Matching minors in bipartite graphs Wiederrecht, Sebastian, 2022-04-19 In this thesis we adapt fundamental parts of the Graph Minors series of Robertson and Seymour for the study of matching minors and investigate a connection to the study of directed graphs We develop matching theoretic to established results of graph minor theory We characterise the existence of a cross over a conformal cycle by means of a topological property Furthermore we develop a theory for perfect matching width a width parameter for graphs with perfect matchings introduced by Norin here we show that the disjoint alternating paths problem can be solved in polynomial time on graphs of bounded width Moreover we show that every bipartite graph with high perfect matching width must contain a large grid as a matching minor Finally we prove an analogue of the well known Flat Wall theorem and provide a qualitative description of all bipartite graphs which exclude a fixed matching minor In der vorliegenden Arbeit werden fundamentale Teile des Graphminorenprojekts von Robertson und Seymour f r das Studium von Matching Minoren adaptiert und Verbindungen zur Strukturtheorie gerichteter Graphen aufgezeigt Wir entwickeln matchingtheoretische Analogien zu etablierten Resultaten des Graphminorenprojekts Wir charakterisieren die Existenz eines Kreuzes bei einem konformen Kreis mittels topologischer Eigenschaften Weiter entwickeln wir eine Theorie zu perfekter Matchingweite einem Weiteparameter f r Graphen mit perfekten Matchings der von Norin eingef hrt wurde Hier zeigen wir dass das Disjunkte Alternierende Pfade Problem auf bipartiten Graphen mit beschr nkter Weite in Polynomialzeit l sbar ist Weiter zeigen wir dass jeder bipartite Graph mit hoher perfekter Matchingweite ein gro es Gitter als Matchingminor

enthalten muss Schlie lich zeigen wir ein Analogon des bekannten Flat Wall Theorem und geben eine qualitative Beschreibung aller bipartiter Graphen an die einen festen Matching Minor ausschlie en

A Variety of Causes Paul Noordhof, 2020-09-03 This is the first book length defence of a counterfactual theory of causation The analysis defended is new It expresses the idea that independent of its competitors a cause raises the chance of an effect over its mean background chance by a complete causal chain The analysis depends upon a novel development of David Lewis s Theory of Counterfactuals One consequence of the analysis is that causation is not transitive Causation is also nonsymmetric The counterfactual basis of causal nonsymmetry is the result of a number of different and sometimes interacting nonsymmetries The analysis allows for the development of a novel theory of events whose nature is independent of their role in causation and the identification of one other important causal relationship property causation Although compatible with Hume s denial of necessary connections between distinct existences a key feature of the theory is that it benefits from being independent of the Humean framework There are two ways in which something may be metaphysically fundamental vertically and horizontally Many metaphysicians emphasise vertical fundamentality and focus on truth making The book rejects this emphasis and the truth making approach in particular Horizontally fundamental metaphysical entities are those that are necessary components in different possible universes Causation has a claim to be horizontally fundamental the cement of any universe Laws are patterns of causation realised in different metaphysical frameworks such as those articulated by Lewis Armstrong and the powers ontologists The book recognises varieties of causation both in for example counting cases of double prevention and causation by genuine processes as types of causation and allowing that the analysis identifies causes across these different metaphysical frameworks
