Permo Triassic Events In The Eastern Tethys:

Permo-Triassic Events in the Eastern Tethys Walter C. Sweet, Yang Zunyi, J. M. Dickins, 2003-12-04 This book describes and interprets Upper Permian and Lower Triassic rocks and their fossils in the region of the eastern Tethys bringing together information gathered in the International Geological Correlation Programme Project 203 Permian-Triassic Evolution of Tethys and Western Circum-Pacific Yin Yin Hongfu, J.M. Dickins, G.R. Shi, Tong Tong Jinnan, 2000-05-10 Permian and Triassic are the interval known for the integration and separation of Pangea the closure of the Palaeotethys and the opening of Mesotethys They were associated with a series of worldwide events including the Late Palaeozoic glaciation and succeeding extensive evaporitic and reef formations the end Palaeozoic regression strong orogenies and widespread volcanism and magmatism and finally the Permo Triassic biotic macro extinction These events resulted in the formation of enormous reserves of coal petroleum evaporites phosphorites and metal resources The Permian and Triassic thus constitutes a time interval particularly important both for understanding the Earth s history and for exploration of mineral resources The book aims to reconstruct the Permian Triassic history of Pangea Palaeo Tethys and Palaeo Pacific through stratigraphic palaeogeographic and other interdisciplinary approaches It consists of two parts Part 1 deals with regional stratigraphy of Tethyan and western Circum Pacific countries which is the basis for interregional correlation and palaeogeography Part 2 deals with the biotic evolution at the Permian Triassic transition focusing on the major invertebrate groups foraminifers radiolarians brachiopods ammonoids and conodonts

Understanding Late Devonian and Permian-Triassic Biotic and Climatic Events Jeff Over, Jared Morrow, P. Wignall, 2005-12-02 The Late Devonian and Permian Triassic intervals are among the most dynamic episodes of Earth history marked by large secular changes in continental ecosystems dramatic fluctuations in ocean oxygenation major phases of biotic turnover volcanism bolide impact events and rapid fluctuations in stable isotope systems and sea level This volume highlights contributions from a broad range of geological sub disciplines currently striving to understand these critical intervals of geologically rapid global scale changes Provides updated current models for the mid Late Devonian and Permian Triassic mass extinction episodes Highlights several new analytical approaches for developing quantitative datasets Takes an integrated approach presenting datasets from a broad range of sub disciplines

Catastrophic Events and Mass Extinctions Christian Koeberl, Kenneth G. MacLeod, 2002 Mass Extinctions and Their Aftermath , 1997-09-11 Why do mass extinctions occur The demise of the dinosaurs has been discussed exhaustively but has never been put into the context of other extinction events This is the first systematic review of the mass extinctions of all organisms plant and animal terrestrial and marine that have occurred in the history of life This includes the major crisis 250 million years ago which nearly wiped out all life on Earth By examining current paleontological geological and sedimentological evidence of environmental changes the cases for explanations based on climate change marine regressions asteroid or comet impact anoxia and volcanic eruptions are all critically evaluated

Global Events and Event

Stratigraphy in the Phanerozoic Otto H. Walliser, 2012-12-06 The existence of rapid and even catastrophic turnovers within the Phanerozoic ecosystems has been discussed controversially for more than 170 years Since 1980 this discussion has become even more intensive after the hypothesis of Alvarez explaining the end Cretaceous mass extinction as the result of a huge asteroid impact on the Earth This theory stimulated several thousand papers and is still controversial The international research programme on Global Biological Events in Earth History attempts to bring the discussion back to the facts by using multidisciplinary investigations of the major Phanerozoic events The results of an international group of experts are presented giving a wealth of information and a thorough discussion of the causes of the various global events

Morphogenesis, Environmental Stress and Reverse Evolution Jean Guex, John S. Torday, William B. Miller Jr., 2020-07-23 It is widely acknowledged that life has adapted to its environment but the precise mechanism remains unknown since Natural Selection Descent with Modification and Survival of the Fittest are metaphors that cannot be scientifically tested In this unique text invertebrate and vertebrate biologists illuminate the effects of physiologic stress on epigenetic responses in the process of evolutionary adaptation from unicellular organisms to invertebrates and vertebrates respectively This book offers a novel perspective on the mechanisms underlying evolution Capacities for morphologic alterations and epigenetic adaptations subject to environmental stresses are demonstrated in both unicellular and multicellular organisms Furthermore the underlying cellular molecular mechanisms that mediate stress for adaptation will be elucidated wherever possible These include examples of reverse evolution by Professor Guex for Ammonites and for mammals by Professor Torday and Dr Miller This provides empiric evidence that the conventional way of thinking about evolution as unidirectional is incorrect leaving open the possibility that it is determined by cell cell interactions not sexual selection and reproductive strategy Rather the process of evolution can be productively traced through the conservation of an identifiable set of First Principles of Physiology that began with the unicellular form and have been consistently maintained as reflected by the return to the unicellular state over the course of the life cycle

Plants and Palynomorphs around the Permian-Triassic Boundary of South China Jianxin Yu, Jean Broutin, Zongsheng Lu, 2022-08-08 This book documents timely and systematically marvelous fossils plants and sporopollen related to the biggest mass extinction of the Permian Triassic transition Numerous beautiful pictures and comprehensive records on the plants of this unique and critical interval of geohistory are presented in this book It greatly contributes to understanding of the Permian Triassic plant diversity and evolution For geologists it is important to understand the Permian Triassic crisis and for students it is attractive to learn about the plants response to palaeoclimatic changes

The Great Paleozoic Crisis Douglas H. Erwin, 1993 The culmination of more than fifty years of research by the foremost living expert on plant classification Diversity and Classification of Flowering Plants is an important contribution to the field of plant taxonomy In the last decade the system of classifying plants has been thoroughly revised Instead of describing every individual family Takhtajan includes descriptions

in keys to families which he calls descriptive keys The advantage of descriptive keys is that they give both the characteristic features of the families and their differences The delimitation of families and orders drastically differs from the one accepted by the Englerian school and from the one accepted in Arthur Cronquist's system Takhtajan favors the smaller more natural families and orders which are more coherent and better defined where characters are easily grasped and which are more suitable for information retrieval and phylogenetic studies including cladistic analysis because it reduces polymorphic codings

Future Climates of the World Ann Henderson-Sellers, 1995-11-20 *Future Climates of the World A Modelling Perspective* is Volume 16 of the highly prestigious series of climatology reference books *World Survey of Climatology* The present volume offers a state of the art overview of our understanding of future climates and is aimed at climatology undergraduates interested non climatologists with a scientific background as well as the generally interested reader Each topic is discussed clearly so that the full implications of its affect on the earth's future climate can be fully understood The study of climate has moved from data collection climatology to the model and experimentally based predictions of climatic science Our understanding of climatic prediction depends crucially upon improvements in and improved understanding of climatic models The book comprises four main themes which follow an introductory chapter i e the geologic perspective I and present day observations II as they pertain to future climates human factors affecting future climates III and planetary geophysics and future climates IV

The Permian of Northern Pangea Peter A. Scholle, Tadeusz M. Peryt, Dana S. Ulmer-Scholle, 2012-12-06 The Permian was a remarkable time period It represents the maximum stage of Pangean continental assembly includes a major global climatic shift from glacial to nonglacial conditions icehouse greenhouse transition and is terminated by one of the most profound faunal floral extinction events in the Earth's history In addition Permian oceans although poorly understood must have had some quite unique characteristics Permian seas reached the most extreme values of carbon sulfur and strontium isotopic ratios ever achieved in Phanerozoic time and the isotopic ratios of all three elements abruptly returned to more normal values at or very close to the Permo-Triassic boundary Finally the Permian is marked by an abundance of important sedimentary mineral resources It has large fossil fuel concentrations coal oil and natural gas enormous phosphate reserves and very extensive evaporite deposits including gypsum anhydrite and halite as well as a variety of potash salts Study of the Permian has been hampered however by a number of factors These include a scattered geologic literature presented in a variety of languages a confusing regional and global stratigraphic framework based in part on inadequate type sections and largely provincial often poorly correlatable faunas All have contributed to the sparsity and inadequacy of overviews of this critical geological interval These two volumes attempt to bring together some of the widely scattered observations about these fascinating rocks at least for the northern predominantly nonglacial parts of Pangea

Tectonic Evolution, Collision, and Seismicity of Southwest Asia Rasoul Sorkhabi, 2017-12-21 Southwest Asia is one of the most remarkable regions on Earth in terms of active faulting and folding large magnitude earthquakes

volcanic landscapes petroliferous foreland basins historical civilizations as well as geologic outcrops that display the protracted and complex 540 m y stratigraphic record of Earth's Phanerozoic Era Emerged from the birth and demise of the Paleo Tethys and Neo Tethys oceans southwest Asia is currently the locus of ongoing tectonic collision between the Eurasia Arabia continental plates The region is characterized by the high plateaus of Iran and Anatolia fringed by the lofty ranges of Zagros Alborz Caucasus Taurus and Pontic mountains the region also includes the strategic marine domains of the Persian Gulf Gulf of Oman Caspian and Mediterranean This 19 chapter volume published in honor of Manuel Berberian a preeminent geologist from the region brings together a wealth of new data analyses and frontier research on the geologic evolution collisional tectonics active deformation and historical and modern seismicity of key areas in southwest Asia

When Life Nearly Died Michael J. Benton, 2015-08-24 The focus is the most severe mass extinction known in earth's history The science on which the book is based is up to date thorough and balanced Highly recommended Choice Today it is common knowledge that the dinosaurs were wiped out by a meteorite impact 65 million years ago that killed half of all species then living It is far less widely understood that a much greater catastrophe took place at the end of the Permian period 251 million years ago at least ninety percent of life on earth was destroyed *When Life Nearly Died* documents not only what happened during this gigantic mass extinction but also the recent renewal of the idea of catastrophism the theory that changes in the earth's crust were brought about suddenly in the past by phenomena that cannot be observed today Was the end Permian event caused by the impact of a huge meteorite or comet or by prolonged volcanic eruption in Siberia The evidence has been accumulating and Michael J Benton gives his verdict at the end of the volume The new edition brings the study of the greatest mass extinction of all time thoroughly up to date In the twelve years since the book was originally published hundreds of geologists and paleontologists have been investigating all aspects of how life could be driven to the brink of annihilation and especially how life recovered afterwards providing the foundations of modern ecosystems

The Cretaceous-Tertiary Event and Other Catastrophes in Earth History Graham Ryder, David E. Fastovsky, Stefan Gartner, 1996-01-01 This volume attempts to explore and clarify the relationship among the geological records the extinctions and the causes of catastrophes for life in Earth's history Most of the papers address the geological record and the extinctions across the Cretaceous-Tertiary boundary and the buried Chicxulub structure that is now consensually deemed to be of impact origin and to be intimately related to that boundary GSA website

The Palaeozoic-Mesozoic Boundary Hongfu Yin, 1996

Taphonomy Ronald E. Martin, 1999-10-28 *Taphonomy A Process Approach* is the first book to review the entire field of taphonomy or the science of fossil preservation It describes the formation of animal and plant fossils in marine and terrestrial settings and how this affects deciphering the ecology and extinction of past lifeforms and the environments in which they lived The volume emphasises a process approach to taphonomy and reviews the taphonomic behaviour of all important taxa plant and animal It will be useful to anyone interested in the preservation of fossils and the formation of fossil assemblages but it is aimed

primarily at advanced students and professionals working in paleontology stratigraphy sedimentology climate modeling and biogeochemistry

Impact Stratigraphy Alessandro Montanari, Christian Koeberl, 2006-04-10 This book provides a general introduction to impact stratigraphy with emphasis on the recognition of distal impact ejecta in the field by focusing on the impactoclastic layers of the Umbria Marche sequence in Central Italy with an almost perfect stratigraphic record over the last 200 Million years A general introduction to impact cratering and a discussion of distal ejecta and impact layers around the world is followed by a detailed description of the record of the impact of extraterrestrial bodies in sediments of the Umbria Marche Apennines The volume is of interest to a diverse audience in the geological and planetary sciences ranging from upper undergraduate to research level This book can also be used by students and researchers as a field guide to some of the most important Italian impact layers

Ecosystem Dynamics in a Polar Desert ,1998 Presents information from the primary abiotic forces defining the system and from the present hydrology biogeochemistry and physics of major sites of organic carbon production of the McMurdo Dry Valleys Additionally research on the physical chemical and biological properties of the dry valley soils is included The role of environmental management in long term ecological studies is also addressed The accompanying CDROM provides details and scale to visualize the McMurdo Dry Valleys from an ecosystem perspective

Brachiopods around the Permian-Triassic Boundary of South China Wei-Hong He, G. R. Shi, Ke-Xin Zhang, Ting-Lu Yang, Shu-Zhong Shen, Yang Zhang, 2019-01-21 This timely book documents marvelous brachiopod fossils from the Palaeozoic Mesozoic transition of South China Numerous beautiful pictures and detailed descriptions specifically the measurements of body size of brachiopod species are presented Systematic discussion on the evolution of brachiopod biodiversity and morphological features across the critical interval is not only extremely important for paleontologists to understand the marine ecosystem evolution from the Palaeozoic to the Mesozoic but also attractive for students who need to know about the end Permian mass extinction The book distinguishes itself from other studies by its detailed study of the taxonomy biodiversity and paleoecology of Permian Triassic brachiopods from different palaeogeographic facies especially from the deep water environment in South China The book also offers a unique study of the response of morphological features of brachiopods to palaeoenvironmental changes providing insights for the process of Permian Triassic crisis

Superplumes: Beyond Plate Tectonics David A. Yuen, Shigenori Maruyama, Shun-ichiro Karato, Brian F. Windley, 2007-08-26 This abundantly illustrated book provides a concise overview of our understanding of the entire mantle its evolution since early differentiation and the consequences of superplumes for earth surface processes The book s balanced authorship has produced a state of the science report on the emerging concept of superplumes This presents a new concept to explain catastrophic events on Earth through geologic time
