palaeoglaciology     Periglacial Geomorphology Colin K. Ballantyne, 2018-01-16 A FASCINATING AND INFORMATIVE EXPLORATION OF PERIGLACIAL PROCESSES PAST AND PRESENT AND THEIR ROLE IN LANDSCAPE EVOLUTION

Periglacial Geomorphology presents a comprehensive introduction to the processes that operate in present periglacial environments and discusses the inferences that can be drawn about former periglacial environments from those processes. Organized into six parts the book opens with the historical and scientific context of periglacial geomorphology and the nature of periglacial environments. Following chapters provide systematic coverage of the full range of topics germane to a thorough understanding of periglacial geomorphology including:

- The physics of ground freezing and thawing
- Characteristics of permafrost and the nature and origin of underground ice
- Formation and significance of landforms, sediments and structures associated with permafrost
- Permafrost degradation and seasonal ground freezing and thawing
- Rock weathering in periglacial environments
- Periglacial processes operating on hillslopes and the characteristic landforms produced by rock breakdown and slope processes in cold environments
- The operation of fluvial, aeolian and coastal processes in cold environments and the resulting distinctive landforms and sediments
- The use of relict periglacial features to reconstruct past cold environments in midlatitude regions and the responses of periglacial environments to recent and predicted climate change

Periglacial Geomorphology is an important resource for undergraduate and graduate students studying geomorphology or Quaternary science within the context of geography and geology degree programs. It will be of use to all scientists whose research involves an understanding of cold environments whether from a geographical, geological, ecological, climatological, pedological, hydrological or engineering perspective.

**The History of the Study of Landforms or the Development of Geomorphology, Volume 5** T.P. Burt, A.S. Goudie, H.A. Viles, 2022-10-20 Co published with British Society for Geomorphology. This volume is the fifth in the definitive series *The History of the Study of Landforms or the Development of Geomorphology*. Volume 1 (1964) dealt with contributions to the field up to 1890. Volume 2 (1973) with the concepts and contributions of William Morris Davis. Volume 3 (1991) covered historical and regional themes during the classic period of geomorphology (1890-1950). Volume 4 (2008) concentrated on studies of geomorphological processes and Quaternary geomorphology between 1890 and 1965. By the end of this period process based studies had become dominant. Volume 5 builds on this platform covering in detail the revolutionary changes in approach that characterized the study of geomorphology in the second half of the twentieth century. It is divided into three sections: the first deals with changes in approach and method; the second with changes in ideas and the broader scientific context within which geomorphology is studied; and the final section details advances in research on processes and landforms. The volume's objective is to describe and analyse many of the developments that provide a foundation for the rich and varied subject matter of twenty-first century geomorphology.
