Accessible Summary

What is known on the subject?

- To date, the majority of the research regarding innovative psychosocial interventions in psychiatry focuses upon the development and effectiveness of the interventions. Despite the fact that these are important clinical and scientific contributions, only a small percentage of the evidence-based interventions reach clinical practice.
- Cognitive Adaptation Training (CAT) is an effective psychosocial intervention to increase daily functioning and cognitive functioning in people diagnosed with severe mental illness (SMI) in inpatient and outpatient psychiatric care.
- Despite knowledge on the intervention's effectiveness, systematic use of CAT in the daily routine of mental health nurses is insufficient.

What the paper adds to existing knowledge?

- To date, no research is available that describes the factors associated to the implementation of CAT from a nursing perspective.
- This research also adds to the literature on rehabilitation in people diagnosed with SMI in an inpatient setting.
- The results contribute to the science of implementing interventions in long-term psychiatric care and may help future interventions in their implementation process.

What are the implications for practice?

- This study highlights that multiple factors need to be considered when implementing an intervention in routine care and that it is a complicated process.
- Future implementation initiatives require ongoing training and supervision of CAT specialists, appointment of local champions to increase commitment among nursing staff and inclusion and commitment of management to overcome organizational barriers.

This study is registered at the Netherlands Trial Register (identifier: NTR6006). Date registered: 12 February 2012.

Rehabilitation: Lessons from Chicago's Thresholds Program Jerry Dincin, 1995-12-27 There are three components in psychiatric rehabilitation: medication, the rehabilitation relationship, and rehabilitation program efforts. This volume deals with all three, assessing their importance and explaining how they can be integrated in comprehensive psychiatric rehabilitation. The example used throughout is the program approach at Thresholds, a Chicago-based agency for psychiatric rehabilitation. All the contributors have held important staff roles at Thresholds. This volume contains the contributors' current thoughts on psychiatric rehabilitation, illustrated by the story of how and why Thresholds operates as it does and how it arrived where it is today. This is the 68th issue of the quarterly journal *New Directions for Mental Health Services*. The Interactive World of Severe Mental Illness Diana J. Semmelhack, Larry Ende, Arthur Freeman, Clive Hazell, Colleen L. Barron, Garry L. Traft, 2015-07-03 In our society, medication is often seen as the treatment for severe mental illness, with psychotherapy a secondary treatment. However, quality social interaction may be as important for the recovery of those with severe mental illness as are treatments. This volume makes this point while describing the emotionally moving lives of eight individuals with severe mental illness as they exist in the U.S. mental health system. Offering social and psychological insight into their experiences, these stories demonstrate how patients can create meaningful lives in the face of great difficulties. Based on in-depth interviews with clients with severe mental illness, this volume explores which structures of interaction encourage growth for people with severe mental illness and which trigger psychological damage. It considers the clients' relationships with friends, family, peers, spouses, lovers, co-workers, mental health professionals, institutions, the community, and the society as a whole. It focuses specifically on how structures of social interaction can promote or harm psychological growth and how interaction dynamics affect the psychological well-being of individuals with severe mental illness.

Chronic Illness Ilene Morof Lubkin, 2006 The best-selling *Chronic Illness: Impact and Intervention* continues to focus on the various aspects of chronic illness that influence both patients and their families.
