**Rethinking Schools and Renewing Energy for Learning** Kris Van den Branden, 2019-01-25 Rethinking Schools and Renewing Energy for Learning presents a comprehensive view on the major challenges educators face in the 21st century and the ways in which schools can make a difference. It describes key principles that can serve as guidelines for tackling those challenges in an effective and manageable way, looking both at what children should learn and what they want to learn. Drawing on research, policy-related literature and a wide range of practice-based examples, the book addresses various topics such as goals, pedagogy, assessment, equity, policy, and the role of technology in learning. The book suggests that schools can be as rewarding and fulfilling as they have been in the past and gives examples of how this can be accomplished. Rethinking Schools and Renewing Energy for Learning will be of great interest to academics, postgraduate students, teacher educators, and scholars in the field of education, specifically interested in primary education, secondary education, teacher education, and education policy.

**Renewable Energy** Anne Elizabeth Maczulak, 2010 Green Technology is an eight-volume set that examines the relationship between human activities and their sometimes harmful consequences for the environment and explores new methods of repairing and restoring the Earth. Approaching environmental issues confronting society from a technological perspective has spawned significant controversy, and the books in this set present all sides of the debate. Designed to complement science curricula, the set also covers relevant history and new green technologies and innovations that will contribute to the field in the future. Renewable Energy Sources and Methods examines the current technologies in renewable energy, a critical subject given that the world increases its energy consumption between 1 and 3 percent each year. Considering the current rate of energy consumption and the consequences of continuing at this rate, the book explains how the main conventional sources of energy, including coal, oil, and gas, affect economies worldwide. The book also focuses on the remarkable diversity of ideas and innovations in the field of alternative energy. Sidebars, figures, and case studies enhance fundamental concepts and examine urgent issues related to the future of the environment. The volume includes information on alternative vehicles, biomass, the biorefining industry, clean energy, converting solid waste to energy, Earth's energy sources, green building design and construction, recycling, water conservation, worldwide energy programs. The book contains more than 40 color photographs and line illustrations, five appendixes, a glossary, a detailed list of print and Internet resources, and an index. Green Technology is essential for high school students, teachers, and general readers who seek information on the important issues that affect the environment worldwide. Book jacket.

**Renewable Energy Auctions** Anton Eberhard, Wikus Kruger, 2023-11-06 Renewable Energy Auctions provides an overview of renewable energy auctions globally, focusing on the Global South, since this is where auctions have been pioneered and provided most transformative results. Renewable energy auctions have become the dominant method for contracting utility-scale renewable energy projects in large part due to the cost-efficient tariffs secured through this method. The ascent of auctions has been particularly rapid and transformative in the

Global South where many countries have secured renewable energy supplies at record breaking prices This book analyses the experiences of frontier auction markets in Latin America sub Saharan Africa and India with the aim of improving how auctions are designed and implemented globally The book goes beyond the topic of auction design which is concerned with the micro economics of design choices to include auction implementation Across ten chapters the authors argue that choices around the auction implementing institution and the procurement process are overlooked in most publications on the subject yet this is often a key factor for determining outcomes Moving beyond the program level of analysis auction design and implementation the book includes both country and project level factors impacts on auction outcomes ultimately highlighting that successful price and investment outcomes are dependent upon integration of all three levels of auction design and implementation
