Northwestern Logger Matthew S. Carroll, 2019-04-09 It has often been said that natural resource and environmental problems cannot be solved without solving human problems In this book Matthew Carroll examines the economic and social circumstances of northwestern U S loggers in the face of shifts in environmental politics dramatic reductions in timber harvest levels on federal lands and changing technology and market forces among other factors that are rapidly transforming their industry their livelihoods and their communities Drawing upon sociological fieldwork in logging communities that he conducted at various times over a period of nearly a decade and using the spotted owl old growth controversy as a case study Carroll provides a rich and detailed picture of life among northwestern loggers He lays out the human dimensions and dilemmas of the timber crisis Expanding it from the oversimplified owl versus logger confrontation he puts these issues in a historical and policy context and suggests parallels to other controversies such as public grazing and federal or state river protection Carroll's work revives the concept of occupational community and shows ways it can be used to understand the dynamics of rural occupations linked to resource extraction

The Changing American Countryside Emery N. Castle, 1995 The literature on rural America to the extent that it exists has largely been written by urban based scholars perpetuating out of date notions and stereotypes or by those who see little difference between rural and agricultural concerns As a result the real rural America remains much misunderstood neglected or ignored by scholars and policymakers alike In response Emery Castle offers *The Changing American Countryside* a volume that will forever change how we look at this important subject Castle brings together the writings of eminent scholars from several disciplines and varying backgrounds to take a fresh and comprehensive look at the forgotten hinterlands These authors examine the role of non metropolitan people and places in the economic life of our nation and cover such diverse issues as poverty industry the environment education family social problems ethnicity race religion gender government public policy and regional diversity The authors are especially effective in demonstrating why rural America is so much more than just agriculture It is in fact highly diverse complex and interdependent with urban America and the international market place Most major rural problems they contend simply cannot be effectively addressed in isolation from their urban and international connections To do so is misguided and even hazardous when one fourth of our population and ninety seven per cent of our land area is rural Together these writings not only provide a new and more realistic view of rural life and public policy but also suggest how the field of rural studies can greatly enrich our understanding of national life
