Reflection Profiling Studies of the California Continental Borderland David G. Moore, 1969 **Reflection Profiling Studies of the California Continental Borderland** David G. Moore, 1972 Reflection Profiling Studies of the California Continental Borderland D. G. Moore, 1967 **Continental Margin Sedimentation** Charles A. Nittrouer, James A. Austin, Michael E. Field, Joseph H. Kravitz, James P. M. Syvitski, Patricia L. Wiberg, 2009-03-12 This volume on continental margin sedimentation brings together an expert editorial and contributor team to create a state of the art resource Taking a global perspective the book spans a range of timescales and content ranging from how oceans transport particles to how thick rock sequences are formed on continental margins Summarizes and integrates our understanding of sedimentary processes and strata associated with fluvial dispersal systems on continental shelves and slopes Explores timescales ranging from particle transport at one extreme to deep burial at the other Insights are presented for margins in general and with focus on a tectonically active margin northern California and a passive margin New Jersey enabling detailed examination of the intricate relationships between a wide suite of sedimentary processes and their preserved stratigraphy Includes observational studies which document the processes and strata found on particular margins in addition to numerical models and laboratory experimentation which provide a quantitative basis for extrapolation in time and space of insights about continental margin sedimentation Provides a research resource for scientists studying modern and ancient margins and an educational text for advanced students in sedimentology and stratigraphy **A Summary of Knowledge of the Southern California Coastal Zone and Offshore Areas: Physical environment** Southern California Ocean Studies Consortium, 1974 Evaluating Earthquake Hazards in the Los Angeles Region--an Earth-science Perspective Joseph I. Shokes,1977 **Deep-Water Turbidite Systems** Dorrik A. V. Stow,2009-04-15 This third volume in the IAS Reprint Series reviews some of the major contributions that have been made over the last twenty years to our understanding of deep water environments Few groups of rocks have received as much attention in recent years as deep sea sands and yet retained so many unsolved problems How far and how fast can sediment debris flows travel Do the many ancient series that have been interpreted as submarine fan deposits bear any resemblance to present day deep sea flows How valid are these sequences described as coarsening upward or fining upward and how should they be interpreted This timely review of contributions made to this area of study since 1970 reflects the heightened interest that has surrounded it Deep Water Turbidite Systems contains 22 papers reproduced in full and 22 abstracts of papers that have appeared in the journal Sedimentology concerned with the broad spectrum of topics within the field of turbidites and associated deep water systems If you are a member of the International Association of Sedimentologists for purchasing details please see <http://www.iasnet.org/publications/details.asp?code=RP3> Cyclic and Event Stratification G. Einsele,A. Seilacher,2012-12-06 **The Sedimentary Basins of the United States and Canada** Andrew Miall,2019-04-20 The Sedimentary Basins of the United States and Canada Second Edition focuses on the large regional sedimentary accumulations in Canada and the United States Each chapter provides a succinct summary of the tectonic setting and structural and paleogeographic evolution of the basin it covers with details on structure and stratigraphy The book features four new chapters that cover the sedimentary basins of Alaska and the Canadian Arctic In addition to sedimentary geologists this updated reference is relevant for basin analysis regional geology stratigraphy and for those working in the hydrocarbon exploration industry Features updates to existing chapters along with new chapters on sedimentary basins in Alaska and Arctic Canada Includes nearly 300 detailed full color paleogeographic maps Written for general geological audiences and individuals working in the resources sector particularly those in the fossil fuel industry Fjords James P.M. Syvitski,David C. Burrell,Jens M. Skei,2012-12-06 Fjords are both an interface and a buffer between glaciated continents and the oceans They exhibit a very wide range in environmental conditions both in dynamics and geography Some are truly wonders of the world with their dizzying mountain slopes rising sharply from the ocean edge Others represent some of the harshest conditions on earth with hurricane winds extremes in temperature and catastrophic earth and ice movements Fjords are unique estuaries and represent a large portion of the earth's coastal zone Yet they are not very well known given the increasing population and food pressures and their present industrial and strategic importance Temperate zone estuaries have had many more years of intense study with multiyear data available Most fjords have not been impacted by man but if history repeats itself that condition will not last long Fjords present some unique environmental problems such as their usually slow flushing time a feature common to many silled environments Thus there is presently a need for management

guidelines which can only be based on a thorough knowledge of the way fjords work Fjords are in many respects perfect natural oceanographic and geologic laboratories Source inputs are easily identified and their resulting gradients are well developed Throughout this book we emphasize the potential of modeling processes in fjords with comparisons to other estuary lake shelf and slope and open ocean environments
