The Diverted Dream Steven Brint, Jerome Karabel, 1989-09-07 In the twentieth century Americans have increasingly looked to the schools and in particular to the nation's colleges and universities as guardians of the cherished national ideal of equality of opportunity With the best jobs increasingly monopolized by those with higher education the opportunity to attend college has become an integral part of the American dream of upward mobility The two year college which now enrolls more than four million students in over 900 institutions is a central expression of this dream and its invention at the turn of the century constituted one of the great innovations in the history of American education By offering students of limited means the opportunity to start higher education at home and to later transfer to a four year institution the two year school provided a major new pathway to a college diploma and to the nation's growing professional and managerial classes But in the past two decades the community college has undergone a profound change shifting its emphasis from liberal arts transfer courses to terminal vocational programs Drawing on developments nationwide as well as in the specific case of Massachusetts Steven Brint and Jerome Karabel offer a history of community colleges in America explaining why this shift has occurred after years of student resistance and examining its implications for upward mobility As the authors argue in this exhaustively researched and pioneering study the junior college has always faced the contradictory task of extending a college education to the hitherto excluded while diverting the majority of them from the nation's four year colleges and universities Very early on two year college administrators perceived vocational training for semi professional work as their and their students most secure long term niche in the educational hierarchy With two thirds of all community college students enrolled in vocational programs the authors contend that the dream of education as a route to upward mobility as well as the ideal of equal

educational opportunity for all are seriously threatened With the growing public debate about the state of American higher education and with more than half of all first time degree credit students now enrolled in community colleges a full scale historically grounded examination of their place in American life is long overdue This landmark study provides such an examination and in so doing casts critical light on what is distinctive not only about American education but American society itself

Beyond College For All James E. Rosenbaum,2001-11-29 In a society where everyone is supposed to go to college the problems facing high school graduates who do not continue their education are often forgotten Many cannot find jobs and those who do are often stuck in low wage dead end positions Meanwhile employers complain that high school graduates lack the necessary skills for today s workplace Beyond College for All focuses on this crisis in the American labor market Around the world author James E Rosenbaum finds employers view high school graduates as valuable workers Why not here Rosenbaum reports on new studies of the interaction between employers and high schools in the United States He concludes that each fails to communicate its needs to the other leading to a predictable array of problems for young people in the years after graduation High schools caught up in the college for all myth provide little job advice or preparation leading students to make unrealistic plans and hampering both students who do not go to college and those who start college but do not finish Employers say they care about academic skills but then do not consider grades when deciding whom to hire Faced with few incentives to achieve many students lapse into precisely the kinds of habits employers deplore doing as little as possible in high school and developing poor attitudes Rosenbaum contrasts the situation in the United States with that of two other industrialized nations Japan and Germany which have formal systems for aiding young people who are looking for employment Virtually all Japanese high school graduates obtain work and in Germany eighteen year olds routinely hold responsible jobs While the American system lacks such formal linkages Rosenbaum uncovers an

encouraging hidden system that helps many high school graduates find work He shows that some American teachers particularly vocational teachers create informal networks with employers to guide students into the labor market Enterprising employers have figured out how to use these networks to meet their labor needs while students themselves can take steps to increase their ability to land desirable jobs Beyond College for All suggests new policies based on such practices Rosenbaum presents a compelling case that the problems faced by American high school graduates and employers can be solved if young people employers and high schools build upon existing informal networks to create formal paths for students to enter the world of work A Volume in the American Sociological Association's Rose Series in Sociology **Cases on**

Investing in People United States. Department of Labor. Commission on Workforce Quality and Labor Market Efficiency, 1989

Improving School-to-Work Transitions David Neumark, 2007-01-09 As anxieties about America's economic competitiveness mounted in the 1980s so too did concerns that the nation's schools were not adequately preparing young people for the modern workplace Spurred by widespread joblessness and job instability among young adults the federal government launched ambitious educational reforms in the 1990s to promote career development activities for students In recent years however the federal government has shifted its focus to test based reforms like No Child Left Behind that emphasize purely academic subjects At this critical juncture in education reform *Improving School To Work Transitions* edited by David Neumark weighs the successes and failures of the 90s era school to work initiatives and assesses how high schools colleges and government can help youths make a smoother transition into stable well paying employment Drawing on evidence from national longitudinal studies surveys interviews and case studies the contributors to *Improving School To Work Transitions* offer thought provoking perspectives on a variety of aspects of the school to work problem Deborah Reed Christopher Jepsen and Laura Hill emphasize the importance of focusing school to work programs on the diverse needs of different demographic groups particularly immigrants who represent a growing proportion of the youth population David Neumark and Donna Rothstein investigate the impact of school to work programs on the forgotten half students at the greatest risk of not attending college Using data from the 1997 National Longitudinal Study of Youth they find that participation by these students in programs like job shadowing mentoring and summer internships raise employment and college attendance rates among men and earnings among women In a study of nine high schools with National Academy Foundation career academies Terry Orr and her fellow researchers find that career academy participants are more engaged in school and are more likely to attend a four year college than their peers Nan Maxwell studies the skills demanded in entry level jobs and finds that many supposedly low skilled jobs actually demand

extensive skills in reading writing and math as well as the new basic skills of communication and problem solving Maxwell recommends that school districts collaborate with researchers to identify which skills are most in demand in their local labor markets At a time when test based educational reforms are making career development programs increasingly vulnerable it is worth examining the possibilities and challenges of integrating career related learning into the school environment Written for educators policymakers researchers and anyone concerned about how schools are shaping the economic opportunities of young people Improving School To Work Transitions provides an authoritative guide to a crucial issue in education reform
