academic discipline The first of these sections provides useful introductions to the disciplines of microeconomics the psychology of judgment and decision computational neuroscience and anthropology for scholars and students seeking interdisciplinary breadth The second section provides an overview of how human and animal preferences are represented in the mammalian nervous systems Chapters on risk time preferences social preferences emotion pharmacology and common neural currencies each written by leading experts lay out the foundations of neuroeconomic thought The third section contains both overview and in depth chapters on the fundamentals of reinforcement learning value learning and value representation The fourth section The Neural Mechanisms for Choice integrates what is known about the decision making architecture into state of the art models of how we make choices The

final section embeds these mechanisms in a larger social context showing how these mechanisms function during social decision making in both humans and animals The book provides a historically rich exposition in each of its chapters and emphasizes both the accomplishments and the controversies in the field A clear explanatory style and a single expository voice characterize all chapters making core issues in economics psychology and neuroscience accessible to scholars from all disciplines The volume is essential reading for anyone interested in neuroeconomics in particular or decision making in general Editors and contributing authors are among the acknowledged experts and founders in the field making this the authoritative reference for neuroeconomics Suitable as an advanced undergraduate or graduate textbook as well as a thorough reference for active researchers Introductory chapters on economics psychology neuroscience and anthropology provide students and scholars from any discipline with the keys to understanding this interdisciplinary field Detailed chapters on subjects that include reinforcement learning risk inter temporal choice drift diffusion models game theory and prospect theory make this an invaluable reference Published in association with the Society for Neuroeconomics www.neuroeconomics.org Full color presentation throughout with numerous carefully selected illustrations to highlight key concepts

The Border Between Seeing and Thinking Ned Block, 2023 The *Border Between Seeing and Thinking* explores questions about the relationship of perception and cognition not by appealing to intuitions as is common in philosophy but to empirical evidence including experiments in neuroscience and psychology

The Attentional Shaping of Perceptual Experience Francesco Marchi, 2020-01-23 This monograph presents a clear account of when and how attentional processes can shape perceptual experience This argument is based on the prediction error minimization model of the mind The author believes that the topic of attention should take a more central role in the debate about the influence of cognition on perception Inside he shows how this can be possible The hypothesis that cognition may shape perceptual experience has been traditionally labeled as the cognitive penetrability of perceptual experience Cognitive penetrability is relevant for several debates in philosophy and cognitive science It tackles the possibility of gathering genuine knowledge on the basis of perceptual information about the world delivered by sensory channels The problem the author notes is that if our previously acquired belief can shape current perceptual experiences such experiences cannot serve as an adequate source of justification in retaining those beliefs or even forming new ones He argues that cognitive penetration may sometimes happen through attentional processes but that its occurrence need not undermine perceptual justification The book provides an overview of the cognitive penetrability debate The author discusses evidence that supports the occurrence of this phenomenon Overall this investigation offers readers a philosophical discussion of attention based on the biased competition theory It argues that attention is a property of mental representations that emerges from a metacognitive competition process

Neural Mechanisms of Language Maria Mody, 2017-10-24 This important volume brings together significant findings on the neural bases of spoken language its processing use and organization including its phylogenetic roots Employing a potent mix of conceptual and neuroimaging

based approaches contributors delve deeply into specialized structures of the speech system locating sensory and cognitive mechanisms involved in listening and comprehension grasping meanings and storing memories The novel perspectives revise familiar models by tracing linguistic interactions within and between neural systems homing in on the brain's semantic network exploring the neuroscience behind bilingualism and multilingual fluency and even making a compelling case for a more nuanced participation of the motor system in speech From these advances readers have a more three dimensional picture of the brain its functional epicenters its connections and the whole as the seat of language in both wellness and disorders Included in the topics The interaction between storage and computation in morphosyntactic processing The role of language in structure dependent cognition Multisensory integration in speech processing neural mechanisms of cross modal after effect A neurocognitive view of the bilingual brain Causal modeling methods and their application to speech and language A word in the hand the gestural origins of language Neural Mechanisms of Language presents a sophisticated mix of detail and creative approaches to understanding brain structure and function giving neuropsychologists cognitive neuroscientists developmental psychologists cognitive psychologists and speech language pathologists new windows onto the research shaping their respective fields The Neural Bases of Multisensory Processes Micah M. Murray, Mark T. Wallace, 2011-08-25

It has become accepted in the neuroscience community that perception and performance are quintessentially multisensory by nature Using the full palette of modern brain imaging and neuroscience methods The Neural Bases of Multisensory Processes details current understanding in the neural bases for these phenomena as studied across species stages of development and clinical statuses Organized thematically into nine sub sections the book is a collection of contributions by leading scientists in the field Chapters build generally from basic to applied allowing readers to ascertain how fundamental science informs the clinical and applied sciences Topics discussed include Anatomy essential for understanding the neural substrates of multisensory processing Neurophysiological bases and how multisensory stimuli can dramatically change the encoding processes for sensory information Combinatorial principles and modeling focusing on efforts to gain a better mechanistic handle on multisensory operations and their network dynamics Development and plasticity Clinical manifestations and how perception and action are affected by altered sensory experience Attention and spatial representations The last sections of the book focus on naturalistic multisensory processes in three separate contexts motion signals multisensory contributions to the perception and generation of communication signals and how the perception of flavor is generated The text provides a solid introduction for newcomers and a strong overview of the current state of the field for experts The Handbook of Speech Perception David Pisoni, Robert Remez, 2008-04-15 The Handbook of Speech Perception is a collection of forward looking articles that offer a summary of the technical and theoretical accomplishments in this vital area of research on language Now available in paperback this uniquely comprehensive companion brings together in one volume the latest research conducted in speech perception Contains original contributions by leading
