**Handbook of Austrian Economics** Peter J. Boettke, Christopher J. Coyne, 2015-09-01 The Austrian School of Economics is an intellectual tradition in economics and political economy dating back to Carl Menger in the late 19th century. Menger stressed the subjective nature of value in the individual decision calculus. Individual choices are indeed made on the margin, but the evaluations of rank ordering of ends sought in the act of choice are subjective to individual choosers. For Menger, the economic calculus was about scarce means being deployed to pursue an individual's highest valued ends. The act of choice is guided by subjective assessments of the individual and is open-ended as the individual is constantly discovering what ends to pursue and learning the most effective way to use the means available to satisfy those ends. This school of economic thinking spread outside of Austria to the rest of Europe and the United States in the early 20th century and continued to develop and gain followers, establishing itself as a major stream of heterodox economics. The Oxford Handbook of Austrian Economics provides an overview of this school and its theories. The various contributions discussed in this book all reflect a tension between the Austrian School's orthodox argumentative structure (rational choice and invisible hand) and its addressing of a

heterodox problem situations uncertainty differential knowledge ceaseless change The Austrian economists from the founders to today seek to derive the invisible hand theorem from the rational choice postulate via institutional analysis in a persistent and consistent manner Scholars and students working in the field of History of Economic Thought those following heterodox approaches and those both familiar with the Austrian School or looking to learn more will find much to learn in this comprehensive volume

Kurz, Neri Salvadori, 2022-03-09 Drawing in particular on the work of Sraffa Smith Ricardo and Marx the essays in this volume explore the characteristic features of the Classical economists approach to economic problems and the renewal of interest in that approach in modern times In recent years new material has been made available on both Sraffa and Marx which have made new insights and interpretations possible The release of Sraffa's hitherto unpublished papers and correspondence has led to reconsideration of doctrinal questions such as to what extent Sraffa built upon or deviated from the analyses of Adam Smith David Ricardo and other representatives of the classical British school and Karl Marx A major theme is also to what extent we can today equipped with Sraffa's insights and analytical tools re interpret and develop ideas of classical authors which they could present only in primitive forms on technological progress exhaustible resources and other contemporary issues On Marx the publication of the MEGA2 edition of the works papers and correspondence of Marx and Engels also gives rise to a reconsideration of this relationship given Marx's disenchantment with some of his own work and return to ideas advocated by Ricardo especially as regards the long term tendency of the rate of profits Finally the classical notion of competition and monopoly deserve to be
