Radiation Phenomena In Plasmas Toshiro Ohnuma, 1994-12-16 In this book various antennae in plasmas particle beam antennae phase group and ray velocity surfaces of various plasma modes RF ray trajectories and wave fronts in inhomogeneous anisotropic plasmas plasma waveguides radiations in ion beams and plasma streams and useful kinetic plasma dielectric tensor are illustrated with many interesting new phenomena in anisotropic plasmas Many theoretical and experimental results are demonstrated with clearly understandable figures In addition to these fields the properties of superconducting plasmas are also presented Results from radiation phenomena in various schemes are shown and they can be applied in many fields e g space plasma sciences artificial satellites in space RF heatings of plasmas and advanced processing plasmas Fundamental anisotropic phenomena in anisotropic plasmas are also expected to be applicable in other anisotropic media such as anisotropic optical fibers

Semiconductor Optics Claus F. Klingshirn, 2007-03-07 The updated and enlarged new edition of this book provides an introduction to and an overview of semiconductor optics from the IR through the visible to the UV It includes coverage of linear and nonlinear optical properties dynamics magneto and electrooptics high excitation effects some applications experimental techniques and group theory The mathematics is kept as elementary as possible The subjects covered extend from physics to materials science and optoelectronics New or updated chapters add coverage of current topics while the chapters on bulk materials have been revised and updated

Physical Acoustics M.A. Breazeale, O. Leroy, 2012-12-06 This book contains 17 invited papers and 80 communicated papers presented at the International Symposium on Physical Acoustics held at the University Campus of Kortrijk Belgium from 19 22 June 1990 The twenty fifth anniversary of the Campus was celebrated with special activities such as concerts exhibitions and scientific meetings This symposium was a part of the celebration The 120 participants came from 18 different countries Among the largest groups we mention 32 French contributions and 19 contributions from the U S S R We especially thank Prof V V Proklov from Moscow and Prof S V Kulakov from Leningrad who helped us with the distribution of invitations in the U S S R We also thank Prof G Quentin and Ir B Poiree from Paris who endeavoured to inform all French acousticians We thank all the lecturers for their effort in producing the material for the book in time The invited lectures have been collected and retyped by Prof M Breazeale U S A while the contributed papers were collected by Prof O Leroy and retyped in Belgium The first 200 pages of the book comprise the invited lectures not classified by topic but are in alphabetical order with reference to the first author The second part of the book contains the contributed papers and posters also classified in alphabetical order according to the first author

Hollow Core Optical Fibre Based Gas Discharge Laser Systems Adrian Love, 2018-06-18 The research in this book represents the culmination of a drive to build the first discharge gas laser unencumbered by the effects of diffraction This breakthrough has been achieved through careful implementation of a discharge within a hollow core optical fibre and by developing measurement and analysis techniques to demonstrate laser

action in an experimental optical cavity Gas lasers were amongst the earliest laser types to be demonstrated and commercialised but it was recognised that noble gas lasers were limited by the minimum bore diameter of the laser tube which is set by diffraction The advent in 2011 of hollow optical fibres with optical and physical properties suitable for gas discharge lasers opened up the opportunity to break this diffraction limit Using a mixture of helium and xenon gas lasing in the mid infrared range was achieved using a 100 m core flexible hollow optical fibre which at 1m long is several hundred times the diffraction limited Rayleigh length **Antenna Handbook** Y.T. Lo,S.W Lee,S. W. Lee,1993-10-31 Technology has advanced to such a degree over the last decade that it has been almost impossible to find up to date coverage of antennas Antenna Handbook edited by two of the world s most distinguished antenna specialists presents the most advanced antenna theory and designs and demonstrates their application in a wide variety of technical fields They offer a staggering amount of in depth data and analysis on a wide range of topics supported by formulas curves and results as well as derivations
