Reforming Welfare by Rewarding Work Dave Hage, 2004 **Welfare Reform** United States. Congress. Senate. Committee on Finance, 2010 **Restoring Opportunity** Greg J. Duncan, Richard J. Murnane, 2014-01-01 In this landmark volume Greg J Duncan and Richard J Murnane lay out a meticulously researched case showing how in a time of spiraling inequality strategically targeted interventions and supports can help schools significantly improve the life chances of low income children The authors offer a brilliant synthesis of recent research on inequality and its effects on families children and schools They describe the interplay of social and economic factors that has made it increasingly hard for schools to counteract the effects of inequality and that has created a widening wedge between low and high income students Restoring Opportunity provides detailed portraits of proven initiatives that are transforming the lives of low income children from prekindergarten through high school All of these programs are research tested and have demonstrated sustained effectiveness over time and at significant scale Together they offer a powerful vision of what good instruction in effective schools can look like The authors conclude by outlining the elements of a new agenda for education reform Restoring Opportunity is a crowning contribution from these two leading economists in the field of education and a passionate call to action on behalf of the young people on whom our nation s future depends Copublished with the Russell Sage Foundation

The Budget of the United States Government United States, 1998 **Budget of the United States Government, Fiscal Year 1997** States United, Int, 1996-02 **Congressional Record** United States. Congress, 1996 **Learning More from Social Experiments** Howard S. Bloom, 2005-06-10 Policy analysis has grown increasingly reliant on the random assignment experiment a research method whereby participants are sorted by chance into either a program group that is subject to a

government policy or program or a control group that is not. Because the groups are randomly selected they do not differ from one another systematically. Therefore any differences between the groups at the end of the study can be attributed solely to the influence of the program or policy. But there are many questions that randomized experiments have not been able to address. What component of a social policy made it successful? Did a given program fail because it was designed poorly or because it suffered from low participation rates? In *Learning More from Social Experiments*, editor Howard Bloom and a team of innovative social researchers profile advancements in the scientific underpinnings of social policy research that can improve randomized experimental studies. Using evaluations of actual social programs as examples, *Learning More from Social Experiments* makes the case that many of the limitations of random assignment studies can be overcome by combining data from these studies with statistical methods from other research designs. Carolyn Hill James Riccio and Bloom profile a new statistical model that allows researchers to pool data from multiple randomized experiments in order to determine what characteristics of a program made it successful. Lisa Gennetian Pamela Morris Johannes Bos and Bloom discuss how a statistical estimation procedure can be used with experimental data to single out the effects of a program's intermediate outcomes, e.g. how closely patients in a drug study adhere to the prescribed dosage on its ultimate outcomes, the health effects of the drug. Sometimes a social policy has its true effect on communities and not individuals such as in neighborhood watch programs or public health initiatives. In these cases researchers must randomly assign treatment to groups or clusters of individuals but this technique raises different issues than do experiments that randomly assign individuals. Bloom evaluates the properties of cluster randomization, its relevance to different kinds of social programs and the complications that arise from its use. He pays particular attention to the way in which the movement of individuals into and out of clusters over time complicates the design, execution and interpretation of a study. *Learning More from Social Experiments* represents a substantial leap forward in the analysis of social policies. By supplementing theory with applied research examples, this important new book makes the case for enhancing the scope and relevance of social research by combining randomized experiments with non experimental statistical methods and it serves as a useful guide for researchers who wish to do so.
