Performance Measures and Value Creation: the State of the Art DANIELA VENANZI, 2011-12-02 The choice of financial performance measures is one of the most critical challenges facing organizations The accounting based measures of financial performance have been viewed as inadequate as firms began focusing on shareholder value as the primary long term objective of the organization Hence value based metrics were devised that explicitly incorporate the cost of capital into performance calculations Despite the increasing emphasis on these value based measures no definitive evidence exists of which metric works better than others and on the extent to which any of them is superior to traditional accounting measures In this scenario the objective of this book is contributing to the ongoing dialogue on the appropriateness of different financial performance measures by providing a systematic and updated review of the major value based measures by highlighting their respective strengths and weaknesses and by comparing the main international empirical evidence on their effectiveness This book can be a powerful tool for guiding managers and graduate students in the tangled forest of the existing metrics by providing them with the quick but adequate knowledge for consistently adopting them **Budgeting and Financial**

measurement remains a vexing problem for business firms and other kinds of organisations This book explains why the performance we want to measure long term cash flows long term viability and the performance we can measure current cash flows customer satisfaction etc are not the same The balanced scorecard which has been widely adopted by US firms does not solve these underlying problems of performance measurement and may exacerbate them because it provides no guidance on how to combine dissimilar measures into an overall appraisal of performance A measurement technique called activity based profitability analysis ABPA is suggested as a partial solution especially to the problem of combining dissimilar measures ABPA estimates the revenue consequences of each activity performed for the customer allowing firms to compare revenues with costs for these activities and hence to discriminate between activities that are ultimately profitable and those that are not

The Oxford Guide to Financial Modeling Thomas S. Y. Ho, Sang-bin Yi, 2004 The essential premise of this book is that theory and practice are equally important in describing financial modeling In it the authors try to strike a balance in their discussions between theories that provide foundations for financial models and the institutional details that provide the context for applications of the models The book presents the financial models of stock and bond options exotic options investment grade and high yield bonds convertible bonds mortgage backed securities liabilities of financial institutions the business model and the corporate model It also describes the applications of the models to corporate finance Furthermore it relates the models to financial statements risk management for an enterprise and asset liability management with illiquid instruments The financial models are progressively presented from option pricing in the securities markets to firm valuation in corporate finance following a format to emphasize the three aspects of a model the set of assumptions the model specification and the model applications Generally financial modeling books segment the world of finance as investments financial institutions corporate finance and securities analysis and in so doing they rarely emphasize the relationships between the subjects This unique book successfully ties the thought processes and applications of the financial models together and describes them as one process that provides business solutions Created as a companion website to the book readers can visit www.thomasho.com to gain deeper understanding of the book's financial models Interested readers can build and test the models described in the book using Excel and they can submit their models to the site Readers can also use the site's forum to discuss the models and can browse server based models to gain insights into the applications of the models For those using the book in meetings or class settings the site provides Power Point descriptions of the chapters Students can use available question banks on the chapters for studying
