Performance Evaluation And Benchmarking:

Performance Evaluation and Benchmarking Lizy Kurian John, Lieven Eeckhout, 2018-10-03 Computer and microprocessor architectures are advancing at an astounding pace. However, increasing demands on performance coupled with a wide variety of specialized operating environments act to slow this pace by complicating the performance evaluation process. Carefully balancing efficiency and accuracy is key to avoid slowdowns and such a balance can be achieved with an in-depth understanding of the available evaluation methodologies. *Performance Evaluation and Benchmarking* outlines a variety of evaluation methods and benchmark suites considering their strengths, weaknesses, and when each is appropriate to use. Following a general overview of important performance analysis techniques, the book surveys contemporary benchmark suites for specific areas such as Java, embedded systems, CPUs, and Web servers. Subsequent chapters explain how to choose appropriate averages for reporting metrics and provide a detailed treatment of statistical methods, including a summary of statistics, how to apply statistical sampling for simulation, how to apply SimPoint, and a comprehensive overview of statistical simulation. The discussion then turns to benchmark subsetting methodologies and the fundamentals of analytical modeling, including queuing models and Petri nets. Three chapters devoted to hardware performance counters conclude the book. Supplying abundant illustrations, examples, and case studies, *Performance Evaluation and Benchmarking* offers a firm foundation in evaluation methods along with up-to-date techniques that are necessary to develop next-generation architectures.

Quantitative Models for Performance Evaluation and Benchmarking Joe Zhu, 2014-09-11 The author is one of the prominent researchers in the field of Data Envelopment Analysis (DEA), a powerful data analysis tool that can be used in performance evaluation and benchmarking. This book is based upon the author's years of research and teaching experiences. It is difficult to evaluate an organization's performance when multiple performance metrics are present. The difficulties are further enhanced when the relationships among the performance metrics are complex and involve unknown tradeoffs. This book introduces Data Envelopment Analysis (DEA) as a multiple measure performance evaluation and benchmarking tool. The focus of performance evaluation and benchmarking is shifted from characterizing performance in terms of single measures to evaluating performance as a multidimensional systems perspective. Conventional and new DEA approaches are presented and discussed using Excel spreadsheets, one of the most effective ways to analyze and evaluate decision alternatives. The user can easily develop and customize new DEA models based upon these spreadsheets. DEA models and approaches are presented to deal with performance evaluation problems in a variety of contexts. For example, a context-dependent DEA measures the relative attractiveness of similar operations, processes, products. Sensitivity analysis techniques can be easily applied and used to identify critical performance measures. Two-stage network efficiency models can be utilized to study performance of supply chain. DEA benchmarking models extend DEA's ability in performance evaluation. Various cross-efficiency approaches are presented to provide peer evaluation scores. This book also provides an easy-to-use DEA software, DEA Frontier. This

DEAFrontier is an Add In for Microsoft Excel and provides a custom menu of DEA approaches This version of DEAFrontier is for use with Excel 97 2013 under Windows and can solve up to 50 DMUs subject to the capacity of Excel Solver It is an extremely powerful tool that can assist decision makers in benchmarking and analyzing complex operational performance issues in manufacturing organizations as well as evaluating processes in banking retail franchising health care public services and many other industries

Performance Management Asbjørn Rolstadås, 2012-12-06 This book serves as a textbook for an introductory course on performance management It gives an overview over various aspects of managing performance of the modern enterprise by focusing on performance evaluation and measurement and performance improvement techniques Most of the material is based on a thorough literature search and an extensive reference list has been included The book has been sponsored by the Norwegian productivity research program TOPP and by the COMETT program of the European Community Commission It has been applied as the text for a continuing education course both within TOPP and the COMETT project APECE It will also serve as part of a course material for a master's degree in technology management The book is aimed at an audience of business and technology oriented personnel at middle and higher management level in manufacturing industry At the same time it is suitable as a textbook for business and engineering schools and colleges is organized in five parts discussing productivity and The book performance performance planning performance review performance improvement and performance influencing factors The authors have worked closely together to obtain a well coordinated text without overlap They have provided a draft This draft has been circulated for comments amongst the authors and amongst external experts Based on their input the manuscript has been revised Eivald Røfken and Einar Printz Moe chairman of the board and program manager for the TOPP research program respectively have also provided valuable input to the book

Benchmarking for Performance Evaluation Subhash C. Ray, Subal C. Kumbhakar, Pami Dua, 2015-03-25 This book provides a detailed introduction to the theoretical and methodological foundations of production efficiency analysis using benchmarking Two of the more popular methods of efficiency evaluation are Stochastic Frontier Analysis SFA and Data Envelopment Analysis DEA both of which are based on the concept of a production possibility set and its frontier Depending on the assumed objectives of the decision making unit a Production Cost or Profit Frontier is constructed from observed data on input and output quantities and prices While SFA uses different maximum likelihood estimation techniques to estimate a parametric frontier DEA relies on mathematical programming to create a nonparametric frontier Yet another alternative is the Convex Nonparametric Frontier which is based on the assumed convexity of the production possibility set and creates a piecewise linear frontier consisting of a number of tangent hyper planes Three of the papers in this volume provide a detailed and relatively easy to follow exposition of the underlying theory from neoclassical production economics and offer step by step instructions on the appropriate model to apply in different contexts and how to implement them Of particular appeal are the instructions on i how to write the

codes for different SFA models on STATA ii how to write a VBA Macro for repetitive solution of the DEA problem for each production unit on Excel Solver and iii how to write the codes for the Nonparametric Convex Frontier estimation The three other papers in the volume are primarily theoretical and will be of interest to PhD students and researchers hoping to make methodological and conceptual contributions to the field of nonparametric efficiency analysis **Computer Performance**

Performance Evaluation and Benchmarking of Intelligent Systems Raj Madhavan, Edward Tunstel, Elena Messina, 2009-09-18 To design and develop capable dependable and affordable intelligent systems their performance must be measurable Scientific methodologies for standardization and benchmarking are crucial for quantitatively evaluating the performance of emerging robotic and intelligent systems technologies There is currently no accepted standard for quantitatively measuring the performance of these systems against user defined requirements and furthermore there is no consensus on what objective evaluation procedures need to be followed to understand the performance of these systems The lack of reproducible and repeatable test methods has precluded researchers working towards a common goal from exchanging and communicating results inter comparing system performance and leveraging previous work that could otherwise avoid duplication and expedite technology transfer Currently this lack of cohesion in the community hinders progress in many domains such as manufacturing service healthcare and security By providing the research community with access to standardized tools reference data sets and open source libraries of solutions researchers and consumers will be able to evaluate the cost and benefits associated with intelligent systems and associated technologies In this vein the edited

Quantitative Models for Performance Evaluation and Benchmarking Joe Zhu,2008-10-20 Managers are often under great pressure to improve the performance of their organizations To improve performance one needs to constantly evaluate operations or processes related to producing products providing services and marketing and selling products Performance evaluation and benchmarking are a widely used method to identify and adopt best practices as a means to improve performance and increase productivity and are particularly valuable when no objective or engineered standard is available to define efficient and effective performance For this reason benchmarking is often used in managing service operations because service standards benchmarks are more difficult to define than manufacturing standards Benchmarks can be established but they are somewhat limited as they work with single measurements one at a time It is difficult to evaluate an organization s performance when there are multiple inputs and outputs to the system The difficulties are further enhanced when the relationships between the inputs and the outputs are complex and involve unknown tradeoffs It is critical to show benchmarks where multiple measurements exist The current book introduces the methodology of data envelopment analysis DEA and its uses in performance evaluation and benchmarking under the context of multiple performance measures
