Minimax Under Transportation Constraints Vladimir Tsurkov, A. Mironov, 2013-11-21 Transportation problems belong to the domains mathematical programming and operations research Transportation models are widely applied in various fields Numerous concrete problems for example assignment and distribution problems maximum flow problem etc are formulated as transportation problems Some efficient methods have been developed for solving transportation problems of various types This monograph is devoted to transportation problems with minimax criteria The classical linear transportation problem was posed several decades ago In this problem supply and demand points are given and it is required to minimize the transportation cost This statement paved the way for numerous extensions and generalizations In contrast to the original statement of the problem we consider a minimax rather than a minimum criterion In particular a matrix with the minimal largest element is sought in the class of nonnegative matrices with given sums of row and column elements In this case the idea behind the minimax criterion can be interpreted as follows Suppose that the shipment time from a supply point to a demand point is proportional to the amount to be shipped Then the minimax is the minimal time required to transport the total amount It is a common situation that the decision maker does not know the tariff coefficients In other situations they do

not have any meaning at all and neither do nonlinear tariff objective functions In such cases the minimax interpretation leads to an effective solution **Perfect Match** Jodi Picoult,2007-06 Attorney D A Nina Frost sees a parent s worst nightmare firsthand she prosecutes child molesters and she s seen one too many walk free But when her own five year old son becomes a victim Nina is determined to do whatever it takes to find the assailant no matter the consequence **Annual Report of the Ohio State Board of Agriculture** Ohio State Board of Agriculture,Ohio.
