Functional Python Programming Steven F.

Lott, 2018-04-13 Create succinct and expressive implementations with functional programming in Python Key Features Learn how to choose between imperative and functional approaches based on expressiveness clarity and performance Get familiar with complex concepts such as monads concurrency and immutability Apply functional Python to common Exploratory Data Analysis EDA programming problems Book Description If you're a Python developer who wants to discover how to take the power of functional programming FP and bring it into your own programs then this book is essential for you even if you know next to nothing about the paradigm Starting with a general overview of functional concepts you'll explore common functional features such as first class and higher order functions pure functions and more You'll see how these are accomplished in Python 3.6 to give you the core foundations you'll build upon After that you'll discover common functional optimizations for Python to help your apps reach even higher speeds You'll learn FP concepts such as lazy evaluation using Python's generator functions and expressions Moving forward you'll learn to design and implement decorators to create composite functions You'll also explore data preparation techniques and data exploration in depth and see how the Python standard library fits the functional programming model Finally to top off your journey into the world of functional Python you'll look at the PyMonad project and some larger examples to put everything into perspective What you will learn Use Python's generator functions and generator expressions to work with collections in a non-strict or lazy manner Utilize Python library modules including itertools functools multiprocessing and concurrent features to ensure efficient functional programs Use Python strings with object-oriented suffix notation and prefix notation Avoid stateful classes with families of tuples Design and implement decorators to create composite functions Use functions such as max min map filter and sorted Write higher order functions Who this book is for This book is for Python developers who would like to perform Functional programming with Python Python Programming knowledge is assumed

Learning F# Functional Data Structures and Algorithms

Adnan Masood, 2015-06-29 F# is a multi-paradigm programming language that encompasses object-oriented imperative and functional programming language properties The F# functional programming language enables developers to write simple code to solve complex problems Starting with the fundamental concepts of F# and functional programming this book will walk you through basic problems helping you to write functional and maintainable code Using easy-to-understand examples you will learn how to design data

structures and algorithms in F and apply these concepts in real life projects The book will cover built in data structures and take you through enumerations and sequences You will gain knowledge about stacks graph related algorithms and implementations of binary trees Next you will understand the custom functional implementation of a queue review sets and maps and explore the implementation of a vector Finally you will find resources and references that will give you a comprehensive overview of F ecosystem helping you to go beyond the fundamentals

Virtual Environments '99 Michael Gervautz, Axel Hildebrand, Dieter Schmalstieg, 2012-12-06 This book contains the scientific papers presented at the SthEUROGRAPHICS Workshop on Virtual Environments 99 which st st was held in Vienna May 31 and June 1 It was organized by the Institute of Computer Graphics of the Vienna University of Technology together with the Austrian Academy of Sciences and EUROGRAPHICS The workshop brought together scientists from all over the world to present and discuss the latest scientific advances in the field of Virtual

Environments 31 papers were submitted for reviewing and 18 were selected to be presented at the workshop. Most of the top research institutions working in the area submitted papers and presented their latest results. These presentations were complemented by invited lectures from Stephen Feiner and Ron Azuma, two key researchers in the area of Augmented Reality. The book gives a good overview of the state of the art in Augmented Reality and Virtual Environment research. The special focus of the Workshop was Augmented Reality, reflecting a noticeable strong trend in the field of Virtual Environments. Augmented Reality tries to enrich real environments with virtual objects rather than replacing the real world with a virtual world. The main challenges include real time rendering, tracking, registration, and occlusion of real and virtual objects, shading and lighting, interaction, and interaction techniques in augmented environments. These problems are addressed by new research results documented in this book. Besides Augmented Reality, the papers collected here also address levels of detail, distributed environments, systems and applications, and interaction techniques. **Conference Record of POPL '95**, 1995

Proceedings Parallel Computing **Foundations of Software Technology and Theoretical Computer Science**
Rudrapatna K. Shyamasundar, 1993-11-23. For more than a decade, Foundations of Software Technology and Theoretical Computer Science Conferences have been providing an annual forum for the presentation of new research results in India and abroad. This year, 119 papers from 20 countries were submitted. Each paper was reviewed by at least three reviewers, and 33 papers were selected for presentation and included in this volume, grouped into parts on type theory, parallel algorithms, term rewriting, logic and constraint logic programming, computational geometry and complexity, software technology, concurrency, distributed algorithms and algorithms, and learning theory. Also included in the volume are the five invited papers presented at the conference. **Higher Order Logic Theorem Proving and Its Applications** Jeffrey J.

Joyce, Carl-Johan H. Seger, 1994-04-28. This volume constitutes the refereed proceedings of the 1993 Higher Order Logic Users Group Workshop held at the University of British Columbia in August 1993. The workshop was sponsored by the Centre for Integrated Computer System Research. It was the sixth in the series of annual international workshops dedicated to the topic of Higher Order Logic theorem proving, its usage in the HOL system, and its applications. The volume contains 40 papers, including an invited paper by David Parnas, McMaster University, Canada, entitled "Some theorems we should prove." *Past, Present and Future of Computing Education Research* Mikko Apiola, Sonsoles López-Pernas, Mohammed Saqr, 2023-04-17. This book presents a collection of meta studies, reviews, and scientometric analyses that together reveal a fresh picture about the past, present, and future of computing education research (CER) as a field of science. The book begins with three chapters that discuss and summarise meta research about the foundations of CER, its disciplinary identity, and use of research methodologies and theories. Based on this, the book proceeds with several scientometric analyses which explore authors and their collaboration networks, dissemination practices, international collaboration, and shifts in research focus over the years. Analyses of dissemination are deepened in two chapters that focus on some of the most influential publication venues of CER.

The book also contains a series of country or region level analyses including chapters that focus on the evolution of CER in the Baltic Region Finland Australasia Israel and in the UK Ireland Two chapters present case studies of influential CER initiatives in Sweden and Namibia This book also includes chapters that focus on CER conducted at school level and cover crucially important issues such as technology ethics algorithmic bias and their implications for CER In all this book contributes to building an understanding of the past present and future of CER This book also contributes new practical guidelines highlights topical areas of research shows who to connect with where to publish and gives ideas of innovative research niches The book takes a unique methodological approach by presenting a combination of meta studies scientometric analyses of publication metadata and large scale studies about the evolution of CER in different geographical regions This book is intended for educational practitioners researchers students and anyone interested in CER This book was written in collaboration with some of the leading experts of the field
