The Ecocentrists Keith Makoto Woodhouse, 2018-06-05 Disenchanted with the mainstream environmental movement a new more radical kind of environmental activist emerged in the 1980s Radical environmentalists used direct action from blockades and tree sits to industrial sabotage to save a wild nature that they believed to be in a state of crisis Questioning the premises of liberal humanism they subscribed to an ecocentric philosophy that attributed as much value to nature as to people Although critics dismissed them as marginal radicals posed a vital question that mainstream groups too often ignored Is environmentalism a matter of common sense or a fundamental critique of the modern world In *The Ecocentrists* Keith Makoto Woodhouse offers a nuanced history of radical environmental thought and action in the late twentieth century United States Focusing especially on the group Earth First Woodhouse explores how radical environmentalism responded to both postwar affluence and a growing sense of physical limits While radicals challenged the material and philosophical basis of industrial civilization they glossed over the ways economic inequality and social difference defined people's different relationships to the nonhuman world Woodhouse discusses how such views increasingly set Earth First at odds with movements focused on social justice and examines the implications of ecocentrism's sweeping critique of human society for the future of environmental protection A groundbreaking intellectual history of environmental politics in the United States *The Ecocentrists* is a timely study that considers humanism and individualism in an environmental age and makes a case for skepticism and doubt in environmental thought

LePage,Christopher J. Williams,Hong Yang,2005-03-30 The plant fossil record indicates that the genus *Metasequoia* was widely distributed throughout the Northern Hemisphere from the early Late Cretaceous to the Plio Pleistocene Today the genus has shrunk to one species with approximately 5 000 mature individuals in southeastern China s Xiaohu Valley This book distills the current understanding of the biology ecology and physiology of fossil and living *Metasequoia* current research directions and problems that remain unresolved *Beyond Elemental Loss* Marjolein Oele,2025-04-01 Offers an important and innovative contribution to environmental philosophy by investigating loss in times of anthropogenic climate change through the elements of water fire air and earth *Beyond Elemental Loss* offers an important and innovative contribution to environmental philosophy by investigating loss in times of anthropogenic climate change

through the elements of water fire air and earth Marjolein Oele argues that the current experience of loss prompts a reassessment of the conventional meaning and conceptualization of loss She proposes that such loss is best understood through infinitesimal diachronic shifts occurring in the elemental constellations that structure the world water fire air and earth and humanity's incremental inability to cognitively and affectively make sense of this world increasingly transformed by anthropogenic forces Through a generous yet critical reading of a broad range of interdisciplinary sources tracing changes in our relationship to the elemental over time Oele's scholarship plumbs the history of philosophy as much as it pulls from Indigenous philosophies continental thought mythologies anthropological and historical sources science and ecology The book's argumentative arc ultimately directs our attention toward constructive transformations in our cognitive and affective habits and it argues that trust can bring us beyond elemental loss
