and the better ductility and buckling resistance of SRC columns compared to steel or reinforced concrete. Special considerations are given to resistance calculations that maximize the full strength of the materials with concrete cylinder strength up to 90 N/mm², yield strength of structural steel up to 690 N/mm² and yield strength of reinforcing steel up to 600 N/mm² respectively. These examples build on the design principles set out in the companion volume allowing the readers to practice and understand the EC4 methodology easily. Structural engineers and designers who are familiar with basic EC4 design should find these design examples particularly helpful whilst engineering undergraduate and graduate students who are studying composite steel concrete design and construction should easily gain further understanding from working through the worked examples which are set out in a step by step clearly fashion.
