Representations De Longueur Finie Des Groupes De Lie Resolubles:

Representations de Longueur Finie des Groupes de Lie Resolubles Fokko Du Cloux, 1989 In this paper we introduce and study the concept of a finite length topological representation of a solvable type I simply connected Lie group G In order to arrive at a satisfactory theory it is necessary to choose very carefully the irreducible representations that one uses as building blocks to this end we introduce the concept of a Schwartz space for an irreducible representation E of G After explaining the general set up of finite length representations in this context and their significance for the noncommutative differential geometry on the dual of G we show how the Ext groups associated with our problem can be captured as the cohomology groups of the Lie algebra $\mathfrak{g}$ of G acting on certain rings of differential operators This makes it possible to compute them explicitly in many examples For some classes of groups we show that our category is equivalent to a suitable category of finite length modules over the enveloping algebra of $\mathfrak{g}$ which can be studied by purely algebraic means In an appendix we develop the main properties of $\mathfrak{g}$ finite cohomology with an emphasis on the solvable case which plays an important role as a technical tool in the body of the paper and will certainly be useful in other contexts as well

Vertex Algebras and Integral Bases for the Enveloping Algebras of Affine Lie Algebras Shari A. Prevost, 1992 We present a new proof of the identities needed to exhibit an explicit $\mathbb{Z}$ basis for the universal enveloping algebra associated to an affine Lie algebra We then use the explicit $\mathbb{Z}$ bases to extend Borcherds description via vertex operator representations of a $\mathbb{Z}$ form of the enveloping algebras for the simply laced affine Lie algebras to the enveloping algebras associated to the unequal root length affine Lie algebras

Neumann Systems for the Algebraic AKNS Problem Randolph James Schilling, 1992 This work is concerned with an algebraically completely integrable Hamiltonian system whose solutions may be used to describe the finite gap solutions of the AKNS spectral problem a first order two by two matrix linear system Trace formulas constraints Lax pairs and constants of motion are obtained using Krichever's algebraic inverse spectral transform Computations are carried out explicitly over the class of spectral problems with square matrix coefficients

Eigenvalues of the Laplacian for Hecke Triangle Groups Dennis A. Hejhal, 1992 Paper I is concerned with computational aspects of the Selberg trace formalism considering the usual type of eigenfunction and including an analysis of pseudo cusp forms and their residual effects Paper II examines the modular group $PSL(2, \mathbb{Z})$ as such groups have both a discrete and continuous spectrum This paper only examines the discrete side of the spectrum

Selberg Trace Formulae and Equidistribution Theorems for Closed Geodesics and Laplace Steven Zelditch, 1992 This memoir extends the author's earlier work and gives a generalization of the Selberg trace formula and applications to generalizations of the eigenvalue counting problem and the prime geodesic theorem As a consequence of these results he obtains both a proof of the equidistribution theorem for closed geodesics and sharp error estimates His previous work derived the relevant trace formulae in the compact quotient case and this paper is concerned

largely with the additional complications that occur in the noncompact case both in terms of deriving the relevant formulae and in estimating various terms

Sum of Even Powers of Real Linear Forms Bruce Arie Reznick, 1992 This work initiates a systematic analysis of the representation of real forms of even degree as sums of powers of linear forms and the resulting implications in real algebraic geometry number theory combinatorics functional analysis and numerical analysis The proofs utilize elementary techniques from linear algebra convexity number theory and real algebraic geometry and many explicit examples and relevant historical remarks are presented

Kernel Functions, Analytic Torsion, and Moduli Spaces John David Fay, 1992 This memoir is a study of Ray Singer analytic torsion for hermitian vector bundles on a compact Riemann surface *italic C* The torsion is expressed through the trace of a modified resolvent Thus one can develop perturbation curvature formulae for the Green Szeg kernel and also for the torsion in terms of the Ahlfors Bers complex structure of the Teichmuller space and Mumford complex structure of the moduli space of stable bundles of degree zero on *italic C*
