A. Oldeman, 1998 Life imprisons stress and puts it to work It often does so by symbiosis Struggle is a property of life This book presents Life as a struggle to bring the order of Mendel's Laws of heredity The physical world tends to run out of useful energy like an old fashioned clock The secret of Life is that it brings order where useful energy has gone by a process called adaptation This struggle of life so fashions biodiversity at all levels Many decades of long term experiments in test tubes long term study of oceans and climates and forest ecosystem research allowed the authors to compare adaptation of life from submicroscopic nucleotides to huge ecosystems The sun's atomic clock beats the rhythm of environmental stress Behaviour rhythm and architecture were studied and explained at all levels from molecule to plant or animal and to ecosystems All evolution in Life follows pathways of a few steps only joined by biological clasps A clasp is like a coded biological lock at the end of a chain A clasp opens or closes each half path around the DNA helix A meristem with leaf leaf plus opens or closes the pathway of shoot growth in plants a minimal axis allows or blocks branching perhaps homeotic genes in animals possess clasps Critical eco units stop or start ecosystem succession Adaptation to stress requires a change of the code of the lock that is a changed clasp and so produces new instructions for new adapted development Codes are changed by plasmid transfer in DNA meristem differentiation in plants selective activation of seeds and eggs in mini ecosystems The sheer number of processes causes development to be complex and fuzzy The struggle of Life has no mechanical precision It creates similar but not quite the same new unexpected diverse places for new diverse structures and organisms to grow Site web www.nhbs.com **California Coast Redwood (Sequoia Sempervirens (D.
