Peripheral Benzodiazepine Receptors:

Peripheral Benzodiazepine Receptors Eva Giesen-Crouse, 1993-05-05 Neuroscience Perspectives provides multidisciplinary reviews of topics in one of the most diverse and rapidly advancing fields in the life sciences Whether you are a new recruit to neuroscience or an established expert look to this series for one stop sources of the historical physiological pharmacological biochemical molecular biological and therapeutic aspects of chosen research areas Although peripheral type benzodiazepine recognition sites have been demonstrated in the brain and peripheral organs of various species for more than 10 years the exact physiological function or pharmacological effects have not yet been established Peripheral benzodiazepine literature is so overwhelming that the novice may find it virtually impossible to form a clear idea about the diverse findings This volume dedicated exclusively to pBR and their natural and synthetic ligands puts the available data into perspective A truly interdisciplinary approach has brought neuroscientists cardiologists endocrinologists and immunologists together to work on the description of pBR mediated effects The chemistry biochemistry and molecular biology of the pBR receptor and its ligands are reviewed their pharmacological usefulness is conjectured and thus a true overview of the field is provided **SPECIAL FEATURES** This volume follows the Neuroscience Perspectives brief of providing a historical background pharmacological biochemical and physiological aspects of research and therapeutic potential of its chosen topic The peripheral benzodiazepine recognition site has been recognised for more than ten years but the exact physiological and pharmacological effects have not yet been established **The Benzodiazepine Receptor** Walter Erhard Müller, 1987-12-10 Benzodiazepines are the most commonly used psychotropic drugs prescribed for their action as tranquillizers hypnotics and anti epileptics They act in the brain by binding to specific highly selective recognition sites the benzodiazepine receptors This book first published in 1987 summarises our knowledge of these receptors for a student and professional audience and is divided into two sections In the first part the general properties of the receptors and their involvement in the mechanisms of action of benzodiazepines are described The second part discusses the function of the receptors and concludes that the system represents a novel neuronal system for the fine adjustment of brain function or for auxiliary function if the other neuronal systems fail owing to pathological defects Peripheral Benzodiazepine Receptors in Bone Tissues Winnie W. Y. Kam, 2009 *Peripheral Benzodiazepine Receptors in Prostate and Prostatic Tumors* Jan Alenfall, 1995 Naturally Occurring Benzodiazepines, Endozepines, and their Receptors Robert B. Raffa, Diana Amantea, 2021-08-12 Understanding and addressing the current opioid crisis requires knowledge of endogenous opioids endorphins and enkephalins but there is now evidence for a benzodiazepine crisis Are there endogenous benzodiazepine like substances and what do they do How do they affect antianxiety drugs and their adverse effects Do they explain enigmatic prolonged benzodiazepine withdrawal syndrome This book raises important questions about the clinical consequences of ignoring the existence of or understanding the potential influence of endogenous benzodiazepines on the therapeutic effect of benzodiazepines their adverse effects and

the problems of withdrawal from them and other benzodiazepine receptor agonists FEATURES Discusses endogenous benzodiazepine like substances what do they do and do they affect antianxiety drugs and their adverse effects Presents information on enigmatic prolonged benzodiazepine withdrawal syndrome Describes the compounds acting at the BDZ binding sites both exogenous classical BDZ drugs and BDZ from food and plants and endogenous endozepines Assesses the putative interactions in physiology pathology and pharmacology of the compounds acting at the BDZ binding sites Dr Raffa is Adjunct Professor at the University of Arizona College of Pharmacy and Professor Emeritus at Temple University School of Pharmacy He has co authored or edited several books on pharmacology and thermodynamics is a co editor of two journals is a past president of the Mid Atlantic Pharmacology Society and is the recipient of research and teaching awards Dr Amantea is Associate Professor of Pharmacology at the Department of Pharmacy Health and Nutritional Sciences of the University of Calabria Italy where she is the leader of the Stroke Research Unit at the Section of Preclinical and Translational Pharmacology operating in the frame of the Italian Stroke Organization ISO Basic Science She is a member of the Editorial Board and the Guest Editor of the 2016 Neuroscience section of Current Opinion in Pharmacology Elsevier and the founder and the editor of the CRC Press Frontiers in Neurotherapeutics series
