Jones,Stephen P. Mayfield,2016-02-16 Our Energy Future is an introductory textbook for a college course in energy production alternative and renewable fuels and related issues involved in building a sustainable energy future Our society is consuming energy at an alarming rate as trends in energy consumption continue to rise Jones and Mayfield explore the creation and history of fossil fuels their impact on the environment and how they have become critical to our society They warn that continuing fuel usage patterns could permanently damage our environment Jones and Mayfield also outline how the adoption of sustainable biofuels will be key to our future energy stability They discuss a number of renewable energy options and then discuss different biofuel feedstocks and their potential as replacements for petroleum based products This book emphasizes the importance of continued scientific agricultural and engineering development while outlining the political and environmental challenges that are coupled with a complete shift from fossil fuels to renewable energy and biomass Our Energy Future is an excellent accessible resource for undergraduate students studying biofuels and bioenergy Provided by publisher Geothermal Energy Utilization and Technologies 2020 Carlo Roselli,Maurizio Sasso,2021-08-31 Rising pollution climate change and the depletion of fossil fuels are leading many countries to focus on renewable based energy conversion systems In particular recently introduced energy policies are giving high priority to increasing the use of renewable energy sources the improvement of energy systems security the minimization of greenhouse gas effect and social and economic cohesion Renewable energies availability varies during the day and the seasons and so their use must be accurately predicted in conjunction with the management strategies based on load shifting and energy storage Thus in order to reduce the criticalities of this uncertainty the exploitation of more flexible and stable renewable energies such as the geothermal one is necessary Geothermal energy is an abundant renewable source with significant potential in direct use applications such as in district heating systems in indirect use ones to produce electricity and in cogeneration and polygeneration systems for the combined production of

power heating and cooling energy This Special Issue includes geothermal energy utilization and the technologies used for its exploitation considering both the direct and indirect use applications

Economics and Policies in Formulating Renewable Power Development Plans Bai-Chen Xie,Karim Anaya Stucchi,Hong-zhou Li,2023-11-06 Renewable energy has been considered as an effective way to deal with challenges caused by energy security and climate change In the past decades the share of renewable energy in the energy mix has been increasing with a proportion of around 25% globally benefitting from the steady maturity of economical technological and political issues However the gap between expectations of fast renewables driven energy transitions and the reality of today s energy systems which rely heavily on fossil fuels remains stubbornly large The development of renewable energy still faces uncertainties among them are cost changes driven by the potential technology breakthroughs renewable power market oriented progress and various challenges related to grid interconnection of such intermittent renewable energy resources and some other factors Many countries and regions have issued their plans in boosting the development of renewable power However not one renewable power exploitation plan is acceptable universally due to the varied developing level of economies and societies It is of great significance to explore the economic technological and political influences of related factors in achieving the development target for renewable energy

Renewable Energy-2000 Gerard T. Wrixon,Anne-Marie E. Rooney,Wolfgang Palz,1993-01-01 *A Hypothetical Enhanced Renewable Energy Utilization (EREU) Model for Electricity Generation in Thailand* Thomas Andexer,2008-10-29 Master s Thesis from the year 2008 in the subject Environmental Sciences grade Passed Assumption University of Thailand College of Internet Distance Education CIDE School of Business Administration course Master Thesis Project language English abstract This thesis presents a research project entitled A Hypothetical Enhanced Renewable Energy Utilization EREU Model for Electricity Generation in Thailand This research is motivated by Thailand s rapidly increasing electricity consumption caused by the country s long standing above average economic growth Consequently the rising electricity demand can only be satisfied by continuously growing electricity imports and thus creating a significant burden to Thailand s national budget Further more Thailand is heavily dependent on natural gas reserves for electricity generation however these are expected to be depleted within only three decades and global price levels for conventional fuels are increasingly volatile with an ascending tendency as well Therefore Thailand faces an urgent need to strategically plan for the broad utilization of domestic renewable energy resources which is essential for a more diversified and thus sustainable electricity generation as well as for the nation s endeavor to become an energy hub within the South East Asian region Under these circumstances this research conducts a comprehensive literature review regarding the past development as well as the current situation of renewable energy utilization in Thailand which concludes in the identification of the importance of renewable energy in the given context and closes with both a distinctive need assessment and a conceptual framework for Thailand s future renewable energy strategy Subsequently the research introduces a unique primary research endeavor in the form of an

explorative expert interview survey which succeeds in a substantial collection of qualitative and in depth data These valuable data is first objectively analyzed and second subjectively interpreted and summarized to become the major source for the derivation of a multitude of potential strategic recommendations for an enhanced future renewable energy utilization development in Thailand Finally the entirety of theses recommended strategic approaches based on both the secondary and primary research are assembled to develop the Enhanced Renewable Energy Utilization EREU model for electricity generation in Thailand as the fundamental finding of this thesis and research project respectively

Sustainable Energy Production and Consumption Frano Barbir, Sergio Ulgiati, 2008-05-29 Energy and environmental security are major problems facing our global economy Fossil fuels particularly crude oil are confined to a few regions of the world and the continuity of supply is governed by dynamic political economic and ecological factors These factors conspire to force volatile often high fuel prices while at the same time environmental policy is mandating a reduction in greenhouse gases and toxic emissions Yet increased growth and demand for welfare by developed and developing countries are placing higher pressure on energy resources In particular a large fraction of new consumers in developing countries already reached a purchasing power high enough as to be able to access to commodity and energy markets worldwide thus boosting energy consumption and competition for all kinds of resources Such a trend although in principle may represent a progress towards diffuse welfare and wealth as well as much needed equity is at present contributing to a rush for the appropriation of available resources which are directly and indirectly linked to energy and may contribute to planetary instability if it is not adequately understood and managed A coherent energy strategy is required addressing both energy supply and demand security of access development problems equity market dynamics by also taking into account the whole energy lifecycle including fuel production transmission and distribution energy conversion and the impact on energy equipment manufacturers and the end users of energy systems
