**Network Management and Control** A. Kershenbaum,Manu Malek,M. Wall,2013-11-11 Like the 120 volt standard for electricity the appearance of standards in network management heralds new opportunities for creativity and achievement As one example within the framework of these evolving standards consider a system of local area networks connecting computing equipment from different vendors A bridge 1qc k 8 up because of a transient caused by a repeater failure The result is a massive disconnection of virtual circuits What is the role of the manager and the network management system in solving the problem How does the vendor implement the solution How does the user use it What measurements should be made How should they be displayed How much of the diagnosis and correction should be automated How does the solution change with different hardware and software In the IEEE Communications Magazine I recently reported a timely illustration in the area of problems in fault management At the workshop hotel I was waiting for a room assignment at the reception desk when my attendant left the counter for a moment Upon returning he took one look at his screen and whined an accusatory question at everyone in sight Who logged out my terminal Who indeed It wasn't any of us It was the system

*System Performance Evaluation* Erol Gelenbe,2000-03-24 Throughout successive generations of information technology the importance of the performance evaluation of software computer architectures and computer networks endures For example the performance issues of transaction processing systems and redundant arrays of independent disks replace the virtual memory and input output problems of the 70s ATM performance issues supercede those associated with electronic telephony of the 70s As performance issues evolve with the technologies so must our approach to evaluation In *System Performance Evaluation Methodologies and Applications* top academic and industrial experts review the major issues now faced in this arena In a series of structured focused chapters they present the state of the art in performance methodologies and applications They address developments in analytical modeling and its interaction with detailed analysis of measurement data They also discuss performance evaluation methodologies for large scale software systems in general and in the context of critical applications such as nuclear reactor control and air transportation systems With its particular emphasis on network performance for wireless networks the Internet and ATM networking *System Performance Evaluation* becomes the
