What was the session about?	Today we learnt about power surrounding the law and criminology and how they ultimately link. We went into detail about different statuses in society and how people are treated differently in society because of things like class, ethnicity and gender. We watched a video that was explaining how poor the policing in India is because of the 'class' system and how many children go missing under horrific circumstances
How has this added to your knowledge of the topic?	This furthered my knowledge as I have learnt a lot about power statuses in society, and how different classes for example are treated differently to one another, especially when it comes to street crime against white collar crime.
How has this added to your skills development? Which skills have you used / developed?	My communication skills were improved in this session due to group work and as a result of this I also had to do a lot of note taking and researching methods as I had to do a lot of reading into this topic.
How can you follow-up on this topic, and continue to develop your skills?	I can follow up on this session by researching further and reading articles and things about it to further my understanding

A Roadmap for Transformative Science Teacher Leadership

Arthur Eisenkraft, 2025-02-12 This book is a comprehensive guide to an effective Science Education Fellowship SEF program. Spanning more than ten years and involving hundreds of teachers, District Science Coordinators, and university faculty, the Wipro SEF program has empowered teachers to become leaders who drive meaningful, sustainable change in their schools and districts without leaving the classroom. Offering an in-depth look at the SEF program's structure from its foundation in teacher leadership development to its innovative adaptations across seven universities and 35 school districts, the book presents a roadmap for implementing similar programs in other school districts, targeting teacher retention, teacher development, and fostering student growth. Readers will find detailed explanations of key program components and the vital roles of district science coordinators and higher education institutions. Through a mix of theoretical insights, practical strategies, and testimonials from program participants, the book provides a comprehensive model for educators, administrators, and university leaders who aspire to replicate or adapt the SEF program in their own contexts. Ideal for both educators and school administrators, this book will allow you to gain valuable insights into building and sustaining a program that empowers teacher leaders, drives district-wide transformation, and ultimately improves student outcomes in science education.

The Cognitive Enrichment Advantage Teacher Handbook Katherine H. Greenberg, 2005 The Cognitive Enrichment Advantage Teacher Handbook provides a theoretical framework teachers can use to help their students learn how to learn. It builds upon an open and safe classroom atmosphere where students are encouraged to focus on the process of learning at least as much as the product. The Handbook explains how teacher mediators employ guided discovery to help students socially construct a shared vocabulary as they focus on developing personal learning strategies. The approach is based upon theory and research showing how cognitive enrichment can help develop flexibility in thinking. This flexibility, together with an understanding of how feelings and motivation influence learning, can help every student become a more effective, life-long, independent, and interdependent learner. The approach has been used most often with marginalized students from preschool through adults in more than six countries.

Instrumentation and Control Systems William Bolton, 2004-06-03 In a clear and readable style, Bill Bolton addresses the basic principles of modern instrumentation and control systems, including examples of the latest devices, techniques, and applications. Unlike the majority of books in this field, only a minimal prior knowledge of mathematical methods is assumed. The book focuses on providing a comprehensive introduction to the subject, with Laplace presented in a simple and easily accessible form, complemented by an outline of the mathematics that would be required to progress to more advanced levels of study. Taking a highly practical approach, Bill Bolton combines underpinning theory with numerous case studies and applications throughout to enable the reader to apply the content directly to real-world engineering contexts. Coverage includes smart instrumentation, DAQ, crucial health and safety considerations, and practical issues such as noise reduction, maintenance, and testing. An introduction to PLCs and

ladder programming is incorporated in the text as well as new information introducing the various software programmes used for simulation Problems with a full answer section are also included to aid the reader s self assessment and learning and a companion website for lecturers only at <http://textbooks.elsevier.com> features an Instructor s Manual including multiple choice questions further assignments with detailed solutions as well as additional teaching resources The overall approach of this book makes it an ideal text for all introductory level undergraduate courses in control engineering and instrumentation It is fully in line with latest syllabus requirements and also covers in full the requirements of the Instrumentation Control Principles and Control Systems Automation units of the new Higher National Engineering syllabus from Edexcel Assumes minimal prior mathematical knowledge creating a highly accessible student centred text Problems case studies and applications included throughout with a full set of answers at the back of the book to aid student learning and place theory in real world engineering contexts Free online lecturer resources featuring supporting notes multiple choice tests lecturer handouts and further assignments and solutions
