Proceedings of ELM 2018 Jiuwen Cao, Chi Man Vong, Yoan Miche, Amaury Lendasse, 2019-06-29 This book contains some selected papers from the International Conference on Extreme Learning Machine 2018 which was held in Singapore November 21-23 2018 This conference provided a forum for academics researchers and engineers to share and exchange R D experience on both theoretical studies and practical applications of the ELM technique and brain learning Extreme Learning Machines ELM aims to enable pervasive learning and pervasive intelligence As advocated by ELM theories it is exciting to see the convergence of machine learning and biological learning from the long term point of view ELM may be one of the fundamental learning particles filling the gaps between machine learning and biological learning of which activation functions are even unknown ELM represents a suite of machine and biological learning techniques in which hidden neurons need not be tuned inherited from their ancestors or randomly generated ELM learning theories show that effective learning algorithms can be derived based on randomly generated hidden neurons biological neurons artificial neurons wavelets Fourier series etc as long as they are nonlinear piecewise continuous independent of training data and application environments Increasingly evidence from neuroscience suggests that similar principles apply in biological learning systems ELM theories and algorithms argue that random hidden neurons capture an essential aspect of biological learning mechanisms as well as the intuitive sense that the efficiency of biological learning need not rely on computing power of neurons ELM theories thus hint at possible reasons why

the brain is more intelligent and effective than current computers The main theme of ELM2018 is Hierarchical ELM AI for IoT Synergy of Machine Learning and Biological Learning This book covers theories algorithms and applications of ELM It gives readers a glance at the most recent advances of ELM
