

REFERENCE GROUP (SOCIOLOGY)

A reference group is a group of people whose norms influence a person's behaviors. We use the group as a 'frame of reference' to make behavioral decisions.

DEFINITION

The concept of reference groups gives us a lens through which we can understand how group norms influence our behaviors. It demonstrates that we tend to want emulate the behaviors of the groups we identify with or aspire toward (our 'in groups'), and avoid behaviors of the groups with which we do not identify (our 'out groups').

EXAMPLES

- **Membership Reference Groups:** Groups with which we feel affiliation, so we try to uphold their norms and behaviors.
- **Aspirational Reference Groups:** Groups we aspire to be part of, so we emulate their behaviors and norms.
- **Dissociative Reference Groups:** Groups a person wants to ensure they are not associated with.

Existing Default Values and Recommendations for Exposure Assessment Nordiska Ministerrådet, 2012 Abstract Default values are often used in exposure assessments e.g. in modelling because of lack of actually measured data The quality of the exposure assessment outcome is therefore heavily dependent on the validity and representativeness of this input data Today the used default factors consist of a wide range of more or less well documented values originating from many different sources The purpose of this report is to give an overview and to evaluate exposure factors that are currently used by the authorities and industry in the exposure assessments for both adults occupational and consumer exposure and children in relation to REACH Another important purpose of the report is to contribute towards a further harmonisation of exposure factors by giving recommendations of most valid and representative defaults These recommendations can be used besides REACH also in
