Reflections On A Theory Of Organisms:

Reflections on a Theory of Organisms Walter M. Elsasser, 1987 Reflections on a Theory of Organisms Walter M. Elsasser, 1998-10-16 In a thought provoking and controversial work first published in 1987 eminent geophysicist Walter M. Elsasser argues that the behavior of living organisms cannot be reduced to physico chemical causality Suggesting that molecular biology today is at the same point as Newtonian physics on the eve of the quantum revolution Elsasser lays the foundation for a theoretical biology that points the way toward a natural philosophy of organic life **Extreme Events in Nature and Society** Sergio Albeverio, Volker Jentsch, Holger Kantz, 2006-02-18 Significant and usually unwelcome surprises such as floods financial crisis epileptic seizures or material rupture are the topics of Extreme Events in Nature and Society The book authored by foremost experts in these fields reveals unifying and distinguishing features of extreme events including problems of understanding and modelling their origin spatial and temporal extension and potential impact The chapters converge towards the difficult problem of anticipation forecasting the event and proposing measures to moderate or prevent it Extreme Events in Nature and Society will interest not only specialists but also the general reader eager to learn how the multifaceted field of extreme events can be viewed as a coherent whole **God and Gravity** Philip

Clayton, 2018-08-23 Philip Clayton is well known as a major thinker working at the interface of science philosophy and Christian theology Here for the first time a representative selection of his far reaching works have been brought together into one place After a general introduction to the breadth of Clayton s writing the book is divided into six main sections 1 Science 2 Science Faith 3 Panentheistic Reflections on Science 4 Science 5 Science Spirit and 6 Progressive Theology This introduction and reader will become the go to text for all inquiries regarding Philip Clayton s expansive theology

Biocivilisations Predrag B. Slijepcevic, 2023-05-18 2024 Nautilus Book Award Gold Medal Winner Restorative Earth Practices A brilliant book that shows a way out of the destructive trap of Anthropocentric arrogance Vandana Shiva author of Terra Viva An unusually thought provoking and ambitious book Dr James A Shapiro author of Evolution A View from the 21st Century Biocivilisations is an important original rethinking of the mystery of life and its deep uncertainty exploring the complex civilisations that existed on Earth long before humans What is life Many scientists believe life can be reduced to mechanistic factors such as genes and information codes Yet there is a growing army of scientists philosophers and artists who reject this view The gene metaphor is not only too simplistic but deeply misleading If there is a way to reduce life to a single principle that principle must acknowledge the creativity of life turning genetic determinism on its head The term biocivilisations is the acknowledgement of this uncertainty of life as opposed to a quasi certainty of the human position governed by a narrow time window of the scientific revolution Life existed without humans for more than 99.99 percent of the Earth s existence Life will also continue without humans long after our inevitable extinction In Biocivilisations Dr Predrag Slijepcevic shows how bacteria amoebas plants insects birds whales elephants and countless other species not only preceded

human beings but demonstrate elements of how we celebrate human civilisation complex communication agriculture science art medicine and more Humans must try to adopt this wisdom from other biocivilisations that have long preceded our own By rethinking the current scientific paradigm Dr Slijep evi makes clear that a transformation from a na ve young species into a more mature species in tune with its surroundings will save us from our own violence and the violence we inflict on the rest of our living planet Read this book if you would like to understand the intelligence of living systems Dr Denis Noble

University of Oxford **Back To Darwin** John B. Cobb,2008-02-04 This book provides a distinctive radical way beyond the quarrels between evolutionary science and Christian belief Leading scientists philosophers and theologians critically discuss the metaphysical assumptions of neo Darwinism and offer concrete ways of broadening mainstream evolutionary theory Their open exchange moderated by veteran process theologian John B Cobb presents a holistic case for evolution that both theists and nontheists can accept Contributors Francisco J Ayala Ian G Barbour Charles Birch Philip Clayton John B Cobb Jr John Greene David Ray Griffin A Y Gunter John F Haught Lynn Margulis Reg Morrison Dorion Sagan Jeffrey Schloss Robert J Valenza Howard J Van Till *Functions: From Organisms to Artefacts* Jean Gayon,Armand de Ricqlès,Antoine C.

Dussault,2023-07-25 This book originally published in French examines the philosophical debates on functions over the last forty years and proposes new ways of analysis Pervasive throughout the life sciences the concept of function has the air of an epistemological scandal ascribing a function to a biological structure or process amounts to suggesting that it is explained by its effects This book confronts the debates on function with the use of the notion in a wide range of disciplines such as biology psychology and medicine It also raises the question of whether this notion which is as old in the history of technology as it is in the life sciences has the same meaning in these two domains *Semiotica* ,1999 **Theological Reflections at**

the Boundaries Paul O. Ingram,2011-11-04 The interdependence of boundary questions and the experience of cognitive dissonance reveal that knowledge in all fields of inquiry is always incomplete and tentative The issues are particularly acute for Christian theological reflection Ingram illustrates the importance of boundary questions and cognitive dissonance as a means of creatively transforming contemporary Christian theological reflection through dialogue with the natural sciences and the world s religions particularly Buddhism filtered through the lenses of Whiteheadian process philosophy *A Critical*

Reflection on Automated Science Marta Bertolaso,Fabio Sterpetti,2020-02-05 This book provides a critical reflection on automated science and addresses the question whether the computational tools we developed in last decades are changing the way we humans do science More concretely Can machines replace scientists in crucial aspects of scientific practice The contributors to this book re think and refine some of the main concepts by which science is understood drawing a fascinating picture of the developments we expect over the next decades of human machine co evolution The volume covers examples from various fields and areas such as molecular biology climate modeling clinical medicine and artificial intelligence The explosion of technological tools and drivers for scientific research calls for a renewed understanding of the human character

of science This book aims precisely to contribute to such a renewed understanding of science *The Oxford Handbook of English Prose 1500-1640* Andrew Hadfield, 2013-07-04 The Oxford Handbook of English Prose 1500 1640 is the only available overview of early modern English prose writing It considers the range and variety of the substance and types of English prose and also analyses the forms and styles of writing adopted in the early modern period *Encyclopedia of Geomagnetism and Paleomagnetism* David Gubbins, Emilio Herrero-Bervera, 2007-07-19 This reference encompasses the fields of Geomagnetism and Paleomagnetism in a single volume Both sciences have applications in navigation in the search for minerals and hydrocarbons in dating rock sequences and in unraveling past geologic movements such as plate motions they have contributed to a better understanding of the Earth The book describes in fine detail the current state of knowledge and provides an up to date synthesis of the most basic concepts It is an indispensable working tool not only for geophysicists and geophysics students but also for geologists physicists atmospheric and environmental scientists and engineers

James Wells, 2000 **Unity and Disunity in Evolutionary Biology** Richard G. Delisle, Maurizio Esposito, David Ceccarelli, 2024-09-02 It is not uncommon to see in major areas of research concerned with science that historical studies are accompanied by the rise of complementary or contradictory historiographies With time it seems scholars discover new approaches to study topics thus questioning old concepts traditions periodizations and historical labels Apparently this has not been the case in evolutionary thought In that area the main historiographic labels such as Darwinian Revolution Eclipse of Darwinism and Modern Synthesis have been in place and largely uncontested for about 50 years Such labels seem to work as irrefutable and often hidden premises of many historical reconstructions philosophical analyses and scientific conceptualizations This volume aims to move beyond this state of affair opening new thinking avenues by revisiting the traditional historiography and laying the groundwork for establishing a new historiography that considers the intertwined threads that compose evolutionary biology Notably evolutionary studies seem to have been marked by the tension between unification attempts and the proliferation of approaches methodologies and styles of thinking As the contributors to this volume illustrate research traditions branched off throughout the history of evolutionary thought before and after Charles Darwin The resulting complexity challenges traditional thinking categories throwing a somewhat different light on a more recent label like the Extended Evolutionary Synthesis More than 40 years after the now classic *The Evolutionary Synthesis Perspectives on the Unification of Biology* 1980 edited by Ernst Mayr and William Provine the contributors to this volume aim to reevaluate where evolutionary biology stands today *The Cumulative Book Index* ,1999 [The Practice Turn in Contemporary Theory](#) Karin Knorr Cetina, Theodore R. Schatzki, Eike von Savigny, 2005-06-20 This is the first volume to bring together philosophers sociologists and scientists to explore and examine the role of practices in human activity
