Martin-Rosset, N. Miraglia, 2023-08-28 This publication deals with the broodmare, which is the key animal in the Equine chain. In the new competitive context of the Equine Industry, the mare should foal a healthy offspring yearly at an optimum cost. The foal should be born and weaned at the accurate months of the year to fit the particular goals of production, i.e. races, sports or leisure horses. The improvement of knowledge of the biology of pregnancy and lactation on the one hand and of the nutrition and the interaction between nutrition and physiology of reproduction on the other hand is of major concern to the equine industry. The book is divided into six parts: Pregnancy, Lactation, The foal, Feeding practices and pasture management, Nutrition and reproductive performances, Advances in reproductive biotechnologies. Each part contains peer-reviewed contributions by well-known experts. These materials are the second step of further discussion on the evaluation and prediction of the requirements of the different types of horses covered in the scope of the working group of the Horse Commission of the European Association for Animal Production. All those concerned with husbandry and feeding systems in the equine industry will find this book a valuable resource. It serves as a reference point for scientists, veterinarians, adviser officers and practitioners in the equine industry as well as for teachers and students in equine science. **The Genetics of the Horse**

Ann T. Bowling, Anatoly Ruvinsky, 2000-05-18 The theory and application of mammalian genetics have been evolving rapidly over the past two decades. This has given scientists fresh insight into the biological processes which affect the functions of the animal in question. This is the latest title in our successful series of genetics books. Reference book providing a comprehensive review of the current research in horse genetics. Chapters written by international experts in the field of worldwide relevance. Controlled Breeding in Farm Animals I. Gordon, 2013-10-22 This textbook provides a detailed view

of the different ways in which reproduction in cattle, sheep, pigs and horses can be controlled and manipulated. It is primarily of interest to students of animal science and veterinary medicine but will also be of use to those who are concerned with the practical aspects of reproduction control, whether in an advisory capacity or in applying techniques on the farm itself. A major objective of the book is to draw attention to information which may be used directly to increase the efficiency of the livestock industry. **Equine Science - Applications and Implications of New Technologies** Katy Satué Ambrojo, Juan Carlos

Gardón Poggi, 2023-08-02 Equine Science: Applications and Implications of New Technologies explores the fascinating world of history and technological advances in equine research. This comprehensive book explores the history and health of horses

**The Maternal Fetal Interface** Anthony Carter, Vibeke Dantzer, Thomas Jansson, 1998 The 29 papers contained in this volume look closely at various aspects of what is termed The Maternal Fetal Interface as it relates to the latest research in placental science A substantial section of the book is devoted to the troublesome question of vertical transmission of infectious agents namely the HIV 1 virus However other sections of the volume examine related issues such as drug and toxin transfer across the term placenta and the diversity of placental types and how this can affect a placenta's effectiveness as a barrier Anthony Carter is at the University of Odense Denmark Vibeke Dantzer is at the University of Copenhagen Denmark Thomas Jansson is at the University of Gothenburg Sweden

**Genital Infections and Infertility** Atef Darwish, 2016-06-29 This book highlights the impact of genital tract infections on female infertility male infertility and even veterinary infertility A

comprehensive source on genital infections essential for all infertility specialists is now at your hands      **Reproduction in Mammals: Volume 5, Manipulating Reproduction** Colin Russell Austin, 1986-12-11 In this our second edition of Reproduction in Mammals we are responding to numerous requests for a more up to date and rather more detailed treatment of the subject The first edition was accorded an excellent reception but Books 1 to 5 were written some 14 years ago and inevitably there have been many advances on many fronts since then As before the manner of presentation is intended to make the subject matter interesting to read and readily comprehensible to undergraduates in the biological sciences and yet with sufficient depth to provide a valued source of information to graduates engaged in both teaching and research Our authors have been selected from among the best known in their respective fields Book 5 is concerned with the many ways in which we can now manipulate reproductive processes in animals and humans thanks to our new understanding of hormone action and improved control over early developmental events We have at our disposal a whole array of synthetic hormone agonists antagonists and antibodies that can be used at will to stimulate or inhibit fertility in animals and humans alike so that productivity in livestock can be promoted according to plan and child bearing becomes more a matter of choice than chance We can compensate for infertility by in vitro fertilization and embryo transfer and overcome inherent deficiencies by techniques involving embryo manipulation Existing barriers to the dissemination and application of this new found knowledge are discussed in some detail since it is becoming increasingly clear that improvements in the quality of life for people in many developing countries will be long delayed unless they can meet essential needs and call a halt to runaway population growth      **Equine Antisperm Antibodies (EASA)** Gary Joseph Nie, 1994
