## **Research Directions In Computer Science An Mit Perspective:**

**Research Directions in Computer Science**, 1991      **Cooperative Knowledge Processing** Stefan Kirn, Gregory O'Hare, 2012-12-06 In the light of the challenges that face today's organizations there is a growing recognition that future market success and long term survival of enterprises will increasingly depend upon the effective usage of information technology. Of late a new generation of terminology has emerged to describe enterprises. This terminology draws heavily upon the virtual concept: virtual reality, virtual organization, virtual working environment and indeed virtual product. However, developing computerized organisations for the 21st century demands serious thought with regard to the judicious integration of organizational theory, design and practice with research tools and methods from within information processing technology. Within this book we approach this aim from the perspective of a radically decentralized, possibly virtual enterprise. We assume that organizations are becoming increasingly process orientated rather than adhering to the former, more traditional organizational structures based upon task oriented models. This approach has proved illuminating in that, due to the inherent autonomy of organizational subunits, any approach to coordinating decentralized activities including workflows and business processes necessitates a cooperative style of problem solving. This book introduces the reader to a stimulating new field of interdisciplinary research in cooperative problem solving. In Chapter 1 Kim presents a view of three central disciplines, namely those of Organizational Theory, Computer Supported Cooperative Work (CSCW) and Distributed Artificial Intelligence (DAI). The applications given here demonstrate how future enterprises will benefit from recent advances in the technological arena of cooperative knowledge processing.

**Made-up Minds** Gary L. Drescher, 1991. *Made Up Minds* addresses fundamental questions of learning and concept invention by means of an innovative computer program that is based on the cognitive developmental theory of psychologist Jean Piaget. Drescher uses Piaget's theory as a source of inspiration for the design of an artificial cognitive system called the schema mechanism and then uses the system to elaborate and test Piaget's theory. The approach is original enough that readers need not have extensive knowledge of artificial intelligence and a chapter summarizing Piaget's work assists readers who lack a background in developmental psychology.      *Laboratory for Computer Science Progress Report* Massachusetts Institute of Technology. Laboratory for Computer Science, 1992.

**Perspectives of Systems Informatics** Manfred Broy, Alexandre V. Zamulin, 2004-01-13 This book constitutes the thoroughly refereed postconference proceedings of the 5th International Andrei Ershov Memorial Conference PSI 2003 held in Akademgorodok, Novosibirsk, Russia, in July 2003. The 55 revised full papers presented were carefully reviewed and selected from 110 submissions during two rounds of evaluation and improvement. The papers are organized in topical sections on programming, software engineering, software education, program synthesis and transformation, graphical interfaces, partial evaluation and supercompilation, verification logic and types, concurrent and distributed systems, reactive systems, program specification, verification and model checking, constraint programming, documentation and testing.
