Thresher, 1980 **The Ecology of Deep and Shallow Coral Reefs**, 1983 Fish Behavior in the Aquarium and in the Wild Stephan Reefs, 2018-08-06 A home aquarium seems a peaceful place Gazing at its inhabitants as they swim slowly through their small universe is a soothing even hypnotic experience But this seeming tranquillity is only surface deep Like their wild counterparts these tiny glittering beings exhibit a wide array of fascinating behaviors St phan Reefs provides a delightfully entertaining yet scientifically grounded look at what fishes do and how they do it From defending their young to seeking out the perfect sexual partner to telling time fishes display a variety of behaviors that may not be readily apparent to the casual observer Reefs not only describes the behaviors but also outlines simple experiments that can be performed by observers wishing to learn for themselves just how resourceful and bizarre these creatures can be How Fish Behave introduces us to damselfishes that sing like birds elephantfishes that communicate electrically and sticklebacks that deceive other fish into believing they have found food Drawing on the experimental evidence behind such intrinsically interesting responses Reefs demonstrates how science is conducted in the field of animal behavior Reef Fish Behavior Ned DeLoach, 1999 An overview of what is presently known about the behavior and ecology of reef fishes in the thaters of Florida the Caribbean and the Bahamas *Marine Ornamental Species Aquaculture* Ricardo Calado, Ike Olivotto, Miquel Planas Oliver, G. Joan Holt, 2017-03-06 The global trade of aquatic organisms for home and public aquariums along with associated equipment and accessories has become a multi billion dollar industry Aquaculture of marine ornamental species still in its infancy is recognized as a viable alternative to wild collection as it can supplement or replace the supply of wild caught specimens and potentially help recover natural populations through restocking This book collects into a single work the most up to date information currently available on the aquaculture of marine ornamental species It includes the contributions of more than 50 leading scientists and experts on different topics relevant for the aquaculture of the most emblematic groups of organisms traded for reef aquariums From clownfish to angelfish tangs and seahorses as well as corals anemones shrimps giant clams and several other reef organisms all issues related with the husbandry breeding and trade are addressed with explanatory schemes and illustrations being used to help in understanding the most complex topics addressed Marine Ornamental Species Aquaculture is a key reference for scientists and academics in research institutes and universities public and private aquaria as well as for hobbyists Entrepreneurs will also find this book an important resource as the culture of marine ornamental species is analyzed from a business oriented perspective highlighting the risks and opportunities of commercial scale aquaculture of marine ornamentals **The Diversity of Fishes** Gene Helfman, Bruce B. The butterflyfishes: success on the coral reef Philip J. Motta, 2012-12-06 Butterflyfishes of the family Chaetodontidae are conspicuous members of almost all tropical reefs These colorful fishes have attracted a great deal of attention from both the scientific community and especially the aquarium fish industry At first one is tempted to say that butterflyfishes are abundant worldwide but the evidence does not support this statement The biomass of chaetodontids on reefs may range from 0.02 to 0.80% and in terms of numbers they comprise only 0.04 to 0.61 % of the individuals on the reef Yet in spite of these relatively small numbers they have been extensively studied A quick census shows some 170 articles on or about butterfly fishes with 78% of them being published since the 1970 s Along with the cichlids and damselfishes they might be one of the most studied and well published family of tropical fishes Why then have chaetodontids attracted so much attention The butterflyfishes are mostly shallow water inhabitants that are approachable and easily recognizable making their study very feasible Their bright coloration has provoked many hypotheses but has posed more questions about coloration than it has provided answers And despite their apparent overall morphological similarity their highly structured and varied social systems have made them an ideal model for such studies The reasons for choosing these organisms are indeed as diverse as the studies themselves
