

The background of the cover is a solid blue color. It features several faint, light-blue geometric sketches. In the top left, there is a large circle with a horizontal line passing through its center. Below this, there are various circular arcs, some with radii drawn, and some with angles labeled with letters like 'A', 'B', 'C', 'D', 'E', 'F', 'G', 'H', 'I', 'J', 'K', 'L', 'M', 'N', 'O', 'P', 'Q', 'R', 'S', 'T', 'U', 'V', 'W', 'X', 'Y', 'Z'. There are also some lines and points that look like they are part of a larger geometric construction or proof. The overall style is that of a technical or scientific drawing.

Rescuing Reason A Critique Of Antirationalist Views Of Science And Knowledge:

Rescuing Reason R. Nola, 2012-12-06 Do knowledge and science arise from the application of canons of rationality and scientific method Or is all our scientific knowledge caused by socio political factors or by our interests in the socio political the view of sociologists of knowledge Or does it result from interplay of relations of power the view of Michel Foucault Or does our knowledge arise from the will to power the view of Nietzsche This volume sets out to critically examine the theses of those who would debunk the idea of rational explanation The book is wide ranging The theories of method of Quine Kuhn Feyerabend amongst others are discussed and related to the views of Marx Foucault Wittgenstein and Nietzsche as well as sociologists of science such as Mannheim and Bloor The author provides a wide interpretative framework which links the doctrines espoused by many of these authors it is argued that they inherit many of the difficulties in the Strong Programme in the sociology of knowledge and that they fail to reconcile the normativity of knowledge with their naturalism It is argued that neither relativists sceptics nihilists sociologists of knowledge nor the postmodernists successfully debunk the claims of rational explanation far from it these theorists presuppose much of the theory of methodology they deny

Epistemic Relativism M. Seidel, 2014-04-13 Markus Seidel provides a detailed critique of epistemic relativism in the sociology of scientific knowledge In addition to scrutinizing the main arguments for epistemic relativism he provides an absolutist account that nevertheless aims at integrating the relativist's intuition

Dictionary Of Atheism Skepticism & Humanism Bill Cooke, 2009-12-30 In the tradition of Voltaire's Philosophical Dictionary Ambrose Bierce's Devil's Dictionary and Joseph McCabe's Rationalist Encyclopedia this accessible dictionary addresses the contemporary need for a reference book that succinctly summarizes the key concepts current terminology and major contributions of influential thinkers broadly associated with atheism skepticism and humanism In the preface author Bill Cooke notes that his work is intended for

freethinkers in the broadest sense of the word people who like to think for themselves and not according to the preplanned routes set by others This dictionary will serve as a guide for all those people striving to lead fulfilling morally responsible lives without religious belief Readers are offered a wide range of concepts from ancient well known notions such as God free will and evil to new concepts such as eupraxsophy Also included are current buzzwords that have some bearing on the freethought worldview such as metrosexual The names of many people whose lives or work reflect freethought principles form a major portion of the entries Finally a humanist calendar is included on which events of interest to freethinkers are noted This unique accessible and highly informative work will be a welcome addition to the libraries of open minded people of all philosophic persuasions

Mario Bunge: A Centenary Festschrift Michael R. Matthews, 2019-07-17 This volume has 41 chapters written to honor the 100th birthday of Mario Bunge It celebrates the work of this influential Argentine Canadian physicist and philosopher Contributions show the value of Bunge's science informed philosophy and his systematic approach to philosophical problems The chapters explore the exceptionally wide spectrum of Bunge's contributions to metaphysics methodology and philosophy of science philosophy of mathematics philosophy of physics philosophy of psychology philosophy of social science philosophy of biology philosophy of technology moral philosophy social and political philosophy medical philosophy and education The contributors include scholars from 16 countries Bunge combines ontological realism with epistemological fallibilism He believes that science provides the best and most warranted knowledge of the natural and social world and that such knowledge is the only sound basis for moral decision making and social and political reform Bunge argues for the unity of knowledge In his eyes science and philosophy constitute a fruitful and necessary partnership Readers will discover the wisdom of this approach and will gain insight into the utility of cross disciplinary scholarship This anthology will appeal to researchers students and teachers in philosophy of science social science and liberal education programmes

The Routledge History of American Science Timothy W. Kneeland, 2022-12-01 The Routledge History of American Science provides an essential companion to the most significant themes within the subject area The field of the history of science continues to grow and expand into new areas and to adopt new theories to explain the role of science and its connections to politics economics religion social structures intellectual history and art This book takes North America as its focus and explores the history of science in the region both nationally and internationally with 27 chapters from a range of disciplines Part I takes a chronological look at the history of science in America from its origins in the Atlantic World through to the American Revolution the Civil War the World Wars and ending in the postmodern era Part II discusses American science in

practice from scientists as practitioners laboratories and field experiences to science and religion Part III examines the relationship between science and power The chapters touch on the intersection of science and imperialism environmental science in U S politics as well as capitalism and science Finally Part IV explores how science is embedded in the culture of the United States with topics such as the growing importance of climate science the role of scientific racism the construction of gender and how science and disability studies converge The final chapter reviews the way in which society has embraced or rejected science with reflections on the recent pandemic and what it may mean for the future of American science This book fills a much needed gap in the history and historiography of American science studies and will be an invaluable guide for any student or researcher in the history of science in America Philosophy, Science, Education and Culture Robert Nola,Gürol Irzik,2006-02-22 Currents such as epistemological and social constructivism postmodernism and certain forms of multiculturalism that had become fashionable within science education circles in the last decades lost sight of critical inquiry as the core aim of education In this book we develop an account of education that places critical inquiry at the core of education in general and science education in particular Since science constitutes the paradigm example of critical inquiry we explain the nature of science paying particular attention to scientific methodology and scientific modeling and at the same time showing their relevance in the science classroom We defend a universalist rationalist and objectivist account of science against epistemological and social constructivist views postmodernist approaches and epistemic multiculturalist accounts

Creativity, Psychology and the History of Science H.E. Gruber,Katja Bödeker,2005-12-28 Creativity Psychology and the History of Science offers for the first time a comprehensive overview of the oeuvre of Howard E Gruber who is noted for his contributions both to the psychology of creativity and to the history of science The present book includes papers from a wide range of topics In the contributions to creativity research Gruber proposes his key ideas for studying creative work Gruber focuses on how the thinking motivation and affect of extraordinarily creative individuals evolve and how they interact over long periods of time Gruber s approach bridges many disciplines and subdisciplines in psychology and beyond several of which are represented in the present volume cognitive psychology developmental psychology history of science aesthetics and politics The volume thus presents a unique and comprehensive contribution to our understanding of the creative process Many of Gruber s papers have not previously been easily accessible they are presented here in thoroughly revised form

The Reception of the Galilean Science of Motion in Seventeenth-Century Europe Carla Rita Palmerino,J.M.M.H. Thijssen,2004-08-31 This book collects contributions by some of the leading scholars working on seventeenth century mechanics and the mechanical philosophy Together the articles provide a broad and accurate picture of the fortune of Galileo s theory of motion in Europe and of the various physical mathematical and ontological arguments that were used in favour and against it Were Galileo s contemporaries really aware of what Westfall has described as the incompatibility between the demands of mathematical mechanics and the needs of mechanical philosophy To what extent did Galileo s silence concerning

the cause of free fall impede the acceptance of his theory of motion Which methods were used before the invention of the infinitesimal calculus to check the validity of Galileo's laws of free fall and of parabolic motion And what sort of experiments were invoked in favour or against these laws These and related questions are addressed in this volume **Bulgarian**

Studies in the Philosophy of Science D. Ginev, 2013-06-29 This volume attempts to provide a new articulation of issues surrounding scientific realism scientific rationality the epistemology of non classical physics the type of revolutionary changes in the development of science the naturalization of epistemology within frameworks of cognitive science and structural linguistics models of the information technology revolution and reconstructions of early modern logical systems

Observation and Experiment in the Natural and Social Sciences Maria Carla Galavotti, 2006-04-18 According to a long tradition in philosophy of science a clear cut distinction can be traced between a context of discovery and a context of justification This tradition dates back to the birth of the discipline in connection with the Circles of Vienna and Berlin in the twenties and thirties of last century Convicted that only the context of justification is pertinent to philosophy of science logical empiricists identified its goal with the rational reconstruction of scientific knowledge taken as the clarification of the logical structure of science through an analysis of its language and methods Stressing justification as the proper field of application of philosophy of science logical empiricists intended to leave discovery out of its remit The context of discovery was then discarded from philosophy of science and left to sociology psychology and history The distinction between context of discovery and context of justification goes hand in hand with the tenet that the theoretical side of science can and should be kept separate from its observational and experimental components Further the final abstract formulation of theories should be analysed apart from the process behind it resulting from a tangle of context dependent factors This conviction is reflected by the distinction between theoretical and observational sentences underpinning the Hempelian view of theories as nets whose knots represent theoretical terms floating on the plane of observation to which it is anchored by rules of interpretation

The Problem of Relativism in the Sociology of (Scientific) Knowledge Richard Schantz, Markus Seidel, 2013-05-02 This volume comprises original articles by leading authors from philosophy as well as sociology in the debate around relativism in the sociology of scientific knowledge Its aim has been to bring together several threads from the relevant disciplines and to cover the discussion from historical and systematic points of view Among the contributors are Maria Baghramian Barry Barnes Martin Endre Hubert Knoblauch Richard Schantz and Harvey Siegel

Philosophy of Science A-Z Stathis Psillos, 2007-03-23 Philosophy of science has always been an integral part of philosophy and since the beginning of the 20th century it has developed its own structure and its fair share of technical vocabulary and problems Philosophy of Science A Z gives you concise accurate and illuminating accounts of key positions concepts arguments and figures in the philosophy of science It helps you to understand the current debates explains their historical development and connects them with broader philosophical issues It presupposes little prior knowledge of philosophy of science and is equally

useful to students coming to the subject for the first time and for more advanced scholars who need to look up particular terms or figures You will find illuminating explanations careful analysis relevant examples open problems and precise arguments Philosophy of science is a flourishing discipline and Philosophy of Science A Z is a practical and imaginative way into and through it

Rethinking Explanation Johannes Persson, Petri Ylikoski, 2007-05-16 This volume is a product of the international research project Theory of Explanation which was funded by the Joint Committee for Nordic Research Councils for the Humanities and the Social Sciences NOS HS The project started in 2001 and operated for a period of three years by organizing a number of workshops on scientific explanation in Norway Iceland Sweden and Finland The workshops included presentations by people involved in the project and by invited guests Both groups are represented in this volume which brings together some of the papers presented in these meetings The central theme of the research project was scientific explanation but it was approached from many different angles This plurality of approaches is also visible in the present volume The authors share a joint interest in explanation but not the same theoretical or methodological assumptions As a whole this volume shows that although the theory of explanation has been a major industry within philosophy of science there are still both conceptual problems to be solved and fresh philosophical ideas to explore The papers in this volume have been divided into two broad groups Part 1 consists of papers dealing with general issues in the theory of explanation while the papers in Part 2 focus on some more specific problems Part 1 Theory of Explanation *Rethinking Scientific Change and Theory Comparison*: Léna Soler, H. Sankey, Paul Hoyningen-Huene, 2008-05-29 L NA SOLER This volume is a collection of essays devoted to the analysis of scientific change and stability It represents the most recent thinking on the topic of incommensurability and scientific theory change It explores the balance and tension that exists between commensurability and continuity or stabilities on the one hand and incommensurability and discontinuity or ruptures on the other And it discusses some central epistemological consequences regarding the nature of scientific progress rationality and realism With respect to these topics it investigates a number of new avenues and revisits some familiar issues with a focus on the history

and philosophy of physics in a way that is informed by developments in cognitive sciences as well as the claims of New experimentalists The essays in this book are fully revised versions of papers which were originally presented at the international colloquium *Repenser l'valuation comparative des thories scientifiques stabilites ruptures incommensurabilites* organized by Lina Soler and Paul Hoyningen Huene at the University of Nancy France in June 2004 Each paper is followed by a critical comment which either represents an opposing viewpoint or suggests some developments The conference was a striking example of the sort of genuine dialogue that can take place between philosophers of science historians of science and scientists who come from different traditions and endorse opposing commitments I hope that this is evident in the book too and that it will constitute one of its attractions

Philosophy of Chemistry Davis Baird, Eric Scerri, Lee McIntyre, 2011-09-01 This comprehensive volume marks a new standard in scholarship in the emerging field of the philosophy of chemistry Philosophers chemists and historians of science ask some fundamental questions about the relationship between philosophy and chemistry

Analogy in Indian and Western Philosophical Thought David B. Zilberman, 2006-08-02 This book is unusual in many respects It was written by a prolific author whose tragic untimely death did not allow to finish this and many other of his undertakings It was assembled from numerous excerpts notes and fragments according to his initial plans Zilberman's legacy still awaits its true discovery and this book is a second installment to it after *The Birth of Meaning in Hindu Thought* Kluwer 1988 Zilberman's treatment of analogy is unique in its approach scope and universality for Western philosophical thought Constantly compared to eastern and especially classical Indian interpretations analogy is presented by Zilberman as an important and in many ways primary method of philosophizing or philosophy building Due to its universality this method can be also applied in linguistics logic social analysis as well as historical and anthropological research These applications are integral part of Zilberman's book A prophetic leap to largely uncharted territories this book could be of considerable interest for experts and novices in the field of analogy alike

Mechanics and Natural Philosophy before the Scientific Revolution Walter Roy Laird, Sophie Roux, 2008-01-01 Modern mechanics was forged in the seventeenth century from materials inherited from Antiquity and transformed in the period from the Middle Ages through to the sixteenth century These materials were transmitted through a number of textual traditions and within several disciplines and practices including ancient and medieval natural philosophy statics the theory and design of machines and mathematics This volume deals with a variety of moments in the history of mechanics when conflicts arose within one textual tradition between different traditions or between textual traditions and the wider world of practice Its purpose is to show how the accommodations sometimes made in the course of these conflicts ultimately contributed to the emergence of modern mechanics The first part of the volume is concerned with ancient mechanics and its transformations in the Middle Ages the second part with the reappropriation of ancient mechanics and especially with the reception of the Pseudo Aristotelian *Mechanica* in the Renaissance and the third and final part with early modern mechanics

in specific social national and institutional contexts
