## **Research Data Management In The Ecological Sciences:**

**Ecological Data** William K. Michener, James W. Brunt, 2009-04-01 Ecologists are increasingly tackling difficult issues like global change loss of biodiversity and sustainability of ecosystem services These and related topics are enormously challenging requiring unprecedented multidisciplinary collaboration and rapid synthesis of large amounts of diverse data into information and ultimately knowledge New sensors computers data collection and storage devices and analytical and statistical methods provide a powerful tool kit to support analyses graphics and visualizations that were unthinkable even a few years ago New and increased emphasis on accessibility management processing and sharing of high quality well maintained and understandable data represents a significant change in how scientists view and treat data These issues are complex and despite their importance are typically not addressed in database ecological and statistical textbooks This book addresses these issues providing a much needed resource for those involved in designing and implementing ecological research as well as students who are entering the environmental sciences Chapters focus on the design of ecological studies data management principles scientific databases data quality assurance data documentation archiving ecological data and information and processing data into information and knowledge The book stops short of a detailed treatment of data analysis but does provide pointers to the relevant literature in graphics statistics and knowledge discovery The central thesis of the book is that high quality data management systems are critical for addressing future environmental challenges This requires a new approach to how we conduct ecological research that views data as a resource and promotes stewardship recycling and sharing of data Ecological Data will be particularly useful to those ecologists and information specialists that actively design manage and analyze environmental databases However it will also benefit a wider audience of scientists and students in the ecological and environmental sciences

**Research Data Management in the Ecological Sciences** Belle W. Baruch Institute for Marine Biology and Coastal Research, 1986 The papers in the volume by ecologists data managers statisticians and computer scientists were presented at a symposium at Hobcaw Barony Georgetown South Carolina in November 1984 The papers describe standard data management techniques the latest technological developments and the future direction of data management in ecology The book is divided into two sections The first section includes general concepts and methods of research data management The second includes specific examples of data management applications and currently available technology e g ecological modeling aids real time data collection management of satellite imagery data geographical information systems This volume will serve as a valuable aid to ecologists and administrators in implementing data management schemes at their sites

**A Guidebook for Integrated Ecological Assessments** Mark E. Jensen, Patrick S. Bourgeron, 2012-09-07 Ecosystem management requires a planning and decision making process that places land use in its appropriate ecological context Because ecological assessments must be conducted at various spatial scales and across jurisdictional boundaries approaches to assessment must be compatible and consistent with each other A

Guidebook for Integrated Ecological Assessment analyzes methods and provides standards and protocols for assessment and the integration of data      *Environmental Information Management And Analysis* W K Michener,J W Brunt,S G Stafford,1994-08-08 Most environmental studies are based upon data collected at fine spatial scales plots sediments cores etc Furthermore temporal scales of these studies have been relatively short days weeks months and few studies have exceeded three years duration the typical funding cycle Despite this history environmental scientists are now being called      *The Challenges of Long Term Ecological Research: A Historical Analysis* Robert B. Waide,Sharon E. Kingsland,2021-04-07 This volume explores the challenges of sustaining long term ecological research through a historical analysis of the Long Term Ecological Research Program created by the U S National Science Foundation in 1980 The book examines reasons for the creation of the Program an overview of its 40 year history and in depth historical analysis of selected sites Themes explored include the broader impact of this program on society including its relevance to environmental policy and understanding global climate change the challenge of extending ecosystem ecology into urban environments and links to creative arts and humanities projects A major theme is the evolution of a new type of network science involving comparative studies innovation in information management creation of socio ecological frameworks development of governance structures and formation of an International Long Term Ecological Research Network with worldwide reach The book s themes will interest historians philosophers and social scientists interested in ecological and environmental sciences as well as researchers across many disciplines who are involved in long term ecological research      *North American Science Symposium* ,1999      *The Medical Library Association Guide to Data Management for Librarians* Lisa Federer,2016-09-15 Technological advances and the rise of collaborative interdisciplinary approaches have changed the practice of research The 21st century researcher not only faces the challenge of managing increasingly complex datasets but also new data sharing requirements from funders and journals Success in today s research enterprise requires an understanding of how to work effectively with data yet most researchers have never had any formal training in data management Libraries have begun developing services and programs to help researchers meet the demands of the data driven research enterprise giving librarians exciting new opportunities to use their expertise and skills The Medical Library Association Guide to Data Management for Librarians highlights the many ways that librarians are addressing researchers changing needs at a variety of institutions including academic hospital and government libraries Each chapter ends with pearls of wisdom a bulleted list of 5 10 takeaway messages from the chapter that will help readers quickly put the ideas from the chapter into practice From theoretical foundations to practical applications this book provides a background for librarians who are new to data management as well as new ideas and approaches for experienced data librarians      **Assessing Biological Diversity in the United States** ,1986      *Long-Term Ecological Research* Michael R. Willig,Lawrence R. Walker,2016-04-12 The Long Term Ecological Research LTER Program is in a sense an experiment to transform the nature of science and represents one of the most effective mechanisms for

catalyzing comprehensive site based research that is collaborative multidisciplinary and long term in nature The scientific contributions of the Program are prodigious but the broader impacts of participation have not been examined in a formal way This book captures the consequences of participation in the Program on the perspectives attitudes and practices of environmental scientists The edited volume comprises three sections The first section includes two chapters that provide an overview of the history goals mission and inner workings of the LTER network of sites The second section comprises three dozen retrospective essays by scientists data managers or educators who represent a broad spectrum of LTER sites from deserts to tropical forests and from arctic to marine ecosystems Each essay addresses the same series of probing questions to uncover the extent to which participation has affected the ways that scientists conduct research educate students or provide outreach to the public The final section encompasses 5 chapters whose authors are biophysical scientists historians behavioral scientists or social scientists This section analyzes integrates or synthesizes the content of the previous chapters from multiple perspectives and uncovers emergent themes and future directions

**Environmental Monitoring** G. Bruce Wiersma, 2004-04-27 The current rate and scale of environmental change around the world makes the detection and understanding of these changes increasingly urgent Subsequently government legislation is focusing on measurable results of environmental programs requiring researchers to employ effective and efficient methods for acquiring high quality data Focusing on pollution issues and impacts resulting from human activities Environmental Monitoring is the first to bring together the conceptual basis behind the complex and specific approaches to the monitoring of air water and land Coverage includes integrated monitoring at the landscape level as well as case studies of existing monitoring programs such as the Chesapeake Bay Program The book also addresses the recent legislative focus on high quality data results and conducting monitoring programs in different ecosystems and environmental media
