**Molecular Mechanisms of Membrane Traffic** D. James Morre, Kathryn E. Howell, John J.M. Bergeron, 2013-06-29 The study of membrane traffic in reconstituted cell free systems has generated an unprecedented amount of new information on the biochemistry molecular biology and genetics of membrane based molecular events that underly normal and abnormal cellular function Many of the individual steps have now been isolated and dissected in simple systems that permit detailed molecular analyses of transport mechanisms and their regulation Reconstituted events of intercompartment transport include inter membrane recognition and controlled membrane fusion fission reactions Among the many advances is the growing awareness of a remarkable evolutionary conservation of many of the components involved in the many steps of membrane traffic this realization has accelerated greatly the pace of progress in the field This book provides a collection of participant contributions from the 1992 Summer Research Conference Molecular Mechanisms of Membrane Traffic jointly sponsored with NATO by the American Society of Cell Biology The conference was held May 9-13 at the Airlie Conference Center in the Virginia countryside near Warrenton The conference was attended by 158 scientists A unique feature was the high proportion of young scientists among the participants Approximately 65% were students postdoctoral fellows and young investigators Each attendee contributed to the conference with either a platform or poster presentation **Lipid and**

**Protein Traffic** Jos A.F. Op den Kamp, 2013-06-29 The meeting on Molecular Mechanisms of Lipid and Protein Traffic sponsored by NATO Scientific Affairs Division as an Advanced Study Institute and by the Federation of European Biochemical Societies as a Lecture Course was held in Cargèse France in June 1997 The program included introductory lectures specialized up to date contributions poster sessions tutorials and workshops Emphasis was laid on the new developments in the field of membrane dynamics in particular on the insertion and translocation of proteins on intracellular protein lipid and membrane traffic and sorting and on the mutual interactions between the various events occurring during membrane biogenesis Mitochondrial biogenesis chloroplast assembly and the insertion of proteins into peroxisomes were highlighted Much progress in these research areas has been made in recent years and the ASI provided an excellent opportunity to illustrate this progress in comparison with previous meetings on a similar topic Not only graduate students and postdocs took advantage from this program but also experienced scientists were given the opportunity to obtain a complete overview of recent progress and the remodeling of ideas and concepts Adrenoleukodystrophy and Other Peroxisomal Disorders
