## **Reproductive Failure:**

**Immunology of Recurrent Pregnancy Loss and Implantation Failure** Joanna Kwak-Kim, 2022-07-03 Immunology of Recurrent Pregnancy Loss provides doctors and immunologists with the information they need to help couples who experience recurrent pregnancy losses. Sections cover unexplained infertility, repeated in vitro fertilization embryo transfer failures, history of second or third trimester pregnancy losses of unknown cause, or pregnancy with a history of or active autoimmune and/or alloimmune disease. Reproductive failure (RF) including recurrent pregnancy losses (RPL) and repeated implantation failures (RIF) is rather a syndrome than a disease caused by multiple etiologies such as anatomical, endocrine, genetic, infectious, immunological, thrombotic, and unexplained etiologies. Hence, this book strives to present the latest information. In 27 chapters divided in 5 sections, the book introduces the current update of reproductive immunology topics in RF and provides systematic diagnostic guidelines, systemic and immune etiologies, and therapeutic approaches. Provides detailed immunological background for understanding the etiology and management of reproduction failure. Evaluates various immunological factors involved in the pathogenesis and management of reproduction failure. Gives insights into various immunological and therapeutic approaches for reproduction failure.

**Environmental Contaminants in Wildlife** James P. Meador, 1996-03-20 Many books have been written about the effects of toxic chemicals on wildlife, but none has focused on the practical question: How much of a chemical in the tissues of an animal is harmful? This book deals exclusively with that question. This comprehensive reference will certainly become the standard resource on the topic, offering authoritative and sound advice on many environmental contaminants. With chapters written by outstanding experts in their respective fields, this is not only a scholarly collection of discussions on different chemicals, but for those who have the day-to-day task of evaluating the harm of environment contaminants to wildlife, this book will provide answers on, for example, how to interpret 1 ppm lead in the liver of a duck or fish. The authors explain the snags of interpreting data that are sometimes conflicting or insufficient, providing the reader with helpful advice on how to cope with such data. Each chapter reviews literature on a specific chemical, followed by a easy-to-understand summary providing technical guidance. For many years, this book will remain the preeminent reference on how to interpret contaminant levels of organochlorine pesticides, PCBs, dioxins, PAHs, metals, selenium, and fluorides in wildlife.

**Selenium Assessment in Aquatic Ecosystems** A. Dennis Lemly, 2012-12-06 Selenium is a naturally occurring trace element that can become concentrated and released by industrial, agricultural, petrochemical, and mining activities. At concentrated levels, it is toxic and has polluted ecosystems around the world. This book will serve as a comprehensive practical handbook for everyone dealing with selenium in aquatic environments. It offers field-tested approaches and methods for assessment and water quality management. Using his twenty-year experience, the author discusses the effects of selenium on fish and bird populations and presents guidelines for identifying sources of pollution, interpreting selenium concentrations, assessing hazardous conditions, setting water quality

criteria and ecosystem loading limits TMDLs He also includes a procedure for setting environmentally safe limits that ensure compliance with EPA regulations Selenium Assessment in Aquatic Ecosystems will interest field scientists natural resource managers risk assessors and environmental planners

*Immunology at the fetomaternal interface* Mahmood Jeddi-Tehrani, Amir-Hassan Zarnani, Maria Laura Zenclussen, Marie-Pierre Piccinni, 2025-09-19 Reproductive biology is the mother of other areas in biology as Reproduction had been the main strategy of simple and higher organisms to evolve The

utmost fitness in evolutionary tree is biological fitness in being beneficial for successful reproduction In this connection reproductive sciences have been the focus of many research programs Specifically reproductive immunology has received the attention of researchers more than ever This trend is largely due to the industrialization of societies the increase in the age of marriage and as a result the decrease in fertility rates On the other hand despite significant advances in the field of artificial reproductive technologies low success rate of embryo transfer is the main limiting factor for in vitro fertilization treatment Therefore understanding the immunological mechanisms of implantation and the adaptation of the immune cells of the pregnancy site which leads to the maternal immunological tolerance to fetal antigens is of utmost importance Immunological alterations of the female reproductive tract commences from the first exposure to seminal plasma leading to molecular and cellular changes that increase the chance of conception and pregnancy through modulation of inflammatory responses and induction of paternal antigen specific regulatory T cells Steroid hormone directed decidualization of endometrium is the first step for embryo implantation and placental development which eventually leads to immunoregulation of the immune cells residing in the endometrium in favor of pregnancy Following placental development an extensive crosstalk begins among developing trophoblasts decidualized endometrial stromal cells and the decidual immune cells and establishes a unique triangle for induction of maternal immune tolerance All the processes of entire pregnancy are under the tight control of inflammation regulatory mechanisms While acute inflammation is a triggering mechanism of embryo implantation and parturition cell senescence associated with chronic inflammation in pregnancy related disorders such endometriosis chronic endometritis and hydrosalpinx is destructive and can lead to infertility or abortion [Hazard Assessment of Chemicals](#) Jitendra Saxena,2013-09-03 Hazard Assessment of Chemicals Current Developments Volume 4 serves as a forum for the exposition evaluation and analysis of methods techniques applications and approaches in the field of chemical hazard assessment The text consists of articles tackling subjects in certain areas of chemical hazard assessment Topics discussed include hazardous substances data bases field instruments for identifying hazardous materials water quality criteria for the protection of aquatic life and the role of environmental chemicals in reproductive failure and teratogenicity Environmentalists ecologists toxicologists public safety officers and workers and those concerned with the health effects of chemical agents in the environment will find this book very interesting
