organisation theory and business management *Multimodal Safety Management and Human Factors* Mr José M Anca Jr, 2012-10-01 Safety management and human factors disciplines are often regarded as subjective and nebulous. This perhaps stems from a variety of sometimes disparate activities in the realms of education, industry and research. Aviation is one of the safety critical industries that has led the development of safety systems and human factors. However, in recent years, safety management and human factors are seen to be progressing well in the road, rail and the medical arena. *Multimodal Safety Management and Human Factors* is a wide ranging compendium of contemporary approaches in the aviation, road, rail and medical domains. It brings together 28 chapters from both the academic and professional worlds that focus on applications, tools and strategies in safety management and human factors. It is a wellspring of the practical rather than the theoretical. Safety scientists, human factors industry practitioners, change management advocates, educators and students will find this book extremely relevant and challenging.

Improving Teamwork in Organizations Eduardo Salas, Clint A. Bowers, Eleana Edens, 2001-03-01 This edited volume applies the excellent work done in Crew Resource Management (CRM) in the aviation industry to training teams in other organizations. CRM is not only a design for training but it also has been evaluated over time and shown great success. This lesson should be transferred to other nonaviation settings and this book was written with that goal in mind. This book has two purposes. First, it provides those interested in designing and delivering resource management training with useful and practical information containing the latest thinking and guidance available. Second, it launches CRM training as a viable intervention that can be used to enhance teamwork and organizational effectiveness as well as minimize human error in a wide variety of industries and organizations. Written from experts in the field of training, this volume is organized into four sections that address the foundation of resource management training, focus on the tools needed for design and delivery of resource management training, apply resource management training to several industries and domains (i.e. medical, naval, airlines) and look at the global issues such as culture of organizations, national issues and error in training.
