**Performance Testing of Selected Sorbent Booms** Gary F. Smith,1978 **Performance Testing of Fiberboard Shipping Containers** ,2000 Solid and corrugated fiberboard is available in a range of grades and finishes This investigation centered on the potential use of less expensive more available and more environmental friendly fiberboard in the construction of boxes used for the packing of Military rations Meal Ready to Eat MRE rations were used for this investigation Boxes were constructed from different fiberboards and then packed with rations These boxes were then subjected to testing in accordance with ASTM 4169 96 Standard Practice for Performance Testing of Shipping Containers and Systems Distribution Cycle 18 Government Shipments and Assurance Level 1 highest intensity most severe were selected as test parameters Evaluation of the test results leads to the recommendation that the use of solid fiberboard be discontinued as corrugated fiberboard has been proven acceptable for the packing of all MREs It is also recommended that a regular slotted container RSC box design with inner fiberboard inserts be adopted for packing of MREs A redesign of the MRE box to accommodate more meals achieving an optimum container weight with resultant cost savings should also be considered

**Guidelines for the international packaging and shipping of vaccines** ,2020-12-22 International shipping of vaccines is the first leg of the complex journey that vaccines undertake to reach the end users in a country Particular challenges include the size and weight of packages implementation of quality control checks at reception ensuring environmental sustainability and maintaining required temperatures during the journey Although there are many possibilities of transport e g sea freight and terrestrial transportation air freight currently remains the most widely used means of transport for vaccines In recognition of this fact these guidelines apply predominantly to the air freighting of vaccines Transportation of vaccines from the manufacturing facility to the airport facility require the use of ground transportation and reference is also made to the qualification of refrigerated road vehicles as well The objective of these guidelines is to provide

technical guidance to help ensure the quality of vaccines during all stages of the international air transportation process. These guidelines are applicable to all persons and institutions involved in international air shipment of vaccines from the premises of the product manufacturer to the recipient country. This includes all parties involved in shipment: vaccine manufacturers, logistics service providers, LSPs, freight forwarders, carriers, and their employees. The relevant sections of these guidelines should also be considered for implementation by UN procurement agencies and other international procurement organizations, countries, donor agencies, and certifying bodies.
