The Bioethics of Regenerative Medicine King-Tak IP, 2008-12-24 Regenerative medicine is rich with promethean promises The use of human

embryonic stem cells in research is justified by its advocates in terms of promises to cure a wide range of diseases and disabilities from Alzheimer's and Parkinsonism to the results of heart attacks and spinal cord injuries. More broadly there is the promethean allure of being able to redesign human biological nature in terms of the goals and concerns of humans. Needless to say these allures and promises have provoked a wide range of not just moral but metaphysical reflections that reveal and reflect deep fault lines in our cultures. The essays in this volume directly and indirectly present the points of controversy as they tease out the character of the moral issues that confront any attempt to develop the human regenerative technologies that might move us from a human to a post human nature. Although one can appreciate the disputes as independently philosophical they are surely also a function of the conflict between a Christian and a post Christian culture in that Christianity has from its beginning recognized a fundamental prohibition against the taking of early human life. Even the philosophical disputes that frame secular bioethics are often motivated and shaped by these background cultural conflicts. These essays display this circumstance in rich ways.

Regenerative Medicine Ethics Linda F. Hogle, 2013-11-19 This book puts the ethics policy and politics of stem cells into context in a way that helps readers understand why past and current issues have developed the way they have and what the implications are for their work going forward. It also addresses emerging issues as the field progresses towards clinical and industrial uses. While there is a superabundance of material on the ethics of embryo use and questions of embryonic personhood there is little that covers what practicing scientists and managers need to know in order to plan and execute responsible research. Furthermore researchers funded by the NIH are required to have ethics training as a condition of the grant. As such this book is an essential resource to all of these pre professional students whether they plan to move into industry government or academia.
